

Situation of 28 April 2017 edition of the hours 14-next update 02-05-2017 hours 14, forecaster: GA

reliability: 70%

On the Alps natural avalanches and triggering, also of medium size, may be possible.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 1700 m
T.average 1000: 4 °C
T.average 2000: -2 °C

Weather by OSMER - ARPA FVG:

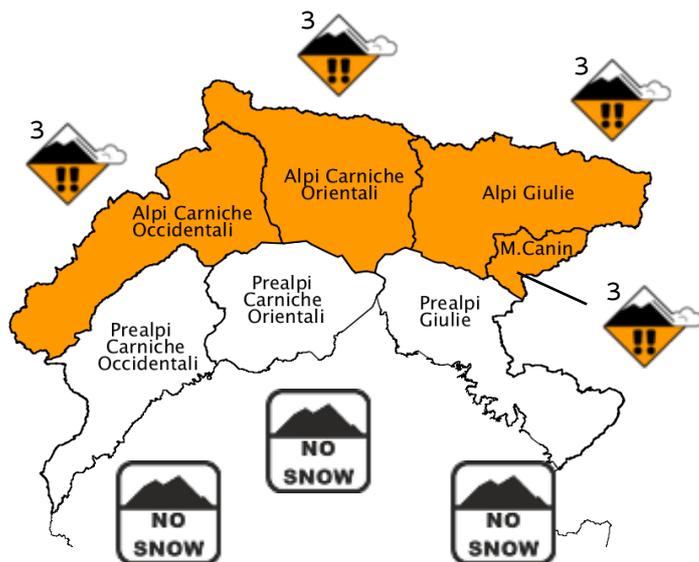

Variable with possible light precipitations to the E. Snow level above approx. 1600 m.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI -	1750	0	0	2	5
VARMOST M.TE SIMONE	1870	2	2	1	5
SELLA NEVEA - LIVINAL	1837	105	3	1	4
PIANCAVALLO	1280	0	0	4	9
TARVISIO	800	0	0	6	11

Snow cover conditions and avalanche danger: The heavy snowfalls of previous days have brought a great deal of rain. Snow only above 2200-2300 m. No information about the amount of snow fallen at altitude. Below the snow level, rain has made considerably heavier the old snowpack, if present. Above 2000-21000 m wet or humid snow releases, also of medium size, both of loose snow and slabs, may be possible along the usual routes and walls. Avalanches may occur in areas where snow is not present and which are some hundred meters below release areas, especially in the Canin area. Above 2000 m slab triggering may occur also with light overload. Forecast danger level: 3 (considerable) on the Carniche and Giulie Alps, above 2000 m. No avalanche danger on the Prealps.

Forecast for Saturday 29 April 2017, reliability: 70%

On the Alps natural avalanches and triggering, also of medium size, may be possible.

Thermal Zero: 1800 m
T.average 1000: 6 °C
T.average 2000: -2 °C

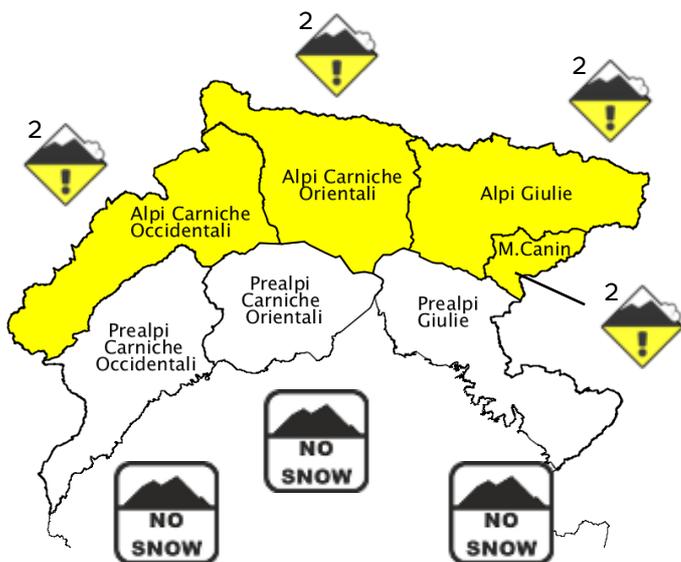

Weather by OSMER - ARPA FVG:

Variable in the morning, partly cloudy during the day.

Snow cover conditions and avalanche danger: Cloudy sky and zero-degree line at 1800 m. Above 2000-2200 m new snow is not consolidated yet. Above 2000-21000 m loose snow and slabs releases, also of medium size, may be possible along the usual routes and walls. Cross releases will be possible locally, especially on S slopes and during the warmest hours, due to the expected sunshine. Avalanches may occur in areas where snow is not present and which are some hundred meters below release areas, especially in the Canin area. Above 2000 m slab triggering may occur also with light overload, especially at the highest altitudes. Forecast danger level: 3 (considerable) on the Carniche and Giulie Alps, above 2000 m. No avalanche danger on the Prealps.

Forecast for Sunday 30 April 2017, reliability: 70%

Possible natural avalanches and triggering locally also with low overloading.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

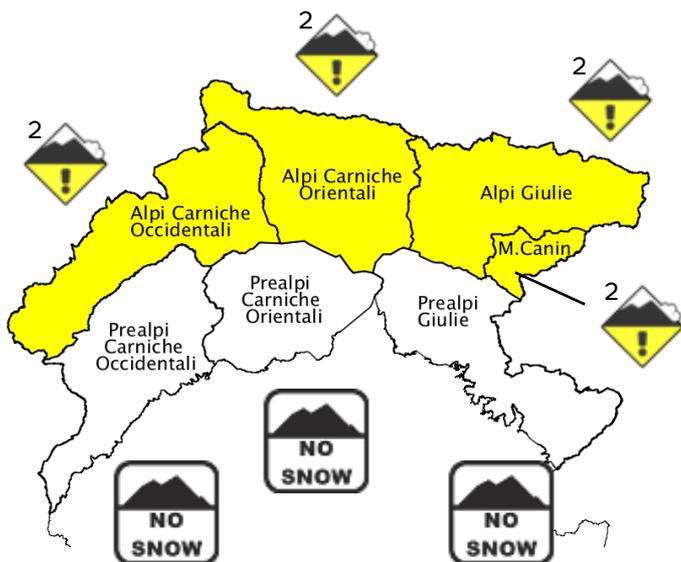

Thermal Zero: 2000 m
T.average 1000: 8 °C
T.average 2000: 0 °C

Weather by OSMER - ARPA FVG:
Variable sky.

Snow cover conditions and avalanche danger: Variable sky with zero-degree line at 2000 m. The clear sky will facilitate consolidation of the snowpack, especially in the morning and up to 2500 m. In the Alpine area above 2000 m, loose snow releases may be possible under walls and along the steepest couloirs due to the expected sunshine. Avalanches may still occur in areas where snow is not present and under release areas. Above 2000 m slab triggering may occur also with light overload, especially at the highest altitudes. Forecast danger level: 2 (moderate) on the Carniche and Giulie Alps. No avalanche danger on the Prealps.

Forecast for Monday 01 May 2017, reliability: 60%

New snowfalls Possible natural avalanches and triggering also with low overloading.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

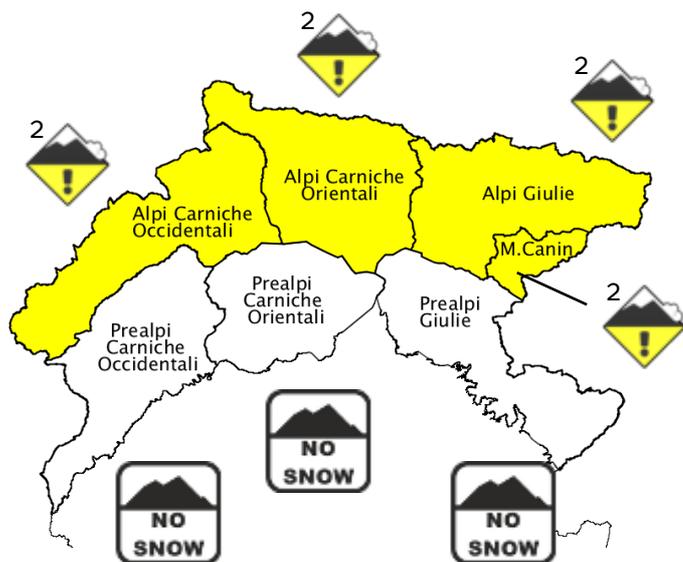

Thermal Zero: 1800 m
T.average 1000: 4 °C
T.average 2000: -1 °C

Weather by OSMER - ARPA FVG:
Partly cloudy in the morning. From afternoon-evening new rainfalls are expected, snowfalls above approx. 1400

Snow cover conditions and avalanche danger: Worsening weather conditions. Possible widespread snowfalls from the afternoon-evening: 10 cm above 1500 m. The new snowfalls will not change avalanche danger. In the Alpine area, above 2000 m and on all aspects, small releases and avalanches may still be possible, especially from the afternoon. Above 2000 m in the Alpine area, triggering may occur locally also with light overload, especially at the highest altitudes. On the Prealps the low amount of new snow will not change avalanche danger, which will remain very low. Forecast danger level: 2 (moderate) on the Carniche and Giulie Alps. No avalanche danger on the Prealps.

Forecast for Tuesday 02 May 2017, reliability: 60%

New snowfalls Possible natural avalanches and triggering also with low overloading.

Weather by OSMER - ARPA FVG:

Residual snowfalls in the morning.
Improvements later on.

Snow cover conditions and avalanche danger: Residual snowfalls above 1400 m (5-10 cm above 1500 m) in the morning. In the Alpine area, above 2000 m and on all aspects, small releases and avalanches may still be possible, especially during the warmest hours. Above 2000 m in the Alpine area, triggering may occur locally also with light overload, especially at the highest altitudes. On the Prealps the low amount of new snow will not change avalanche danger, which will remain very low. Forecast danger level: 2 (moderate) on the Carniche and Giulie Alps. No avalanche danger on the Prealps.
