

Situation of 30 November 2018 edition of the hours 14-next update 03-12-2018 hours 14, forecaster: DM

reliability: 80%

**Avalanche danger is low throughout the mountain territory due to a small amount of snow at present**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Giulie

Thermal Zero: 2000 m  
T.average 1000: -1 °C  
T.average 2000: -1 °C

**Weather by OSMER - ARPA FVG:**

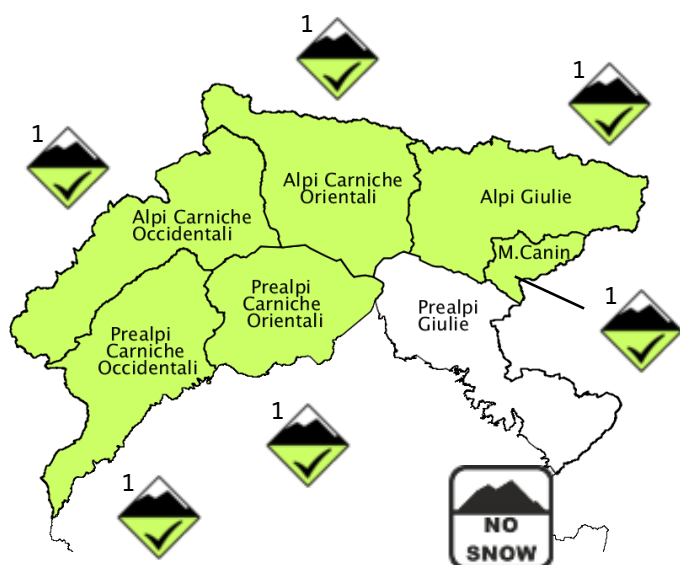

Weather between variable and cloudy due to glazes at high altitude.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	10	0	-2,9	5,5
VARMOST M.TE SIMONE	1870	13	0	-1,5	5,4
SELLA NEVEA - LIVINAL LUNC	1837	47	0	-1,1	1,4
PIANCAVALLO	1280	0	0	-2	5,4
TARVISIO	800	0	0	-3,4	-1,5

**Snow cover conditions and avalanche danger:** On the mountain territory the snow is present only over 1700 m, the thicknesses are minimum 10-20 cm, except for the Julian Alps and the Canin group where the snow cover is more continuous and at an altitude there are about 50-60cm over 2000m the snowpack has been strongly altered by the wind so the snow is mainly accumulated in the gullies and the bowls at times, in surface, icy crusts are present. On the western and central Carnic Pre-Alps, snow is almost exclusively found in the north, while on the eastern ones it is practically absent. The snowpack, where present, is mostly stable and well established up to the highest altitudes. Current avalanche danger: 1 (weak) everywhere.

Forecast for Saturday 01 December 2018, reliability: 80%

**Avalanche danger is low throughout the mountain territory due to a small amount of snow at present**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Giulie

Thermal Zero: 1700 m  
T.average 1000: 1 °C  
T.average 2000: -2 °C

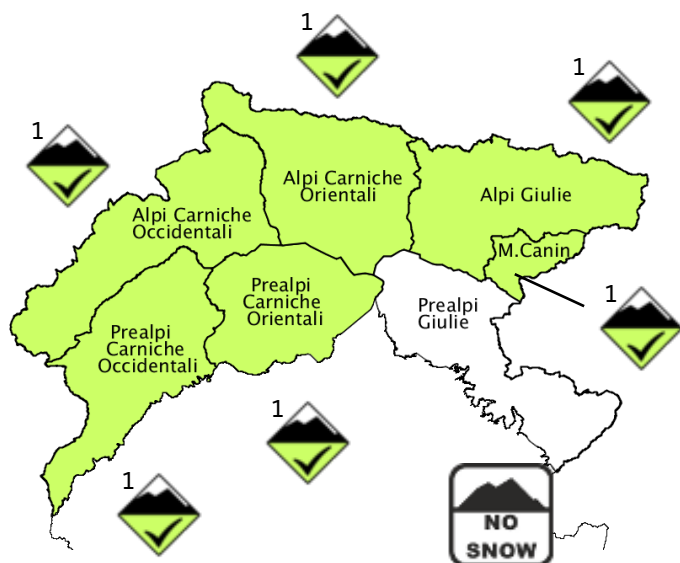

**Weather by OSMER - ARPA FVG:**

Weather between poorly cloudy and variable with winds with breeze

**Snow cover conditions and avalanche danger:** The snow is present over 1700 m only, the thicknesses are minimum 10-20 cm, except for the Julian Alps and the Canin group where the snow cover is more continuous and at an altitude there are about 50-60cm. At a time, in surface the snowpack presents ice sheets. Over 2000m the snowpack has been strongly altered by the wind so that the snow is mainly accumulated in the gullies and the bowls. On the Julian Pre-Alps the snow is almost absent while on the central and western Carnic Pre-Alps is found exclusively in the north. The snowpack, where present, is mostly stable and well established. Current avalanche danger: 1 (weak) everywhere.

Forecast for Sunday 02 December 2018, reliability: 80%

**Avalanche danger is low throughout the mountain territory due to a small amount of snow at present**

Prealpi Giulie

Thermal Zero: 1600 m  
T.average 1000: 2 °C  
T.average 2000: -2 °C

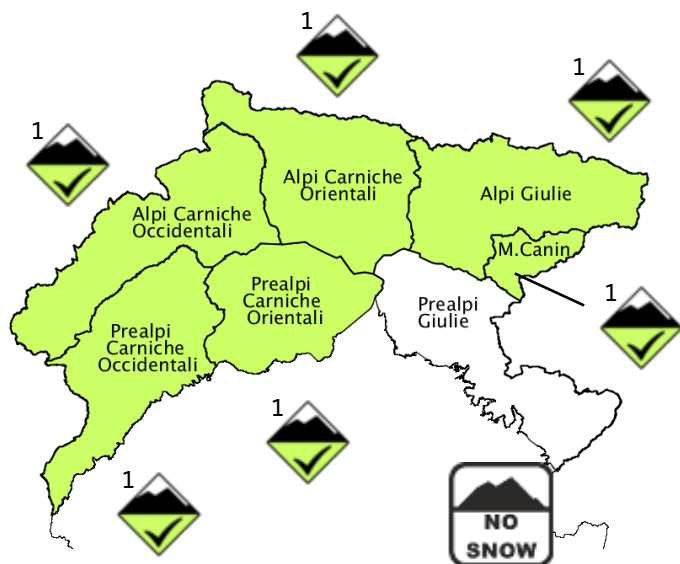

**Weather by OSMER - ARPA FVG:**

Weather poorly cloudy, more clouds between afternoon-evening, minimum temperature rising.

**Snow cover conditions and avalanche danger:** The snow is present over 1700 m only, the thicknesses are minimum 10-20 cm, except for the Julian Alps and the Canin group where the snow cover is more continuous and at an altitude there are about 50-60cm. At a time, in surface the snowpack presents ice sheets. Over 2000m the snow is mainly accumulated in the gullies and the bowls due to wind action. On the Julian Pre-Alps the snow is almost absent while on the central and western Carnic Pre-Alps is found almost exclusively in the north. The snowpack, where present, is mostly stable and well established. Current avalanche danger: 1 (weak) everywhere.

Forecast for Monday 03 December 2018, reliability: 80%

**Avalanche danger is low throughout the mountain territory due to a small amount of snow at present**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Giulie

Thermal Zero: 2800 m  
T.average 1000: 3 °C  
T.average 2000: 2 °C

**Weather by OSMER - ARPA FVG:**

Weather between variable and cloudy due to glazes at high altitude.

**Snow cover conditions and avalanche danger:** The snow is present over 1700 m only, the thicknesses are minimum 10-20 cm, except for the Julian Alps and the Canin group where the snow cover is more continuous and at an altitude there are about 50-60cm. The thermal inversions foreseen at altitude with positive temperatures will benefit the thickening of the superficial crusts. Over 2000m the snow is mainly accumulated in the gullies and the bowls due to wind action. On the Julian Pre-Alps the snow is almost absent while on the central and western Carnic Pre-Alps is almost found exclusively in the north. The snowpack, where present, is mostly stable and well established. Current avalanche danger: 1 (weak) everywhere.
