

Situation of 26 March 2018 edition of the hours 14-next update 28-03-2018 hours 14, forecaster: DM

reliability: 80%

Triggered avalanche danger only above 2000 m and spontaneous small-sized avalanches to the S.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 1500 m
T.average 1000: 3 °C
T.average 2000: -3 °C

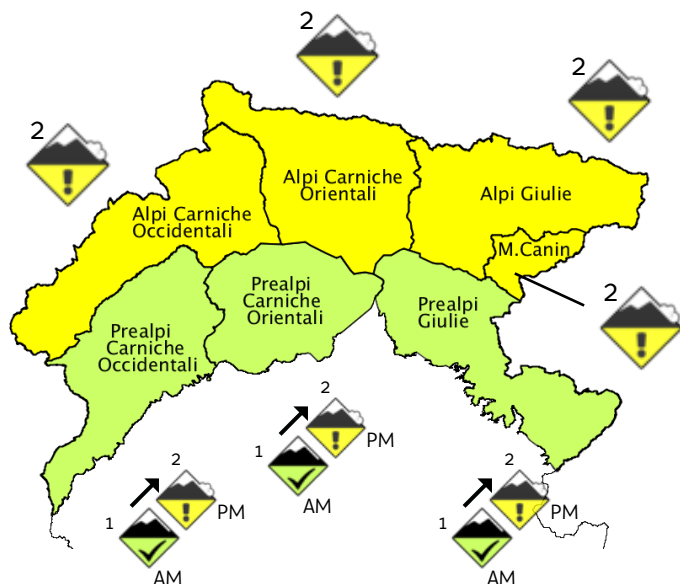

Weather by OSMER - ARPA FVG:
Clear sky or partly cloudy.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	140	0	-7	6
VARMOST M.TE SIMONE	1870	130	0	-7	2
SELLA NEVEA - LIVINAL LUNC	1837	332	0	-5	4
PIANCAVALLO	1280	68	0	-5	3,4
TARVISIO	800	0	0	-4	9

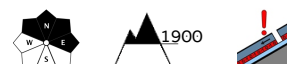

Snow cover conditions and avalanche danger: Moderate (2) danger level on the Alpine belt, due to the alternation within positive temperatures during the day and negative temperatures during the night, which favour a moderate consolidation of the snow cover up to 1900-2000 m, at least. Above this altitude, especially on the Giulie Alps, still possible triggered slab avalanches of medium and small size on shady aspects, with a generally high overload, in the accumulation zones not yet consolidated. Possible some spontaneous avalanches to the S. More consolidation on the Prealps, where the danger level is low (1) in the morning, increasing to 2 (moderate) during the warmest hours, when spontaneous small and medium-sized avalanches may occur on steep slopes exposed to the sun. The triggered release may occur with a high overload just below ridges and along the steepest couloirs at the highest altitudes.

Forecast for Tuesday 27 March 2018, reliability: 80%

Triggered avalanche danger only above 2000 m and spontaneous small-sized avalanches to the S.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

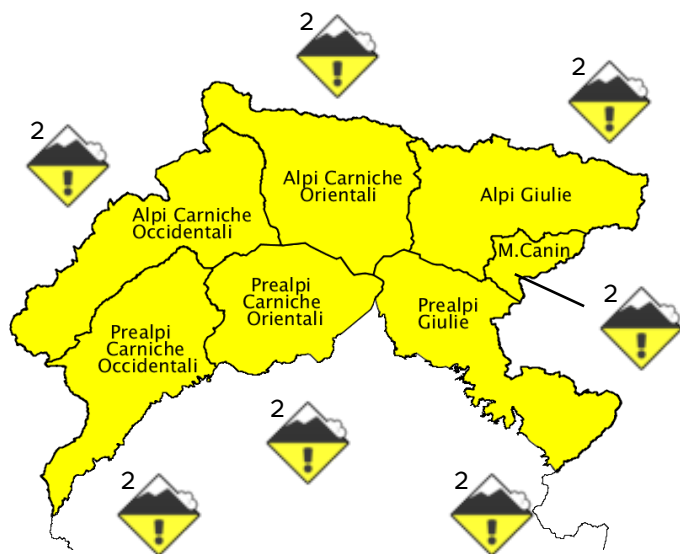

Thermal Zero: 1600 m
T.average 1000: 3 °C
T.average 2000: -3 °C

Weather by OSMER - ARPA FVG:
Variable in the morning, slight or moderate scattered precipitations in the late afternoon, snow above 1200 m.

Snow cover conditions and avalanche danger: Worsening on Tuesday, expected slight precipitations, which will not affect the snow cover stability. Moderate avalanche danger (2) on the Alpine belt, above 2000 m, especially on the Giulie Alps and on shady aspects still possible triggered slab avalanches of medium and small size, with a generally high overload, in the accumulation zones not yet consolidated. Possible some spontaneous avalanches to the S. On the Prealps the danger level will be low (1) in the morning, increasing to 2 (moderate) during the warmest hours, when spontaneous small and medium-sized avalanches may occur on steep slopes exposed to the sun. The triggered release may occur with a high overload just below ridges and along the steepest couloirs at the highest altitudes.

Forecast for Wednesday 28 March 2018, reliability: 80%

Triggered avalanche danger only above 2000 m and spontaneous small-sized avalanches to the S.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1600 m
T.average 1000: 4 °C
T.average 2000: -3 °C

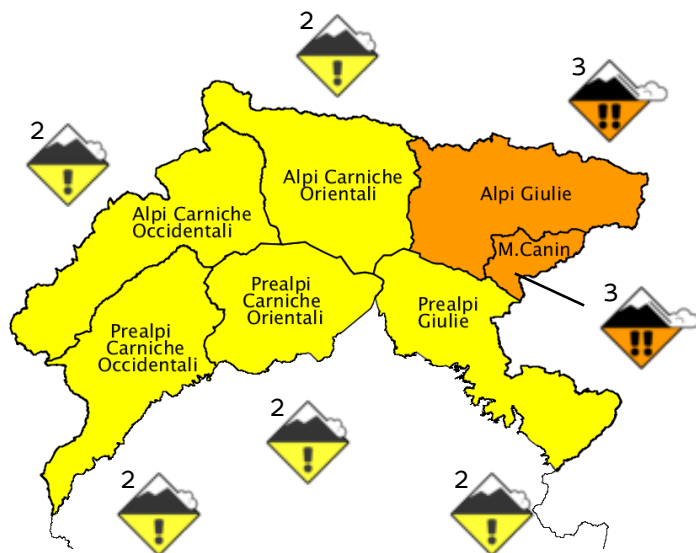

Weather by OSMER - ARPA FVG:

Variable cloudiness, scattered downpours in the evening. Possible snowfalls above about 1200-1400 m.

Snow cover conditions and avalanche danger: Worsening from the late afternoon on Wednesday. The avalanche danger will be moderate (2) across the whole territory. Above 1900 m, especially on the Giulie Alps and on northern aspects the release of slab small-sized avalanches may be triggered with a generally high overload, in the accumulation zones below steep ridges and forks. Possible spontaneous small-sized avalanches along the usual paths, on all aspects.

Forecast for Thursday 29 March 2018, reliability: 70%

Increasing danger due to new precipitations, snow only above 1800 m.

Alpi Giulie, M. Canin

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Prealpi Giulie

Thermal Zero: 1900 m
T.average 1000: 5 °C
T.average 2000: -1 °C

Weather by OSMER - ARPA FVG:

Widespread rainfalls on Thursday, especially in the afternoon, moderate to abundant. Snow above 1600 m.

Snow cover conditions and avalanche danger: Expected new snowfalls above 1800 m on Thursday: 20 cm on the Carnic Alps and Prealps, 40 cm on the Giulie Alps. Increasing avalanche danger (3) on the Giulie Alps, where above 1700-1800 m low-cohesive small-sized avalanches may occur along usual paths on all aspects. The triggered release may occur even with low overload, where there is new snow. Below this altitude there is the possibility of release, because the rain made the snow cover heavier. Moderate (2) danger across the rest of the territory above 1700-1800 m, due to possible spontaneous low-cohesive avalanches caused by the new snow or by the heavy snow.
