Snow cover conditions and avalanche danger: The snowpack, if present, is characterised by frozen surface layers. The little new snow fallen during the week has been carried by the wind, which formed small unstable accumulations in couloirs and bowls. Therefore, especially to the N above 1900-2000 m, triggering of snow drift accumulations may lead to dangerous falls. Widespread danger on very steep frozen aspects. Forecast danger level: 1 (low) on the Carniche and Giulie Alps. No avalanche danger on the Prealps.

Weather by OSMER - ARPA FVG:
Mainly partly cloudy or veiled sky;
frosts in the valleys will be likely.

Snow cover conditions and avalanche danger: Partly cloudy sky and generally stable and well consolidated snowpack. Slightly increasing temperatures with zero-degree line at 2200 m. Caution is to be exerted on very steep frozen aspects where dangerous falls may occur; caution also where recent small snowdrift accumulations are present, especially to the N above 1900-2000 m, as they may easily lead to releases. Forecast danger level: 1 (low) on the Carniche and Giulie Alps. No avalanche danger on the Prealps.

T.average 2000: 1 °C

Weather by OSMER - ARPA FVG:

Overcast on the mountains with scattered rainfalls, more likely on the Prealps and to the E towards the evening.

Snow cover conditions and avalanche danger: Cloudy with widespread precipitations, especially from the evening with snow above 2000 m. Slightly increasing temperatures with zero-degree line at 2300 m and SW wind (50 k/h). Danger due to dangerous falls is present especially on frozen slopes. From Tuesday, 26th, new considerable precipitations will be possible, which will lead to a higher avalanche danger. Forecast danger level: 1 (low) on the Carniche and Giulie Alps. No avalanche danger on the Prealps.
