**Snow cover conditions and avalanche danger:** On the Alps, to the North, the ground snow is present indicatively above 1200/1400 m. Minimal thicknesses everywhere. At 2000 m they range from 40 to 60 cm. Above 1800 m the snowpack presents an alternation between areas with unbonded snow and icy parts and small accumulations by wind action extremely localized and visible. If stressed, such accumulations can be released generally with heavy overload. On the Pre-Alps snow is present almost exclusively on the north side, above 1700 m, with minimal thicknesses up to the maximum altitudes. Avalanche hazard level: 1 (weak) everywhere. Possible dangerous falls on icy parts.

## Forecast for Tuesday 18 December 2018, reliability: 70%

# Avalanche danger is low throughout the mountain territory.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

N 20 km/h

Thermal Zero: 700 m T.average 1000: -1 °C T.average 2000: -5 °C

Weather by OSMER - ARPA FVG: Clear sky or partly cloudy.

Snow cover conditions and avalanche danger: Good weather. On the Alps, to the north, the ground snow is present indicatively above 1200/1400 m. Minimal thicknesses everywhere. At 2000 m they range from 40 to 60 cm. Above 1800 m the snowpack presents an alternation between areas with unbonded snow and icy parts and small accumulations by wind action extremely localized and visible. If stressed, such accumulations can be released generally with heavy overload. On the Pre-Alps snow is present almost exclusively on the north side, above 1700 m, with minimal thicknesses up to the maximum altitudes. Avalanche hazard level: 1 (weak) everywhere. Possible dangerous falls on icy parts.

# **AVALANCHE BULLETIN** n.6 the 17 December 2018

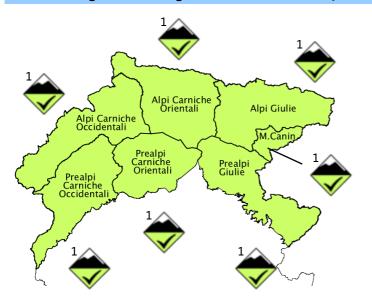

# Forecast for Wednesday 19 December 2018, reliability: 70%

#### Avalanche danger is low throughout the mountain territory.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alp Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 600 m T.average 1000: -3 °C T.average 2000: -1 °C

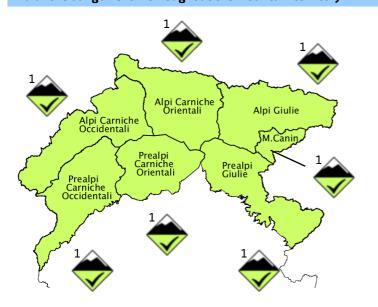

#### Weather by OSMER - ARPA FVG:

Variable cloudiness, more consistent from the afternoon. Increasing temperatures at altitude. Worse in the night.

Snow cover conditions and avalanche danger: Partly cloudy sky in the morning, variable from the afternoon. On the Alps, to the north, the ground snow is present indicatively above 1200/1400 m. Minimal thicknesses everywhere. At 2000 m they range from 40 to 60 cm. Above 1800 m the snowpack presents an alternation between areas with unbonded snow and icy parts and small accumulations by wind action extremely localized and visible. If stressed, such accumulations can be released generally with heavy overload. On the Pre-Alps snow is present almost exclusively on the north side, above 1700 m, with minimal thicknesses up to the maximum altitudes. Avalanche hazard level: 1 (weak) everywhere. Possible dangerous falls on icy parts.

## Forecast for Thursday 20 December 2018, reliability: 60%

# Avalanche danger is low throughout the mountain territory.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

0 SW 30 km/h

Thermal Zero: 800 m T.average 1000: 0 °C T.average 2000: -5 °C

#### Weather by OSMER - ARPA FVG:

Weak snowfalls over 400/600 m on the Alps and on the Pre-Alps at higher altitudes.

Snow cover conditions and avalanche danger: Expected slight snowfalls above 400/600 m throughout the mountain territory. The southern winds that will accompany the precipitation may favor the formation of new small accumulations on the northern slopes. The new snow, on the Alps, in particular on the Julian and on the Canin, will cover the small accumulations of wind crust present already. On the North, abovex 1800 m, on very steep slopes where wind accumulations are present, it is possible to originate small releases generally with a high overload. Avalanche hazard level: 1 (weak) everywhere. Possible dangerous falls on icy parts.
