

Situation of 12 February 2018 edition of the hours 14-next update 14-02-2018 hours 14, forecaster: LL

reliability: 70%

Triggered avalanche danger even with low overload and local small-sized avalanches.

Alpi Giulie

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., M. Canin, Prealpi Giulie

NE 40 km/h

T max T min

Thermal Zero: 800 m

T.average 1000: -2 °C

T.average 2000: -8 °C

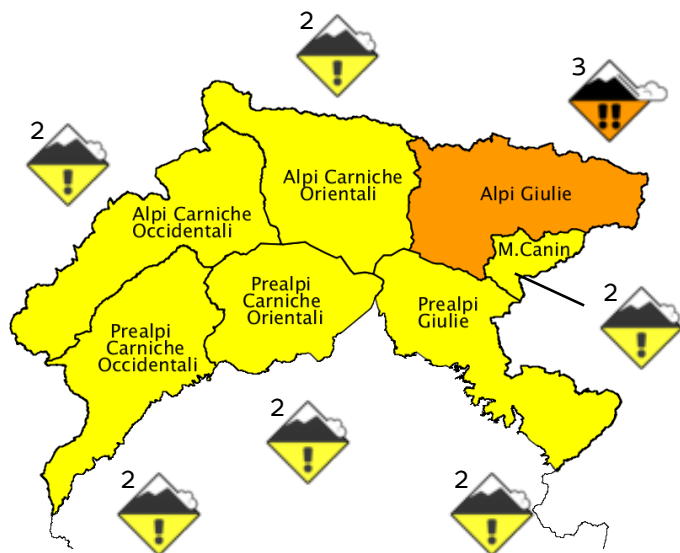

Weather by OSMER - ARPA FVG:
Overcast and slight snowfall, especially to the East.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	108	9	-7,5	1
VARMOST M.TE SIMONE	1870	146	13	-7,5	0
SELLA NEVEA - LIVINAL LUNC	1837	314	17	-9	-2
PIANCAVALLO	1280	56	8	-6	-1
TARVISIO	800	43	15	-5	1

Snow cover conditions and avalanche danger: 10-15 cm of new snow fell, 20-30 cm fell in the surroundings of Tarvisio. The new snow formed new small-sized precarious wind accumulations. The old snow cover is solidifying. Considerable danger level (3) on the Giulie Alps. Possible releases triggered by a single skier/hiker above 1700 m, on all aspects and especially below ridges and forks along the steepest slopes. Moderate danger level (2) across the rest of the mountain territory, related to the old deposits, which could cause some releases to the northern aspects, triggered by a generally high overload. Not to be excluded the local release on very steep slopes and at the highest altitudes, even with low overload. Not to be excluded local releases and small-sized avalanches across the whole territory.

Forecast for Tuesday 13 February 2018, reliability: 80%

Triggered avalanche danger even with low overload.

Alpi Giulie

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., M. Canin, Prealpi Giulie

Thermal Zero: 600 m

T.average 1000: -4 °C

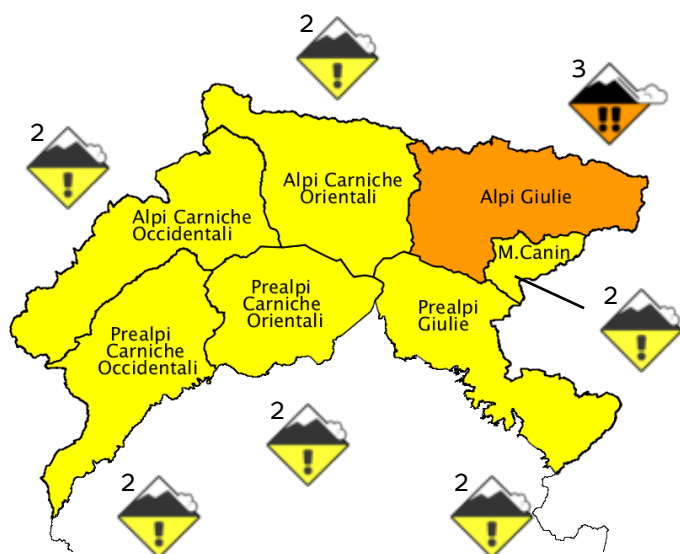

T.average 2000: -10 °C

Weather by OSMER - ARPA FVG:
Cloudy to overcast, residual sleet on the Giulie. Clear up later.

Snow cover conditions and avalanche danger: Overcast and residual sleet. Considerable danger level (3) on the Giulie Alps. Possible releases triggered by a single skier/hiker above 1700 m, on all aspects and especially below ridges and forks along the steepest slopes. Moderate danger level (2) across the rest of the mountain territory, related to the old deposits, which could cause some releases to the northern aspects triggered by a generally high overload. Not to be excluded the local release on very steep slopes and at the highest altitudes, even with low overload.

Forecast for Wednesday 14 February 2018, reliability: 80%

Triggered avalanche danger even with low overload.

Alpi Giulie

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., M. Canin, Prealpi Giulie

Thermal Zero: 600 m
T.average 1000: -4 °C
T.average 2000: -11 °C

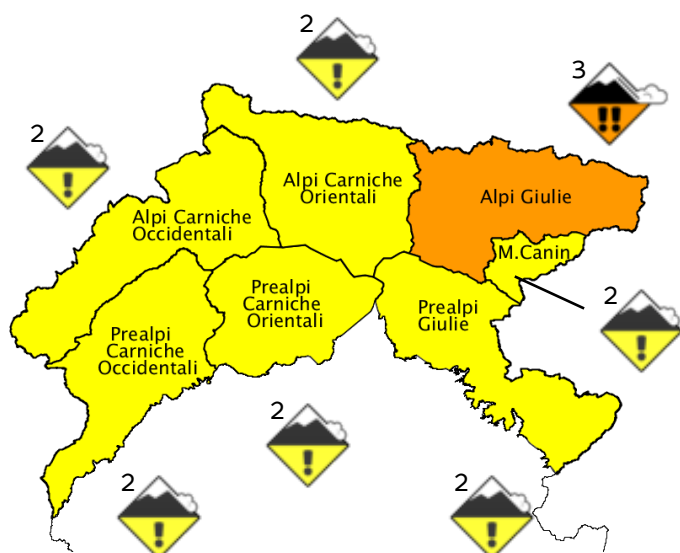

Weather by OSMER - ARPA FVG:

Clear sky, minimum temperatures around -10 °C in some valley floors.

Snow cover conditions and avalanche danger: Clear sky and low temperatures. Considerable danger level (3) on the Giulie Alps. Possible releases triggered by a single skier/hiker above 1700 m, on all aspects and especially below ridges and forks along the steepest slopes. Moderate danger level (2) across the rest of the mountain territory, related to the old deposits, which could cause some releases to the northern aspects triggered by a generally high overload. Not to be excluded the local release on very steep slopes and at the highest altitudes, even with low overload.

Forecast for Thursday 15 February 2018, reliability: 80%

Triggered avalanche danger even with low overload.

Alpi Giulie

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., M. Canin, Prealpi Giulie

Thermal Zero: 1200 m
T.average 1000: -3 °C
T.average 2000: -4 °C

Weather by OSMER - ARPA FVG:

Still good weather, very cold on the mountains during the night.

Snow cover conditions and avalanche danger: Clear sky, partly cloudy in the afternoon. Considerable danger level (3) on the Giulie Alps. Possible releases triggered by a single skier/hiker above 1700 m, on all aspects and especially below ridges and forks along the steepest slopes. Moderate danger level (2) across the rest of the mountain territory, related to the old deposits, which could cause some releases to the northern aspects triggered by a generally high overload. Not to be excluded the local release on very steep slopes and at the highest altitudes, even with low overload.
