

Situation of 19 December 2018 edition of the hours 14-next update 21-12-2018 hours 14, forecaster: MM

reliability: 90%

Avalanche danger is low throughout the mountain territory.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 700 m
T.average 1000: -1 °C
T.average 2000: -3 °C

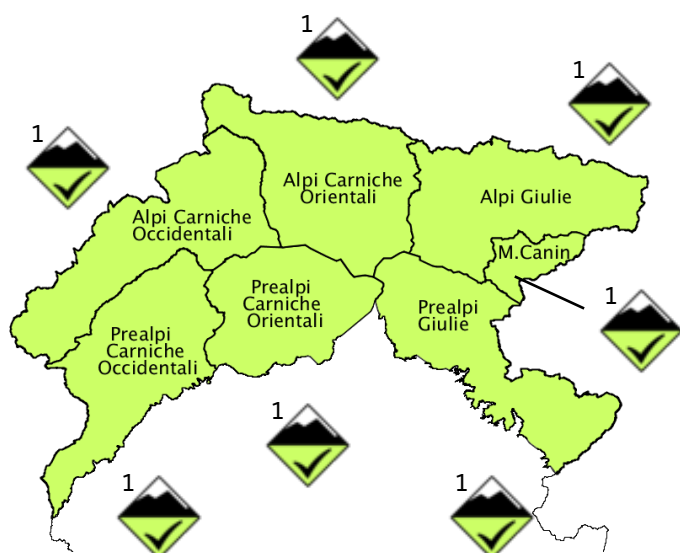

Weather by OSMER - ARPA FVG:
Overcast sky, very weak snow falls at night.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	15	0	-8,5	2
VARMOST M.TE SIMONE	1870	26	0	-7	1
SELLA NEVEA - LIVINAL LUNC	1837	54	0	-6,5	-4
PIANCAVALLO	1280	0	0	-5	3
TARVISIO	800	2	0	-8,5	3

Snow cover conditions and avalanche danger: Overcast sky, very weak snow falls at night. On the Alps, on the North, the ground snow is present indicatively above 1400/1600 m, at slightly lower altitudes in some areas of the Tarvisio, while is present above 1700 on the South. Minimal thicknesses everywhere, at 2000 m they range from 40 to 60 cm. The snowpack has good firmness with the presence of a breakable surface crust almost everywhere that alternates, in the gullies and bowls, small and very isolated accumulations of unbonded snow carried by the wind. Icy parts are also reported that may cause dangerous falls. On the North, above 1800 m, on very steep slopes where accumulations by wind are present, it is possible to originate small starting zones. On the Pre-Alps snow is present almost exclusively on the North side, above 1700 m, with minimal thicknesses up to the maximum altitudes. Avalanche hazard level: 1 (weak) everywhere.

Forecast for Thursday 20 December 2018, reliability: 80%

Avalanche danger is low throughout the mountain territory.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

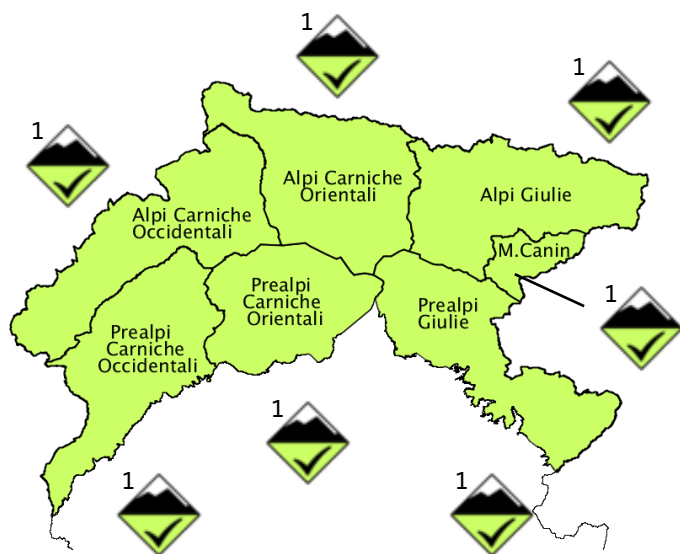

Thermal Zero: 800 m
T.average 1000: 0 °C
T.average 2000: -5 °C

Weather by OSMER - ARPA FVG:
Overcast sky with very weak snowfalls.

Snow cover conditions and avalanche danger: Very weak snow falls are expected (1 cm) above 300/400 m throughout the mountain territory. The new snow will deposit on the snowpack, where present, with good firmness that consists of a breakable surface crust almost everywhere that alternates, in the gullies and bowls, with small and very isolated accumulations of unbonded snow carried by the wind. Icy parts are also reported that may cause dangerous falls. On the North, above 1800 m, on very steep slopes where accumulations by wind are present, it is possible to originate small starting zones. Snow is present on the Pre-Alps almost exclusively on the North side with a certain thickness above 1700 m, with minimal thicknesses up to the maximum altitudes. Avalanche hazard level: 1 (weak) everywhere.

Forecast for Friday 21 December 2018, reliability: 70%

Avalanche danger is low throughout the mountain territory.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

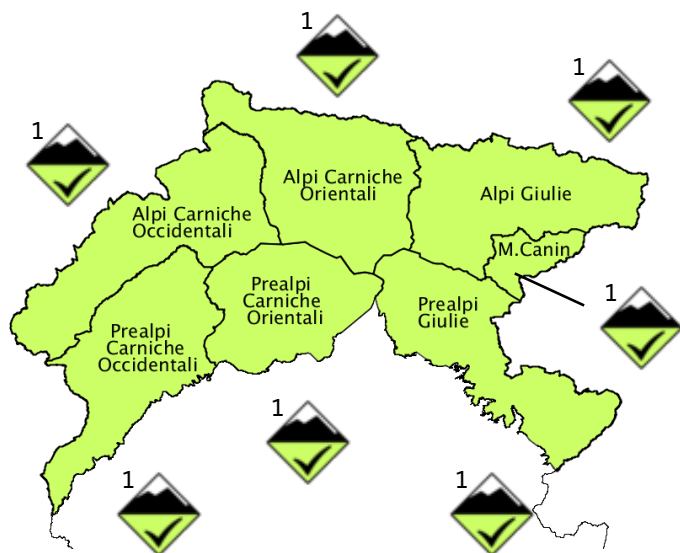

Thermal Zero: 700 m
T.average 1000: 0 °C
T.average 2000: -3 °C

Weather by OSMER - ARPA FVG:
Variable to cloudy sky.

Snow cover conditions and avalanche danger: Variable to cloudy sky. The mountain territory, above 300/400 m will have a snow cover, even if a minimal one. Greater thicknesses on the Alps, generally above 1800 m, where the snowpack has a good firmness. A breakable surface crust is present almost everywhere that alternates, in the gullies and bowls, with small and very isolated accumulations of unbonded snow carried by the wind. Also, there are icy parts that may cause dangerous falls. On the North, above 1800 m, on very steep slopes where accumulations by wind are present, it is possible to originate small starting zones. Snow is present on the Pre-Alps almost exclusively on the North side with a certain thickness above 1700 m, with minimal thicknesses up to the maximum altitudes. Avalanche hazard level: 1 (weak) everywhere.

Forecast for Saturday 22 December 2018, reliability: 70%

Avalanche danger is low throughout the mountain territory.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1500 m
T.average 1000: 2 °C
T.average 2000: 4 °C

Weather by OSMER - ARPA FVG:
Partly cloudy, increase of the temperatures.

Snow cover conditions and avalanche danger: Partly cloudy sky, strong winds from W with increase of the temperatures and heat at high altitudes. The snowpack has a good firmness and characterized by a breakable surface crust almost everywhere that alternates, in the gullies and bowls, with small and very isolated accumulations of unbonded snow carried by the wind. Icy parts are also reported that may cause dangerous falls. On the North, above 1800 m, on very steep slopes where accumulations by wind are present, it is possible to originate small starting zones. Snow is present on the Pre-Alps almost exclusively on the North side with a certain thickness above 1700 m, with minimal thicknesses up to the maximum altitudes. Avalanche hazard level: 1 (weak) everywhere.
