

Situation of 11 December 2017 edition of the hours 14-next update 13-12-2017 hours 14, forecaster: LL

reliability: 70%

**Increasing danger on the Alps due to new heavy snowfall, possible large-sized avalanches.**

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 2300 m  
T.average 1000: 5 °C  
T.average 2000: 1 °C

**Weather by OSMER - ARPA FVG:**

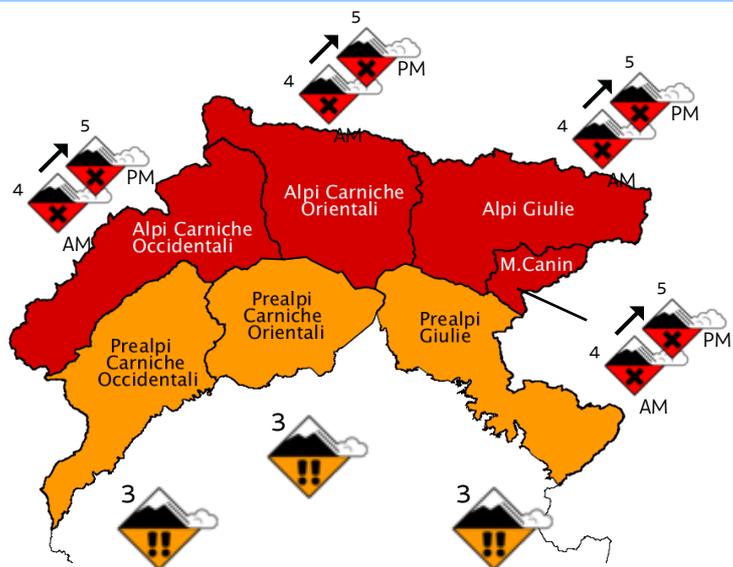

Intense to very intense precipitations.  
Increasing snow level, above 1500 and 2000 m. Strong South-Western winds.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	20	15	-5	3
VARMOST M.TE SIMONE	1870	80	20	-10	0
SELLA NEVEA - LIVINAL LUNC	1837	160	60	-10	0
PIANCAVALLO	1280	15	10	-10	2
TARVISIO	800	70	20	-10	0

**Snow cover conditions and avalanche danger:** Between Monday and Tuesday, expected intense snowfall on the Alps (more than 100 cm above 1900-2000 m to the East and above 1700 m to the West). Expected rainfall on the Prealps, up to the highest altitudes. The strong winds will form consistent accumulations, especially to the northern aspects. From Monday evening, widespread danger and possible spontaneous avalanches, even large-sized ones, and possible release with low overload. From the evening the avalanche activity could affect the communication paths above 1000 m, possible avalanche danger on settlements above 1200-1300 m. Forecast danger level: 3 (considerable) increasing to 4 (high) in the evening on the Alps, 2 (moderate) on the Prealps.

Forecast for Tuesday 12 December 2017, reliability: 60%

**High spontaneous avalanche danger, even large-sized ones, on the Alps.**

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 1800 m  
T.average 1000: 5 °C  
T.average 2000: -2 °C

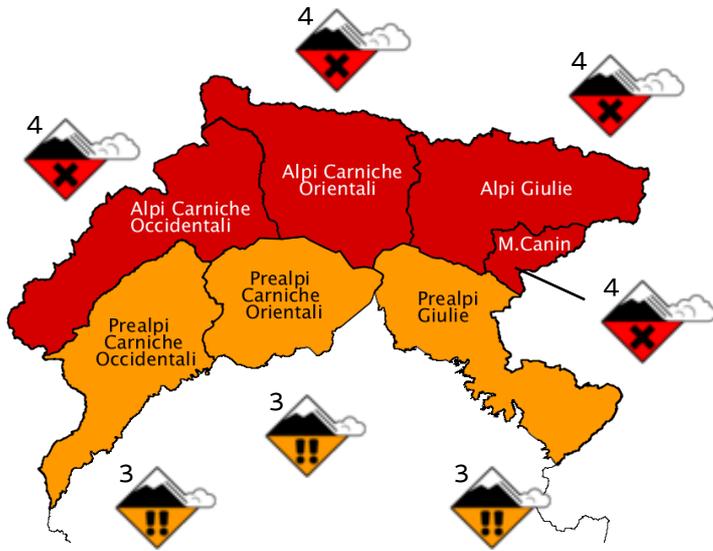

**Weather by OSMER - ARPA FVG:**

Intense to very intense precipitations. Snow level between 1500 and 1800 m. Improvements in the late afternoon.

**Snow cover conditions and avalanche danger:** Intense snowfall in the morning; less intense snowfall but at lower altitudes in the afternoon. Danger level on the Alps: 4 (high) possibly increasing to 5 (very high) concerning the snow level and the snow quantity. On all aspects, and especially on northern aspects, possible multiple spontaneous medium and large-sized avalanches. The avalanche activity could affect the communication paths at 1000 m and the settlements above 1200-1300 m. Possible triggered slab release even with low overload. Increasing danger on the Prealps, due to snowfall at lower altitude: above 1700-1800 m and especially to the North, possible triggered releases, generally of small size even with low overload. Possible spontaneous small-sized avalanches on steeper slopes. Forecast danger level: 3 (considerable) on the Prealps.

Forecast for Wednesday 13 December 2017, reliability: 60%

High spontaneous avalanche danger, even large-sized ones, on the Alps.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 1100 m  
T.average 1000: 0 °C  
T.average 2000: -6 °C

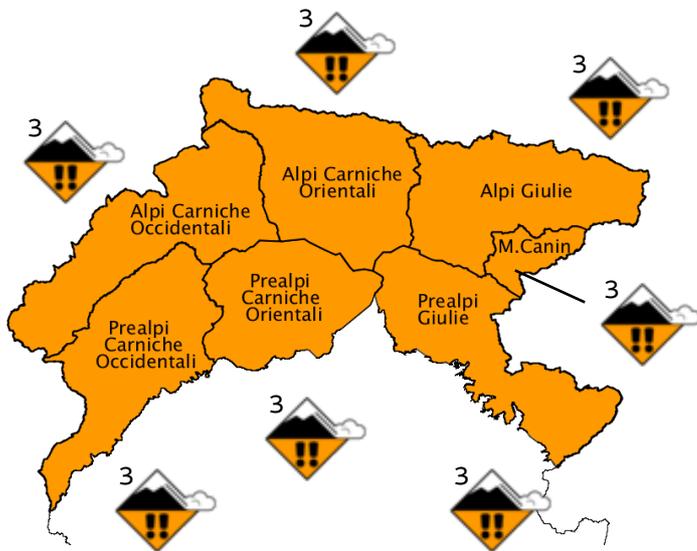

Weather by OSMER - ARPA FVG:

Variable, scattered moderate precipitations;  
snow level: 700 m.

**Snow cover conditions and avalanche danger:** Cloudy in the morning, residual snowfall especially to the East. Clear sky in the afternoon. Strong temperature decrease. Danger level on the Alps: 4 (high). Still possible spread spontaneous medium-sized avalanches and even some large-sized avalanches above the tree line. A triggered release may occur in the wind drift accumulation zones, even with low overload. The spontaneous avalanche activity is less widespread and less considerable on the Prealps. The triggered slab small-sized release may occur with low overload, especially above 1700 m on the northern aspects. Forecast danger level: 3 (considerable) on the Prealps.

Forecast for Thursday 14 December 2017, reliability: 60%

Possible both spontaneous and triggered avalanches, even with low overload.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1100 m  
T.average 1000: 0 °C  
T.average 2000: -6 °C

Weather by OSMER - ARPA FVG:

Cloudy to overcast and slight snowfall above  
600 m.

**Snow cover conditions and avalanche danger:** Worsening from the morning, cloudy and possible slight snowfall above 800 m. On the Alps above the tree line, still possible spontaneous medium-sized avalanches on the steeper slopes not released yet. A triggered slab release may occur in the wind drift accumulation zones, especially on northern aspects, even with low overload. The spontaneous avalanche activity is less widespread and less considerable on the Prealps. The triggered slab small-sized release may occur with low overload, especially above 1700 m on the northern aspects. Forecast danger level: 3 (considerable) across the whole territory.
