

Situation of 07 December 2017 edition of the hours 14-next update 11-12-2017 hours 14, forecaster: LL

reliability: 70%

Possible both spontaneous and triggered small-sized avalanches.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1800 m
T.average 1000: 1 °C
T.average 2000: -1 °C

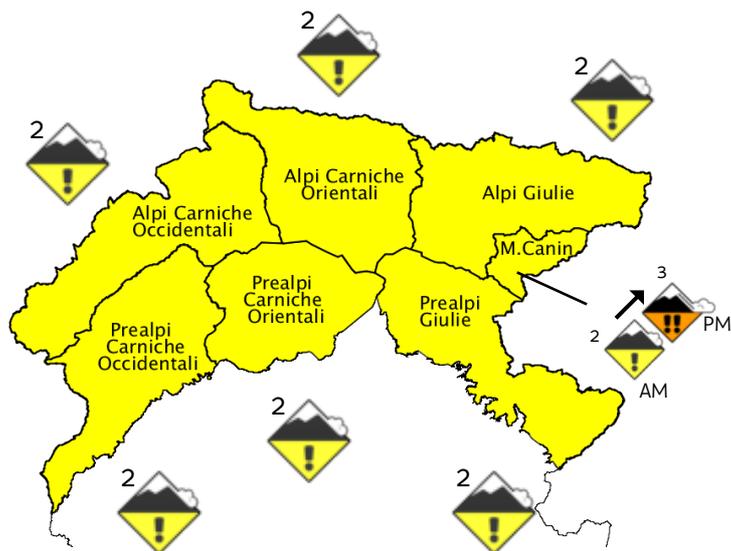

Weather by OSMER - ARPA FVG:
Variable. Increasing cloudiness during the day, overcast in the evening.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	45	0	-2,1	6,5
VARMOST M.TE SIMONE	1870	50	0	0,7	7,7
SELLA NEVEA - LIVINAL LUNC	1837	105	0	1,5	4,3
PIANCAVALLO	1280	17	0	-4	7,3
TARVISIO	800	15	0	-5	4,8

Snow cover conditions and avalanche danger: Increasing cloudiness during the day. Moderate (2) avalanche danger across the whole territory. In the wind draft accumulation zones above 1800 m and on all aspects, the release of small-sized slabs may still occur in the morning; in the warmer hours, it may occur locally, even with low overload on steeper slopes. During the warmer hours possible spontaneous small-sized releases on steeper slopes, even in the cross-country on green slopes, especially in skid crevices. The wind draft accumulations located on the Prealps are smaller and less widespread. The burial danger is low, the dragging danger is relevant on steep slopes at altitude. The snow cover has been strongly reshaped by the wind. We still have little information about the snow cover condition.

Forecast for Friday 08 December 2017, reliability: 70%

Possible both spontaneous and triggered avalanches, even medium-sized on the Canin massif.

M. Canin

Thermal Zero: 1200 m
T.average 1000: 1 °C
T.average 2000: -4 °C

Weather by OSMER - ARPA FVG:
Overcast, slight and scattered snowfall to the West, more abundant and constant to the East from the afternoon.

Snow cover conditions and avalanche danger: Overcast and slight snowfall in the morning, abundant snowfall (up to 40 cm) on the Canin mountain range and moderate snowfall (10 to 15 cm) across the rest of the territory. The new snow will lean on slight layers, especially to the North. There will be a strong wind too, forming new accumulations. Spontaneous small-sized avalanches may occur on steeper slopes. In the new accumulation zones, slab avalanches may locally occur, even with low overload. Possible medium-sized releases on the Canin massif. Forecast danger level: 2 (moderate) increasing to 3 (considerable) on the Canin, 2 (moderate) across the rest of the mountainous territory.

Forecast for Saturday 09 December 2017, reliability: 70%

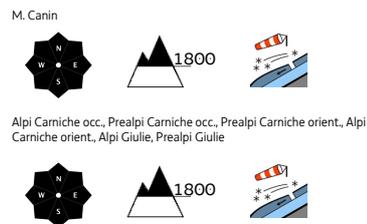

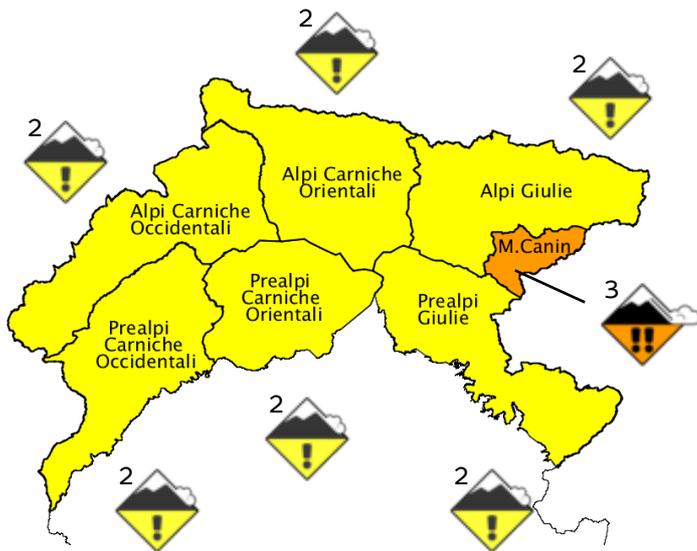

Possible both spontaneous and triggered avalanches, even medium-sized on the Canin massif.

Snow cover conditions and avalanche danger: Overcast and residual snowfalls (0 to 5 cm) in the morning, especially to the East; generally clear sky and cold in the afternoon. Still possible spontaneous small-sized avalanches on steeper slopes. In the new accumulation zones, slab avalanches may locally occur, even with low overload. Possible medium-sized releases on the Canin massif. Forecast danger level: 3 (considerable) on the Canin massif, 2 (moderate) across the rest of the mountainous territory.

Forecast for Sunday 10 December 2017, reliability: 60%

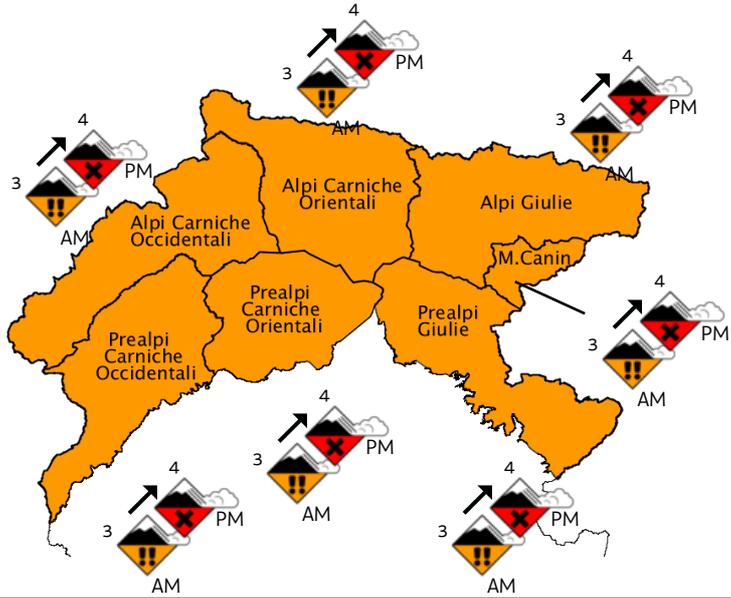

Possible both spontaneous and triggered avalanches, even medium-sized on the Canin massif.

Snow cover conditions and avalanche danger: Partly cloudy in the morning, increasing cloudiness from the afternoon and possible slight snowfalls (5 to 10 cm) down to the valley floor. Still possible spontaneous small-sized avalanches on steeper slopes. In the new accumulation zones, slab avalanches may locally occur, even with low overload. Possible medium-sized releases on the Canin massif. Forecast danger level: 3 (considerable) on the Canin massif, 2 (moderate) across the rest of the mountainous territory.

Forecast for Monday 11 December 2017, reliability: 60%

Heavy snow danger, possible large-sized avalanches.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2200 m
T.average 1000: 4 °C
T.average 2000: 1 °C

Weather by OSMER - ARPA FVG:
Uncertain evolution. Overcast and abundant snowfalls until the plain in the morning, in ascent later.

Snow cover conditions and avalanche danger: Overcast and abundant snowfall above 1800-1900 m, abundant new snow quantity on the Alps and considerable new snow quantity on the Prealps. If the forecast is confirmed, there will be a widespread danger above 1800 m and on all aspects and spontaneous large-sized avalanches may occur, whereas the triggered release may occur even with low overload. Forecast danger level: 3 (considerable) increasing to 4 (high) related to the snowfall quantity, during the day and across the whole territory.
