

Situation of 26 April 2017 edition of the hours 14-next update 28-04-2017 hours 14, forecaster: GA

reliability: 70%

**New snowfall above 2000 m will increase avalanche danger above that altitude.**

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

SW 70 km/h  
T max

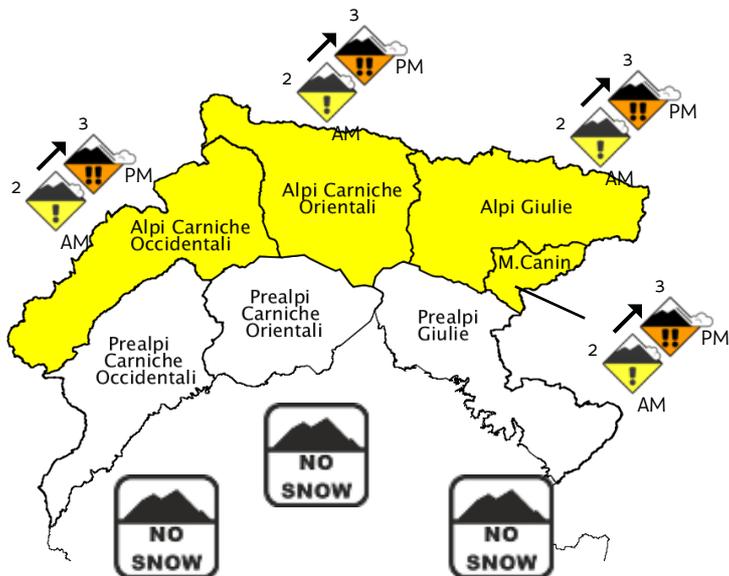

**Weather by OSMER - ARPA FVG:**  
Perturbations with abundant to locally intense precipitations. Snow level above approx. 2000 m.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI -	1750	0	0	2	3
VARMOST M.TE SIMONE	1870	0	0	1	3

PIANCAVALLO	1280	0	0	4	7
TARVISIO	800	0	0	11	13

**Snow cover conditions and avalanche danger:** Intense perturbation in the region. From the afternoon/evening intense snowfalls are expected above 2000 m on the Alps (approx. 40-60 cm of new snow) above that altitude; possibly more snow in the Canin area. The strong S winds will form new accumulations, especially on S slopes. New snow will lay down directly on the ground on S slopes, and on old well-consolidated snow on N slopes. From the evening: Spontaneous loose snow avalanches, locally of medium-size, may be possible above 2000 m and along very steep usual routes and walls. Above 2000 m slab triggering may occur locally also with light overload. Forecast danger level: 2 (moderate) on the Carniche and Giulie Alps, no danger on the Prealps.

Forecast for Thursday 27 April 2017, reliability: 60%

**Perturbations. Possible natural avalanches and triggering also of medium size.**

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

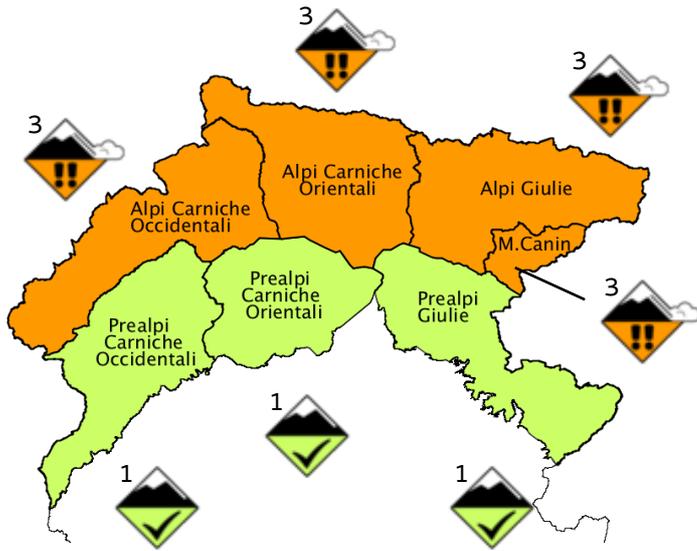

SW 60 km/h  
T max

**Weather by OSMER - ARPA FVG:**  
Intense to locally highly intense precipitations on the Giulie Prealps. Snow above 2000 m.

**Snow cover conditions and avalanche danger:** Still bad weather with heavy precipitations and increase in temperatures. Snow level and amount of new snow are difficult to define. Snowfalls may occur above 2000-2200 m on the Alps and 40-50 cm of new snow may fall; more snow on the Canin. Avalanche danger will be on the rise. Above 2000-21000 m wet or humid snow releases, also of medium size, both of loose snow and slabs, may be possible along the usual routes and walls. Avalanches may occur in areas where snow is not present and which are some hundred meters below release areas, especially in the Canin area. Above 2000 m slab triggering may occur also with light overload. Forecast danger level: 2 (moderate) rising to 3 (considerable) on the Carniche and Giulie Alps. No avalanche danger on the Prealps.

Forecast for Friday 28 April 2017, reliability: 60%

**Perturbations. Possible natural avalanches and triggering also of medium size.**

Heavy rainfalls in the morning. Less snow down to 1500 m. Variable with local precipitations in the

**Snow cover conditions and avalanche danger:** Still bad weather with heavy precipitations and decrease in temperatures. Snow till approx. 1500 m (20-40 cm); more snow may falls in the Canin area. Spontaneous loose snow and slab avalanches, also of medium-size, may be possible above 1800-2000 m and along very steep usual routes and walls. Higher avalanche danger on the Canin. On the Alps, above 1800 m, slab triggering may occur also with light overload. Possible releases and small avalanches from walls and the steepest couloirs on the Prealps. Forecast danger level: 3 (considerable) on the Carniche and Giulie Alps, 1 (low) on the Prealps.

Forecast for Saturday 29 April 2017, reliability: 60%

**On the Alps natural avalanches and triggering, also of medium size, may be possible.**

Thermal Zero: 1900 m  
T.average 1000: 6 °C  
T.average 2000: -1 °C

**Weather by OSMER - ARPA FVG:**  
Partly cloudy to variable with possible local rainfalls or showers.

**Snow cover conditions and avalanche danger:** Fairer weather with increasing temperatures. Local residual snowfalls may be possible above 1200 m. The new snow fallen in the past days at altitude may be unstable and not well-consolidated, which will favour spontaneous releases on the Alps, locally also of medium-size, especially during the warmest hours and above 1800-2000 m. The triggering of slabs in accumulation areas above 1800-2000 m on the Alps may be of medium size and will be possible also with low overload. Releases and small avalanches from walls and the steepest couloirs will be possible on the Prealps, where the amount of snow is little. Forecast danger level: 3 (considerable) on the Carniche and Giulie Alps, 1 (low) on the Prealps.
