PIANCAVALLO	1280	0	0	-0,4	7,5
TARVISIO	800	0	0	4,4	17

Snow cover conditions and avalanche danger: The new snow fallen last week consolidated quickly, thanks to the alternation of positive daily temperatures and negative night temperatures. Last week medium to large avalanches were the only major weather events, this week triggering danger has significantly decreased. In the past few hours 20-25 cm of new snow above 1300 m on the Alps and 1500 on the Prealps on the whole mountain territory. Above 1800 superficial loose snow releases and small avalanches may be possible during the warmest hours along the usual routes and on all aspects. In major accumulation areas under the steepest ridges and passes, triggering can occur also with low overloading.. Current danger level: 2 (moderate) on the Alps, 1 (low) of the Prealps.

Forecast for Wednesday 03 May 2017, reliability: 80%

Small loose snow avalanches may be possible during the warmest hours.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

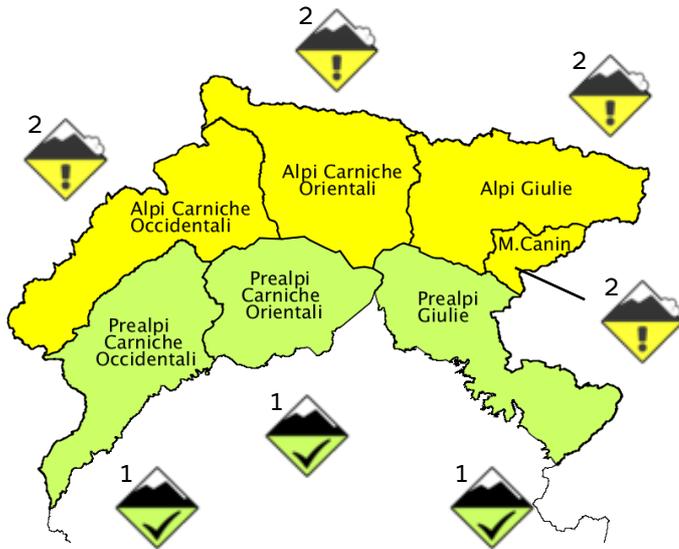

Thermal Zero: 2200 m
T.average 1000: 8 °C
T.average 2000: 1 °C

Weather by OSMER - ARPA FVG:
Variable, more cloudy on the Prealps. isolated showers may be possible in the afternoon.

Snow cover conditions and avalanche danger: Variable : clearer sky and clouds and local showers will alternate in the afternoon. Small loose snow releases will still be possible on all aspects, along usual routes and from the steeper slopes. Triggering on the Alps will be possible under the steepest ridges and passes at the highest altitudes, locally also with low overloading. Forecast danger level: 2 (moderate) on the Alps, 1 (low) of the Prealps.

Forecast for Thursday 04 May 2017, reliability: 80%

Small loose snow avalanches may be possible during the warmest hours.

T.average 2000: 0 °C

Weather by OSMER - ARPA FVG:
Cloudy with moderate precipitations.
Isolated storms with abundant
rainfalls. Snow above 1500 m.

Snow cover conditions and avalanche danger: Perturbations on Thursday and new precipitations on the whole territory, snow above 1500-1600 m, variable amounts (10-25 cm). Avalanche danger will remain moderate on the Alps; low on the Prealps due to absence of snow. During the day small avalanches of loose snow and releases will be possible along usual routes on all aspects. Triggering on the Alps will be possible under the steepest ridges and passes above 2000 m also with low overloading. Forecast danger level: 2 (moderate) on the Alps, 1 (low) of the Prealps.

Forecast for Friday 05 May 2017, reliability: 80%

Small loose snow avalanches may be possible during the warmest hours.

Thermal Zero: 2400 m
T.average 1000: 9 °C
T.average 2000: 2 °C

Weather by OSMER - ARPA FVG:
Variable during the day. Widespread
rainfalls and showers from midday will
be likely.

Snow cover conditions and avalanche danger: Spring-like weather also on Friday: variable and possible scattered showers, snow only above approx. 2000 m. The snowpack will be generally stable, except for the little amount of superficial new snow formed in the past days, which may lead to small superficial avalanches above 1800-2000 m, along usual routes during the warmest hours. Forecast danger level: 2 (moderate) on the Alps, 1 (low) of the Prealps.
