

Situation of 04 December 2017 edition of the hours 14-next update 07-12-2017 hours 14, forecaster: GA

reliability: 70%

**Triggered release danger in the accumulation zones at altitude.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

15 km/h

Thermal Zero: 1500 m  
T.average 1000: -2 °C  
T.average 2000: -6 °C

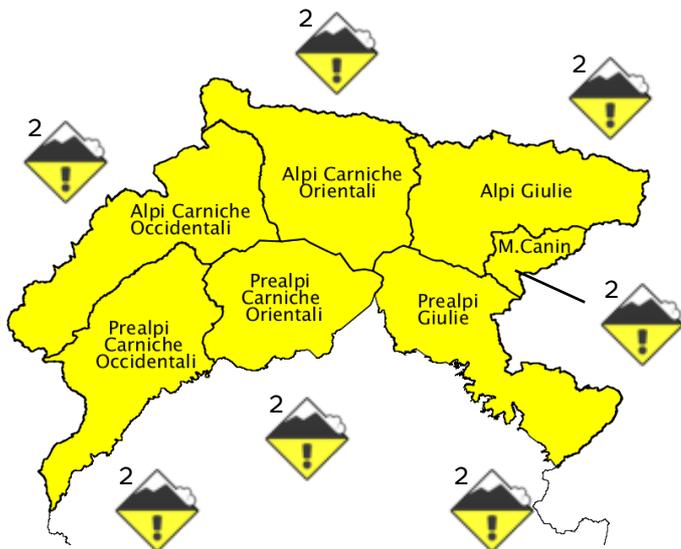

**Weather by OSMER - ARPA FVG:**  
Partly cloudy to variable.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	50	0	-9	-1
VARMOST M.TE SIMONE	1870	54	0	-9,4	-2,1
SELLA NEVEA - LIVINAL LUNC	1837	109	0	-8,2	-4,5
PIANCAVALLO	1280	19	0	-8,4	0,4
TARVISIO	800	18	0	-12	-1

**Snow cover conditions and avalanche danger:** Forecast danger level 2 (moderate) across the whole mountainous area. Wind drift accumulations on all aspects on the Alps above 1800-2000 m. In these areas, especially below ridges and forks and along the couloirs, there is the possibility to trigger the release of small-sized avalanches, due to a generally high overload. Some releases may occur locally and may be caused by a single skier or hiker, especially on steep slopes and to the North. Possible isolated releases on steeper slopes during the warmer hours. The wind drift accumulations located on the Prealps are smaller and less widespread. The snow burial danger is low, the dragging danger is relevant on steep slopes at altitude. In the last few days, the wind has strongly reshaped the snow cover. Temperatures are constantly below zero. We still have little information about the snow cover condition.

Forecast for Tuesday 05 December 2017, reliability: 70%

**Possible both spontaneous and triggered small-sized avalanches.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

N 50 km/h

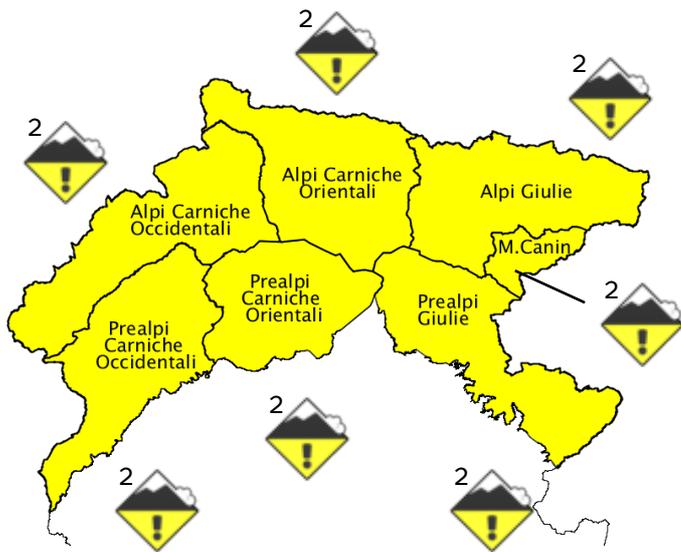

Thermal Zero: 1800 m  
T.average 1000: 1 °C  
T.average 2000: -4 °C

**Weather by OSMER - ARPA FVG:**  
Mostly clear sky and temporary variable on ridges in border with Austria. Cold in the morning.

**Snow cover conditions and avalanche danger:** Moderate (2) avalanche danger across the whole mountainous area. Good weather, still strong North-Western winds at altitude and temperature increase during the day. The greatest danger is the possible triggered small-sized releases in the wind drift accumulation zones, on all aspects above 1800-2000 m, with a generally high overload. Some releases may occur locally and may be caused by a single skier or hiker, especially on steep slopes and to the North. The wind drift accumulations located on the Prealps are smaller and less widespread. The snow burial danger is low, the dragging danger is relevant on steep slopes at altitude.

Forecast for Wednesday 06 December 2017, reliability: 70%

Possible both spontaneous and triggered small-sized avalanches.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

N 20 km/h  
T max T min  
Thermal Zero: 2600 m  
T.average 1000: 3 °C  
T.average 2000: 3 °C

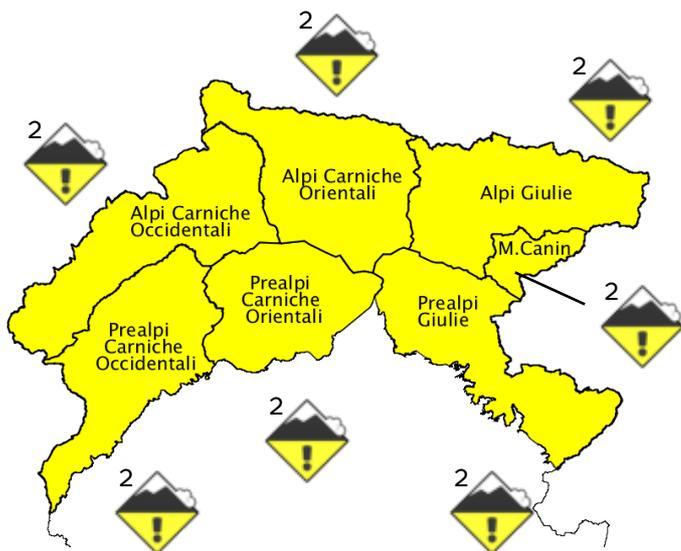

Weather by OSMER - ARPA FVG:

Mostly clear sky, frosts and hoarfrost in the morning. Thermal reversal in valleys.

**Snow cover conditions and avalanche danger:** Sunny and perceptible temperature increase during the day. Moderate (2) avalanche danger across the whole territory. In the wind draft accumulation zones above 1800 m and on all aspects, the release of small-sized slabs may still occur in the morning, with a generally high overload. In the warmer hours, it may occur locally, even with low overload on steeper slopes. During the warmer hours possible spontaneous small-sized releases on sunny slopes, even in the cross-country on green slopes, especially in crevice areas caused by slip.

Forecast for Thursday 07 December 2017, reliability: 70%

Possible both spontaneous and triggered small-sized avalanches.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

SW 20 km/h  
T max T min  
Thermal Zero: 2000 m  
T.average 1000: 0 °C  
T.average 2000: 0 °C

Weather by OSMER - ARPA FVG:

Increasing cloudiness and thermal reversal in valleys. In the evening precipitations to the East.

**Snow cover conditions and avalanche danger:** Increasing cloudiness. Moderate (2) avalanche danger across the whole territory. In the wind draft accumulation zones above 1800 m and on all aspects, the release of small-sized slabs may still occur in the morning, with a generally high overload. In the warmer hours, it may occur locally, even with low overload on steeper slopes. During the warmer hours possible spontaneous small-sized releases on sunny slopes, even in the cross-country on green slopes, especially in crevices areas caused by slip.
