

Situation of 29 March 2017 edition of the hours 14-next update 31-03-2017 hours 14, forecaster: LL

reliability: 90%

In the warm hours of the day possible real eases from very steep slopes.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2600 m
T.average 1000: 11 °C
T.average 2000: 4 °C

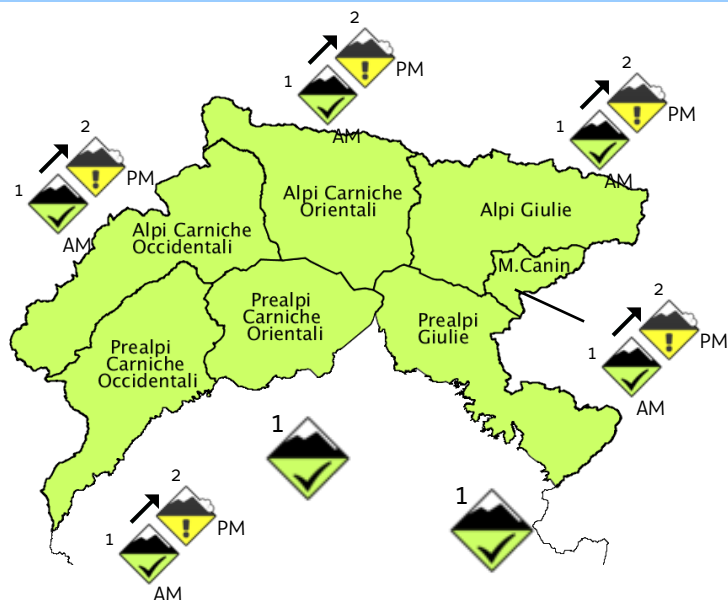

Weather by OSMER - ARPA FVG:
Clear or partly cloudy sky.

| Station | quota (m) | snow depth (cm) | fresh snow (cm) | Tmin (°C) | Tmax (°C) |
|-----------------------|-----------|-----------------|-----------------|-----------|-----------|
| RIFUGIO TAMAI - | 1750 | 14 | 0 | 2 | 12 |
| VARMOST M.TE SIMONE | 1870 | 14 | 0 | 3 | 12 |
| SELLA NEVEA - LIVINAL | 1837 | 133 | 0 | 3 | 10 |
| PIANCAVALLO | 1280 | 0 | 0 | 4 | 11 |
| TARVISIO | 800 | 0 | 0 | -1 | 19 |

Snow cover conditions and avalanche danger: Although daily temperatures are high, the clear nights lead to the formation of melt-freeze crusts on slopes with snow in the morning, so the snowpack is stable and well-consolidated in the morning. During the warm hours around midday, the sun leads to melting and possible isolated releases of humid or wet snow from steepest sunny slopes and under rocks. Forecast danger level: 1 (low) throughout the territory.

Forecast for Thursday 30 March 2017, reliability: 80%

In the warm hours of the day possible real eases from very steep slopes.

Alpi Carniche occ., Prealpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche orient., Prealpi Giulie

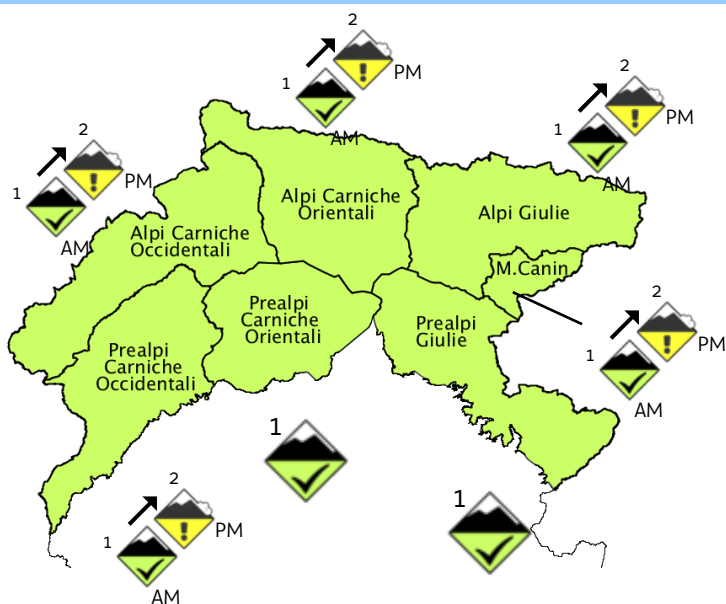

Thermal Zero: 2600 m
T.average 1000: 11 °C
T.average 2000: 5 °C

Weather by OSMER - ARPA FVG:
Partly cloudy.

Snow cover conditions and avalanche danger: Partly cloudy. The snowpack will always be characterised by generally load-bearing melt-freeze crusts in the morning. From midday non-isolated releases of humid or wet snow may occur especially on sunny very steep aspects, under rocks and walls. In the same conditions triggering of surface layers of humid or wet snow will be possible when transiting on skis. Forecast danger level: 1 (low) in the morning increasing to 2 (moderate) from the afternoon on the Giulie and Carniche Alps and Western Carniche Prealps, 1 (low) on the Giulie and Eastern Carniche Prealps.

Forecast for Friday 31 March 2017, reliability: 80%

In the warm hours of the day possible real eases from very steep slopes.

Alpi Carniche occ., Prealpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 2900 m
T.average 1000: 11 °C
T.average 2000: 3 °C

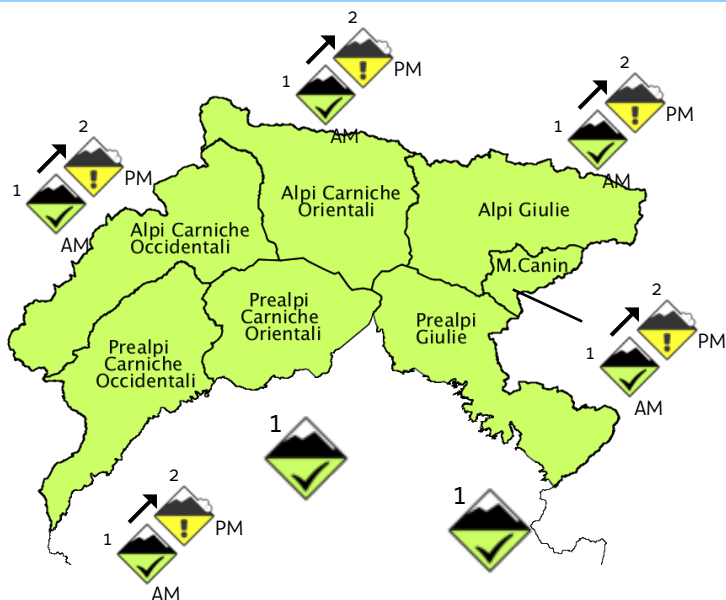

Weather by OSMER - ARPA FVG:

Generally variable with higher humidity as compared to the past days.

Snow cover conditions and avalanche danger: Variable sky with zero-degree line at 2900 m. The night before will be partly cloudy, so the snowpack will be characterised by generally load-bearing melt-freeze crusts in the morning. From the late morning non-isolated releases of humid or wet snow will be possible due to the warm temperatures, especially on very steep aspects, under rocks and walls. In the same conditions triggering of surface layers of humid or wet snow will be possible when transiting on skis. Forecast danger level: 1 (low) in the morning increasing to 2 (moderate) from the late morning on the Giulie and Carniche Alps and Western Carniche Prealps, 1 (low) on the Giulie and Eastern Carniche Prealps.

Forecast for Saturday 01 April 2017, reliability: 60%

In the warm hours of the day possible real eases from very steep slopes.

Alpi Carniche occ., Prealpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 2500 m
T.average 1000: 9 °C
T.average 2000: 2 °C

Weather by OSMER - ARPA FVG:

Generally cloudy with rare short precipitations.

Snow cover conditions and avalanche danger: Variable sky also during the night. So freezing during the night will not form melt-freeze crusts. Since they will not be present in the morning, melting will already begin in the late morning, so non-isolated releases of humid or wet snow will be possible, especially on very steep aspects, under rocks and walls. In the same conditions triggering of surface layers of humid or wet snow will be possible when transiting on skis. Forecast danger level: 1 (low) in the morning increasing to 2 (moderate) from mid-morning on the Giulie and Carniche Alps and Western Carniche Prealps, 1 (low) on the Giulie and Eastern Carniche Prealps.
