

AVALANCHE BULLETIN n.12 the 31 December 2018

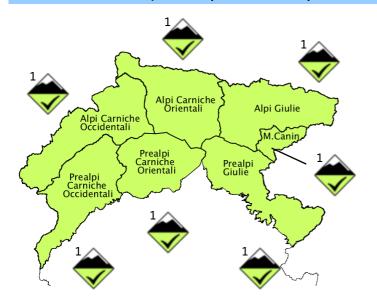

Situation of 31 December 2018 edition of the hours 14-next update 02-01-2019 hours 14, forecaster: GA

reliability: 90%

Isolated accumulations by wind are present on the Alps, to the North and above 2000 m.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alp Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1300 m T.average 1000: 2 °C T.average 2000: -5 °C

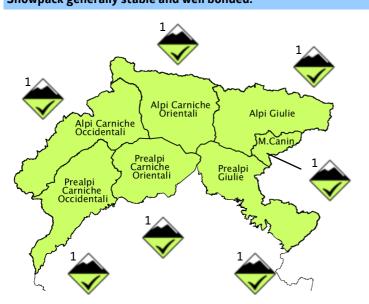

Weather by OSMER - ARPA FVG: Variable sky.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	12	0	-2	1
VARMOST M.TE SIMONE	1870	22	0	-3	1
SELLA NEVEA - LIVINAL LUNC	1837	57	0	-3	-1
PIANCAVALLO	1280	0	0	-1	6
TARVISIO	800	0	0	-5	7

Snow cover conditions and avalanche danger: The snowpack has very low thicknesses and is reported to be generally stable and well bonded. On the Alps above an altitude of 2000 m and on the Northern slopes there are localized wind deposits. Such deposits, in areas with more significant thicknesses and on extremely steep slopes, if overloaded, can cause small starting zones locally. The snow cover is indicatively present to the North above 1400/1600 m, at slightly lower altitudes in the Tarvisio area, while is present to the South above 1900-2000 m. At an altitude of 2000 m the thicknesses vary on the North from 35 to 60 cm, from 5 to 20 cm on the South. On the Pre-Alps snow is present almost exclusively to the North and above 1500 m with minimal thicknesses up to the maximum altitudes. The avalanche danger is 1 (weak) everywhere.

Forecast for Tuesday 01 January 2019, reliability: 90%

Snowpack generally stable and well bonded.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

N 30 km/h

Thermal Zero: 1000 m T.average 1000: 0 °C T.average 2000: 0 °C

Weather by OSMER - ARPA FVG:

From partly cloudy to variable sky. Thermal increase at altitude in the afternoon.

Snow cover conditions and avalanche danger: From partly cloudy to variable sky. Temperature increase at altitude in the afternoon. Avalanche dander is 1 (weak)throughout the mountain territory. Very low possibility to cause small avalanche starting zones. The potentially dangerous points are found on the Alps to the North above an altitude of 2000 m, on extremely steep slopes and are made up of small localized and easily recognizable wind deposits. The snow cover, even if with minimal thicknesses, is indicatively present to the North above 1400/1600 m, at slightly lower altitudes in the Tarvisio area, while is present to the South above 1900-2000 m. At an altitude of 2000 m the thicknesses vary on the North from 35 to 60 cm, from 5 to 20 cm on the South. On the Pre-Alps snow is present almost exclusively to the North and above 1500 m with minimal thicknesses up to the maximum altitudes.

AVALANCHE BULLETIN n.12 the 31 December 2018

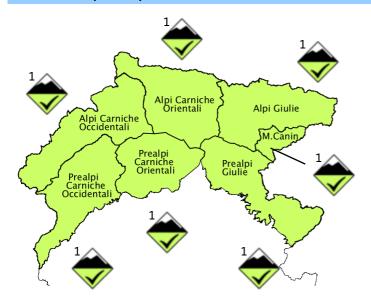

Forecast for Wednesday 02 January 2019, reliability: 90%

Noticeable drop in temperatures.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 800 m T.average 1000: 0 °C T.average 2000: -10 °C

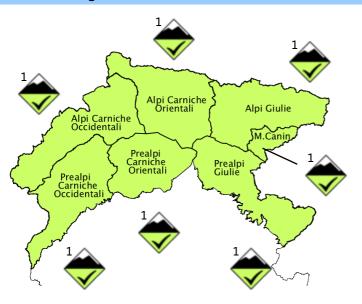

Weather by OSMER - ARPA FVG:

From partly cloudy to variable sky. Noticeable drop in temperatures with wind chill effect at altitude.

Snow cover conditions and avalanche danger: Generally variable sky with strong winds from the North-North West. Noticeable drop in temperatures. On the Alps above an altitude of 2000 m there are localized wind deposits. Such deposits, in areas with more significant thicknesses and on extremely steep slopes, if overloaded, can cause small starting zones locally. The snow cover is indicatively present to the North above 1400/1600 m, at slightly lower altitudes in the Tarvisio area, while is present to the South above 1900-2000 m. At an altitude of 2000 m the thicknesses vary on the North from 35 to 60 cm, from 5 to 20 cm on the South. On the Pre-Alps snow is present almost exclusively to the North and above 1500 m with minimal thicknesses up to the maximum altitudes. The avalanche danger is 1 (weak) everywhere. Possible presence of icy parts is reported, even on snow-free areas.

Forecast for Thursday 03 January 2019, reliability: 90%

Cold with strong wind chill effect at altitude.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 300 m T.average 1000: -5 °C T.average 2000: -15 °C

Weather by OSMER - ARPA FVG:

Partly cloudy sky and strong winds at altitude. Cold with strong wind chill effect.

Snow cover conditions and avalanche danger: Expected partly cloudy sky, average temperatures of -15 °C at 2000 m and with a strong northern wind, which will accentuate the feeling of cold perceived. On the Alps to the North above an altitude of 2000 m there are localized wind deposits. Such deposits, in areas with more significant thicknesses and on extremely steep slopes, if overloaded, can cause small starting zones locally. The avalanche danger is 1 (weak) throughout the mountain territory. Possible presence of icy parts is reported, even on snow-free areas.
