

Situation of 23 April 2018 edition of the hours 14-next update 24-04-2018 hours 14, forecaster: DM/MM

reliability: 80%

**Possible widespread releases during the warmest hours.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 3300 m  
T.average 1000: 12 °C  
T.average 2000: 9 °C

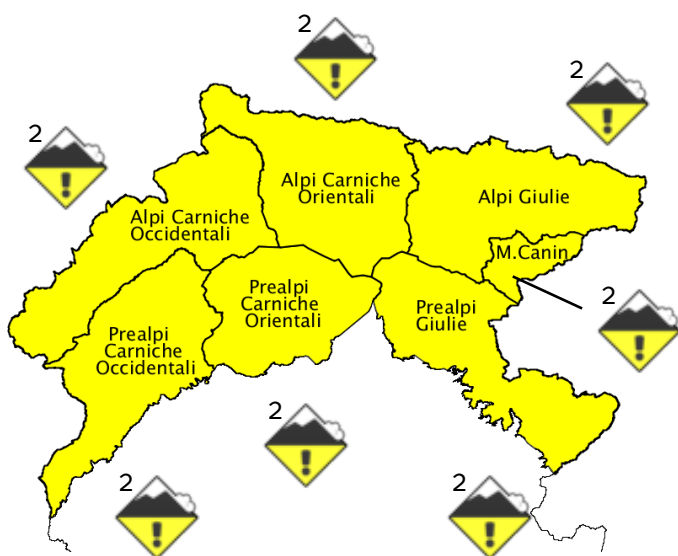

**Weather by OSMER - ARPA FVG:**  
Variable, possible local downpours in the afternoon.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	66	0	7,9	21,1
VARMOST M.TE SIMONE	1870	97	0	8,6	18,4
SELLA NEVEA - LIVINAL LUNC	1837	327	0	9,2	16,2
PIANCAVALLO	1280	0	0	6,4	15,3
TARVISIO	800	0	0	8,3	25,8

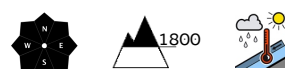

**Snow cover conditions and avalanche danger:** Still very high temperatures, even at altitude. The snowpack is generally stable and well consolidated in the morning, with some superficial crusts, even load-bearing ones. The superficial layers melt from the late morning and releases of small-sized low-cohesive avalanches may occur on the steepest slopes (more than 35 degrees), starting from eastern aspects until the western aspects, going through the South. The melting is emphasised by the presence of desert sand set down on the surface during the last precipitations, to the S the releases may occur to the valley floor and may be slab releases. Possible release of small-sized avalanches of soaked snow from the late morning, triggered even by skiing. Low avalanche danger (1) in the morning, increasing to 2 (moderate) from the late morning.

Forecast for Tuesday 24 April 2018, reliability: 80%

**Possible widespread superficial releases on all aspects.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

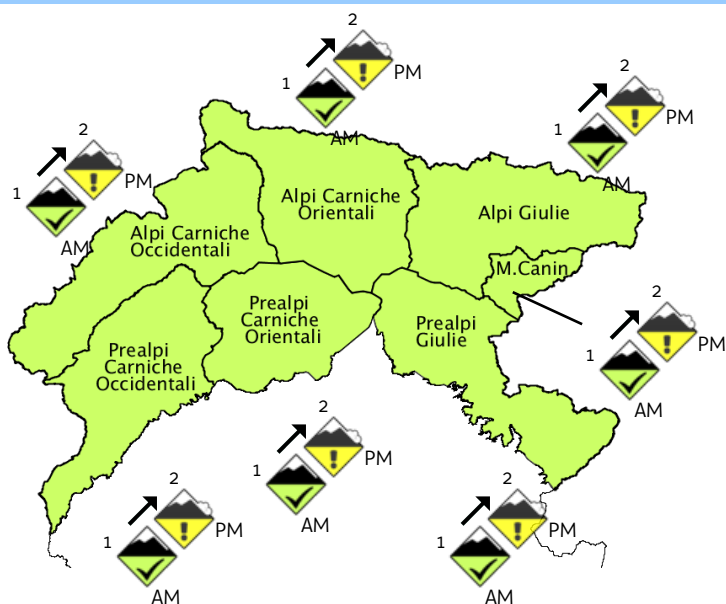

Thermal Zero: 3200 m  
T.average 1000: 14 °C  
T.average 2000: 7 °C

**Weather by OSMER - ARPA FVG:**  
Variable, slight to moderate scattered precipitations. Possible downpours or storms.

**Snow cover conditions and avalanche danger:** On Tuesday a slight weather front will bring some rainfalls up to the highest altitudes. Moderate avalanche danger (2) for the whole day, due to the insufficient nocturnal refreeze. Possible limited releases of low-cohesive snow during the warmest hours on the steepest slopes on all aspects. The triggered release of small-sized avalanches of soaked snow may occur even by skiing from the morning on the steepest slopes.

Forecast for Wednesday 25 April 2018, reliability: 80%

Possible widespread releases during the warmest hours.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 3400 m  
T.average 1000: 13 °C  
T.average 2000: 7 °C

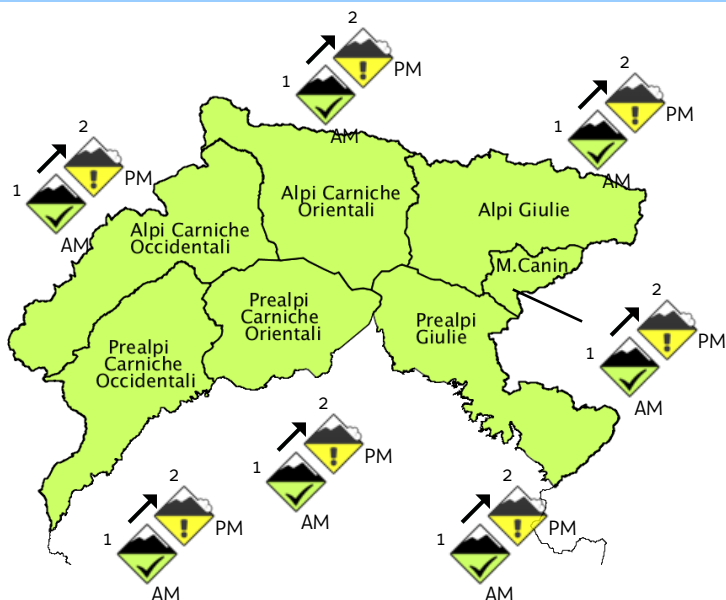

#### Weather by OSMER - ARPA FVG:

Partly cloudy on the Alps, variable on the Prealps where rainfalls are not excluded during the afternoon.

**Snow cover conditions and avalanche danger:** Still very high temperatures at altitude on Wednesday. The lacking cloud cover during the night will favour the refreeze of the superficial layers. Low avalanche danger (1) in the morning, increasing to 2 (moderate) from the late morning. Possible releases of small-sized low-cohesive avalanches on the steepest slopes (more than 35 degrees), starting from the eastern aspects until the western aspects, going through the South. Possible release of small-sized avalanches of soaked snow on the steepest slopes, triggered even by skiing.

Forecast for Thursday 26 April 2018, reliability: 70%

Possible widespread superficial releases on all aspects.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 3200 m  
T.average 1000: 12 °C  
T.average 2000: 6 °C

#### Weather by OSMER - ARPA FVG:

Partly cloudy to variable, probable worsening in the evening with scattered downpours and storms.

**Snow cover conditions and avalanche danger:** A slight weather front will bring downpours on Thursday afternoon, it will rain up to high altitude, but this will not affect the avalanche danger level (still low-1 in the morning and then moderate-2 from the late morning), when releases of small-sized low-cohesive avalanches may occur on the steepest slopes on all aspects. Possible release of small-sized avalanches of soaked snow on the steepest slopes, triggered even by skiing.
