Thermal Zero: 2200 m  
T.average 1000: 2 °C  
T.average 2000: 1 °C

**Weather by OSMER - ARPA FVG:**

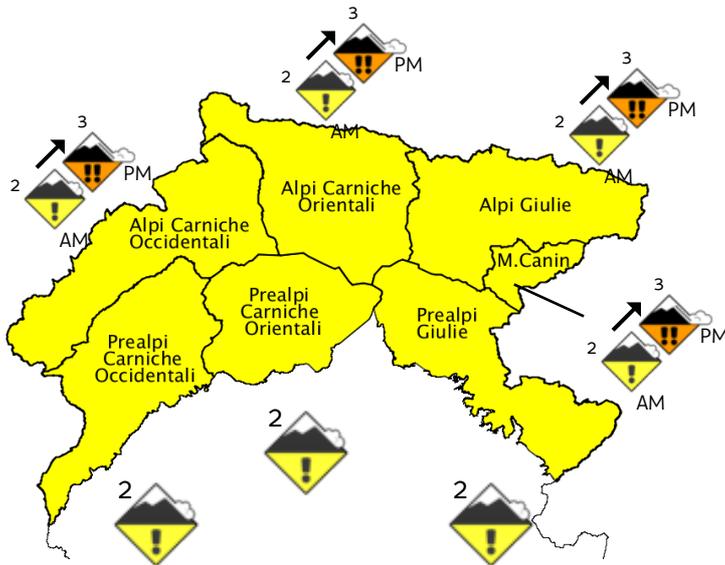

In the morning, the sky will be clear. It will be partly cloudy during the rest of the day due to low clouds.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI -	1750	40	0	-3	0
VARMOST M.TE SIMONE	1870	58	0	-3	4
SELLA NEVEA - LIVINAL	1837	91	0	-4	0
PIANCAVALLO	1280	4	0	-1	7
TARVISIO	800	12	0	-6	4

**Snow cover conditions and avalanche danger:** Possible triggering of little and medium-sized avalanches with a generally high overload, except for very steep slopes and during the warmer hours, when the local low overload is not excluded. The dangerous sites are located in the areas with deposits from wind and are usually clearly recognizable in all expositions above 1800-1900 m. Possible little natural avalanches on very steep slopes exposed to the sun during the warmer hours. Forecast danger level: 2 (moderate) tending to 3 (considerable) during the warmer hours. Possible little triggered avalanches on the Prealps with a generally high overload; the low overload is not excluded locally and during the warmer hours. The dangerous sites are limited to the highest altitudes and the wind accumulations are little. Possible releases from steeper walls and slopes during the warmer hours. Forecast danger level: 2 (moderate).

Forecast for Thursday 16 November 2017, reliability: 70%

**Possible both natural and triggered local avalanches and during the warmer hours with low overload.**

T.average 1000: 4 °C  
T.average 2000: 0 °C

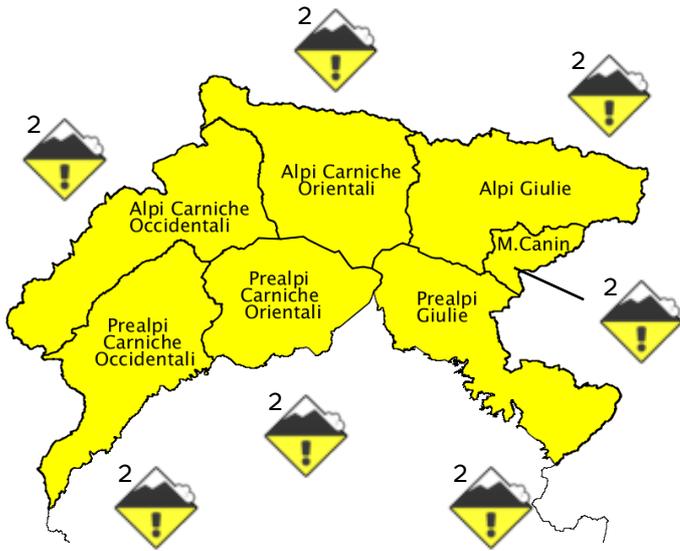

**Weather by OSMER - ARPA FVG:**

Variable, better weather in the morning. Probable more cloudiness on the Giulie Alps.

**Snow cover conditions and avalanche danger:** Possible triggering of little and medium-sized avalanches with a generally high overload, except for very steep slopes and during the warmer hours, when the local low overload is not excluded. The dangerous sites are located in the areas with deposits from wind and are usually clearly recognizable in all expositions above 1800-1900 m. Possible little natural avalanches on very steep slopes exposed to the sun during the warmer hours. Forecast danger level: 2 (moderate) tending to 3 (considerable) during the warmer hours. Possible little triggered avalanches on the Prealps with a generally high overload; the low overload is not excluded locally and during the warmer hours. The dangerous sites are limited to the highest altitudes and the wind accumulations are little. Possible releases from steeper walls and slopes during the warmer hours. Forecast danger level: 2 (moderate).

Forecast for Friday 17 November 2017, reliability: 70%

Possible little local triggered avalanches even with low overload.

Thermal Zero: 1800 m  
T.average 1000: 4 °C  
T.average 2000: -1 °C

**Weather by OSMER - ARPA FVG:**  
Variable cloudiness, possible clouds  
on the Giulie.

**Snow cover conditions and avalanche danger:** The temperatures will decrease. Possible release on the Alps due to little and medium-sized avalanches with high overload, on very steep slopes the low overload is not excluded. The dangerous sites are located in the areas with deposits from wind in all expositions above 1800-1900 m. Forecast danger level: 2 (moderate). Possible little triggered avalanches on the Prealps with a generally high overload. The dangerous sites are limited to the highest altitudes and the wind accumulations are little. Forecast danger level: 2 (moderate).

Forecast for Saturday 18 November 2017, reliability: 60%

Possible little local triggered avalanches even with low overload.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Thermal Zero: 1500 m  
T.average 1000: 2 °C  
T.average 2000: -3 °C

**Weather by OSMER - ARPA FVG:**  
Cloudy in the morning, not to exclude  
some precipitations in the east side.  
Variable during the day.

**Snow cover conditions and avalanche danger:** There will be another decrease of the temperatures. Possible release on the Alps due to little and medium-sized avalanches with high overload, on very steep slopes the low overload is not excluded. The dangerous sites are located in the areas with deposits from wind in all expositions above 1800-1900 m. Forecast danger level: 2 (moderate). Possible little triggered avalanches on the Prealps with a generally high overload. The dangerous sites are limited to the highest altitudes and the wind accumulations are little. Forecast danger level: 2 (moderate).
