

AVALANCHE BULLETIN n.11 the 28 December 2018

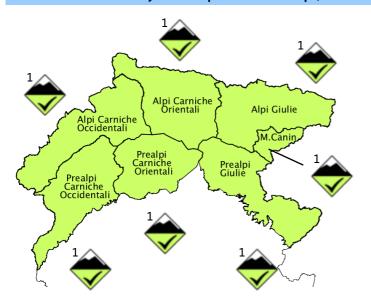

Situation of 28 December 2018 edition of the hours 14-next update 31-12-2018 hours 14, forecaster: GA

reliability: 90%

Isolated accumulations by wind are present on the Alps, to the North and above 2000 m.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alp Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2500 m T.average 1000: 6 °C T.average 2000: 4 °C

Weather by OSMER - ARPA FVG: Mostly variable sky.

| Station | quota (m) | snow depth (cm) | fresh snow (cm) | Tmin (°C) | Tmax (°C) |
|----------------------------|--------------|--------------------|--------------------|--------------|--------------|
| RIFUGIO TAMAI - ZONCOLAN | 1750 | 12 | 0 | 2 | 9 |
| VARMOST M.TE SIMONE | 1870 | 21 | 0 | 2 | 9 |
| SELLA NEVEA - LIVINAL LUNC | 1837 | 59 | 0 | 3 | 5 |
| PIANCAVALLO | 1280 | 0 | 0 | -5 | 7 |
| TARVISIO | 800 | 3 | 0 | -5 | 7 |

Snow cover conditions and avalanche danger: The snowpack has very low thicknesses and is reported to be generally stable and well bonded. On the Alps above an altitude of 2000 m and on the Northern slopes there are localized wind deposits. Such deposits, in areas with more significant thicknesses and on extremely steep slopes, if overloaded, can cause small starting zones locally. The snow cover is indicatively present to the North above 1400/1600 m, at slightly lower altitudes in the Tarvisio area, while is present to the South above 1800-1900 m. At an altitude of 2000 m the thicknesses vary on the North from 35 to 60 cm, from 10 to 40 cm on the South. On the Pre-Alps snow is present almost exclusively to the North and above 1500 m with minimal thicknesses up to the maximum altitudes. Avalanche hazard 1 (weak) everywhere. The avalanche danger is 1 (weak) everywhere.

Forecast for Saturday 29 December 2018, reliability: 90%

Generally stable snowpack and well bonded.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alp Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

0 . NW 20 km/h

Thermal Zero: 2000 m. T.average 1000: 5 °C T.average 2000: 1 °C

Weather by OSMER - ARPA FVG: Generally partly cloudy sky. Thermal inversions in the valleys.

Snow cover conditions and avalanche danger: Good weather with slightly low decrease of maximum temperatures. The avalanche danger is 1 (weak) throughout the whole mountain territory. It is reported a very limited possibility to cause small starting zones. The potentially dangerous points are found on the Alps to the North above an altitude of 2000 m, on extremely steep slopes and are made up of small localized and easily recognizable wind deposits. The snow cover, even if with minimal thicknesses, is indicatively present to the North above 1400/1600 m, at slightly lower altitudes in the Tarvisio area, while is present to the South above 1800-1900 m. At an altitude of 2000 m the thicknesses vary on the North from 35 to 60 cm, from 10 to 40 cm on the South. On the Pre-Alps snow is present almost exclusively to the North and above 1500 m with minimal thicknesses up to the maximum altitudes.

AVALANCHE BULLETIN n.11 the 28 December 2018

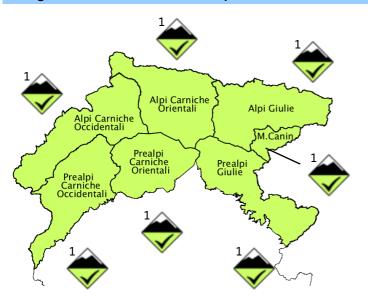

Forecast for Sunday 30 December 2018, reliability: 90%

Strong Northern-Western winds are expected at altitude.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alp Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1300 m T.average 1000: 4 °C T.average 2000: -2 °C

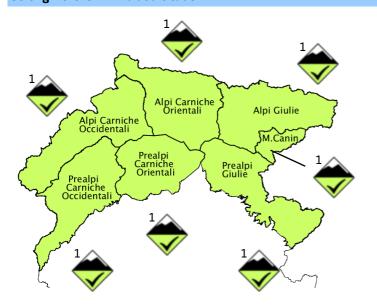

Weather by OSMER - ARPA FVG:

Variable sky. Strong Northern winds at altitude. Possible weak snowfall on the Carnic border ridge.

Snow cover conditions and avalanche danger: Generally variable sky, strong Northern winds at altitude with gusts of wind at 90 km/h. Possible weak snowfall on the Carnic border ridge.Localized wind deposits are present on the Alps to the North above an altitude of 2000 m. Such deposits, in areas with more significant thicknesses and on extremely steep slopes, if overloaded, can cause small starting zones locally. The snow cover is indicatively present to the North above 1400/1600 m, at slightly lower altitudes in the Tarvisio area, while is present to the South above 1800-1900 m. At an altitude of 2000 m the thicknesses vary on the North from 35 to 60 cm, from 10 to 40 cm on the South. On the Pre-Alps snow is present almost exclusively to the North and above 1500 m with minimal thicknesses up to the maximum altitudes. Avalanche danger 1 (weak) everywhere.

Forecast for Monday 31 December 2018, reliability: 80%

Strong Northern wind at altitude.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

0 km/h

Thermal Zero: 1200 m. T.average 1000: 1 °C T.average 2000: -5 °C

Weather by OSMER - ARPA FVG: Variable sky. Strong Northern winds at altitude.

Snow cover conditions and avalanche danger: Avalanche danger is 1 (weak) throughout the mountain territory. Expected variable sky. Strong Northern winds at altitude. On the Alps to the North above an altitude of 2000 m there are localized wind deposits. Such deposits, in areas with more significant thicknesses and on extremely steep slopes, if overloaded, can cause small starting zones locally.
