Snow cover conditions and avalanche danger: Slight snowfall (5 to 10 cm of new snow) occurred in our mountains, but it did not affect the snow cover stability. The most danger is especially represented by the wind drift accumulations not yet released above 1500 m, even in the wood clearings, especially to the northern aspects. Possible triggered release of slab avalanches in these areas, even by a single skier/hiker. Possible releases on sides, which could cause some spontaneous both slab and low-cohesive releases on the underlying very steep slopes not yet released. Forecast danger level: 3 (considerable) across the whole territory.

Forecast for Thursday 08 February 2018, reliability: 70%

Triggered avalanche danger with low overload and residual spontaneous avalanches.

T.average 2000: -7 °C

Weather by OSMER - ARPA FVG:
Mostly cloudy, local sprinkling of snow.

Snow cover conditions and avalanche danger: Cloudy to overcast, possible slight sprinkling of snow, which will not affect the danger level. The most danger is especially represented by the wind drift accumulations not yet released above 1500 m, even in the wood clearings, especially to the northern aspects. Possible triggered release of slab avalanches in these areas, even by a single skier/hiker. Still possible releases and small-sized low-cohesive avalanches on very steep slopes not yet released. Forecast danger level: 3 (considerable) across the whole territory.

Forecast for Saturday 10 February 2018, reliability: 70%

Still possible triggered avalanches with low overload.
