**Snow cover conditions and avalanche danger:** Fair weather and spring-like temperatures, led to the snowpack being present almost only to the N, except for very little snow along couloirs on the main mountain groups such as Canin, Montasio and Coglians. The snowpack on the Prealps is discontinuous also to the N. Snow, if present, is stable and well-consolidated. Small releases are possible only during the warmest hours, when superficial layers tend to melt. Current danger level: 1 (low) throughout the mountain territory.
