

Situation of 02 January 2018 edition of the hours 14-next update 05-01-2018 hours 14, forecaster: DM

reliability: 80%

**Possible spontaneous or artificially caused avalanches even with slight overload**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1400 m  
T.average 1000: 2 °C  
T.average 2000: -5 °C

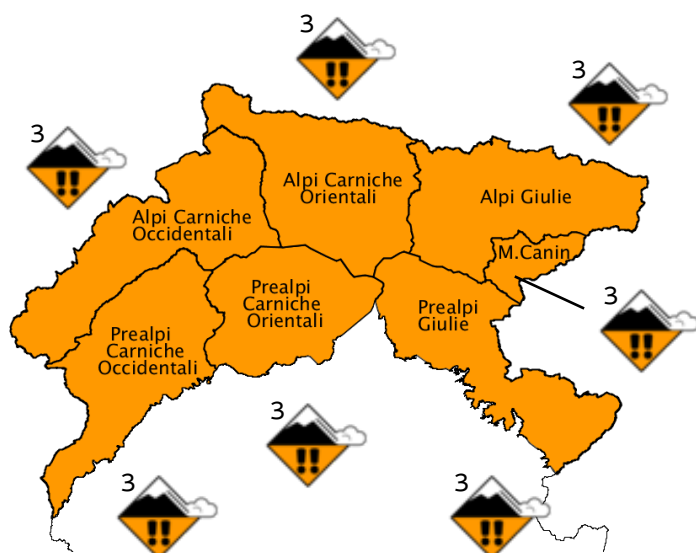

**Weather by OSMER - ARPA FVG:**  
Slightly cloudy, better weather during the day

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	127	20	-5,1	-0,8
VARMOST M.TE SIMONE	1870	132	20	-4	-1
SELLA NEVEA - LIVINAL LUNC	1837	255	30	-4,1	0,6
PIANCAVALLO	1280	50	15	-2,2	-1,8
TARVISIO	800	26	10	-1	2,2

**Snow cover conditions and avalanche danger:** The snow has fallen widely in the whole region on the new year's day, with 10-20 cm above 1200 m and 25-30 cm in the surroundings of Tarvisio and Canin. The new snow laid itself on a surface made solid and stable by the recent avalanches. The stability of the surface was made possible by the recent changes in temperatures from above to under the zero in the high altitudes. The wind have formed new small snow accumulations in every direction. Above the tree line in the couloirs and under the ridges and saddles the induced detachment of small scale avalanches is possible even with a small overload or will be made possible by the passage of even a single skier. The chance that some detachment will set off in the steep cliffs is limited to some little scale avalanches. Risk level 3 (Sharp)

Forecast for Wednesday 03 January 2018, reliability: 80%

**Possible spontaneous or artificially caused avalanches even with slight overload**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

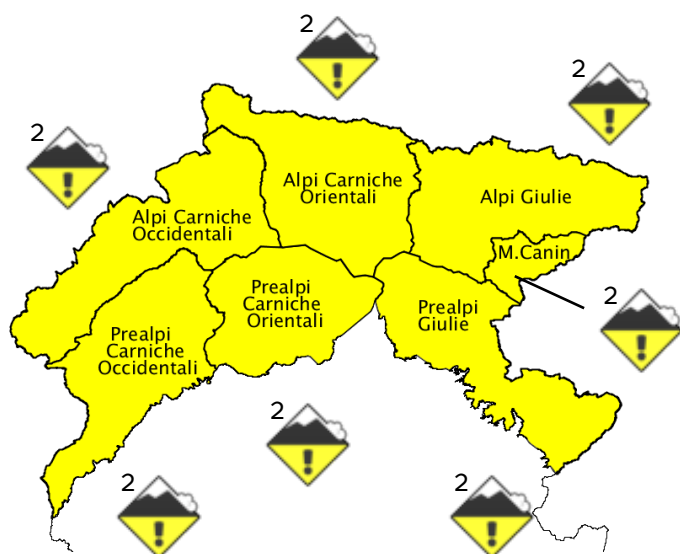

Thermal Zero: 1400 m  
T.average 1000: 0 °C  
T.average 2000: 3 °C

**Weather by OSMER - ARPA FVG:**  
Unstable weather with some clouds. Small snow storms above 500m. In the height strong winds.

**Snow cover conditions and avalanche danger:** In the morning the weather will be unstable or clouded, in the afternoon small snow storms (1-5cm) above 500-600 m will not change the stability of the snowpack. The wind will get on moving the snow in the northerner areas. Above the tree line in the couloirs and under the ridges and saddles the induced detachment of small scale avalanches is possible even with a small overload or will be made possible by the passage of even a single skier. The chance that some detachment will set off in the steep cliffs is limited to some little scale avalanches. Danger level 3 (Sharp)

Forecast for Thursday 04 January 2018, reliability: 70%

Possible locally artificially caused avalanches even with slight overload

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

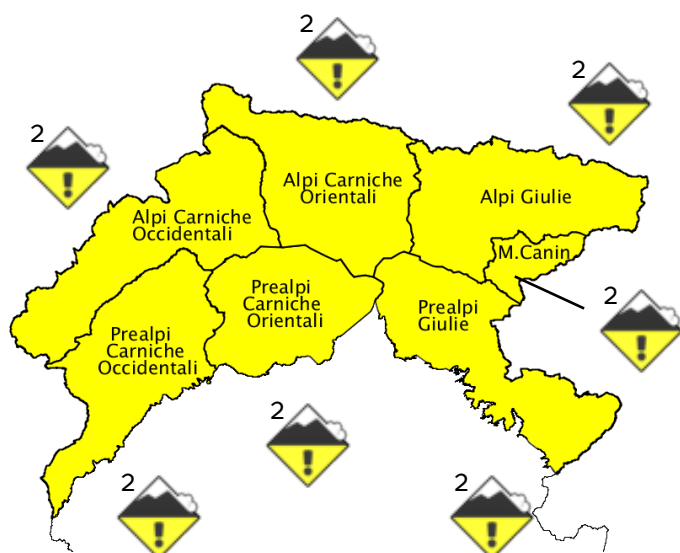

Thermal Zero: 1800 m  
T.average 1000: 0 °C  
T.average 2000: -1 °C

**Weather by OSMER - ARPA FVG:**  
Unpredictable clouds with possible small snowfalls in the Alps. Higher temperatures during the day.

**Snow cover conditions and avalanche danger:** The sky will be cloudy and unstable with small chance of little snow falls in the afternoon or evening (1-5cm). The amount of snow will not change the level of risk, the snowpack is solid almost everywhere. The most dangerous areas are above the tree line in the couloirs and under the ridges and saddles the induced detachment of small scale avalanches is possible even with a small overload or will be made possible by the passage of even a single skier. The chance that some detachment will set off in the steep cliffs is limited to some little scale avalanches. Before setting off for an excursion be sure to make a deep evaluation of the snowpack conditions. Risk level 2 (Moderate)

Forecast for Friday 05 January 2018, reliability: 60%

Possible locally artificially caused avalanches even with slight overload

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2500 m  
T.average 1000: 3 °C  
T.average 2000: 1 °C

**Weather by OSMER - ARPA FVG:**  
Unstable weather with possible clouds. Small snow falls towards the East.

**Snow cover conditions and avalanche danger:** The sky will be cloudy or at least unstable, the temperature will start to climb already during the night. Above the tree line in the couloirs and under the ridges and saddles the induced detachment of small scale avalanches is possible even with a small overload or will be made possible by the passage of even a single skier. The chance that some detachment will set off in the steep cliffs is limited to some little scale avalanches. Before setting off for an excursion be sure to make a deep evaluation of the snowpack conditions. Risk level 2 (Moderate)
