

Situation of 09 January 2019 edition of the hours 14-next update 11-01-2019 hours 14, forecaster: AM

reliability: 90%

Single wind deposits are present on the Alps to the North and above an altitude of 2000 m.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 900 m
T.average 1000: 0 °C
T.average 2000: -8 °C

Weather by OSMER - ARPA FVG:
Mainly little cloudy sky in the morning. 30 Km/h wind from the North.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	9	0	-7	-4
VARMOST M.TE SIMONE	1870	0	0	-7	-2
SELLA NEVEA - LIVINAL LUNC	1837	61	0	-6	-3
PIANCAVALLO	1280	0	0	-2	-1
TARVISIO	800	0	0	-4	3

Snow cover conditions and avalanche danger: Mainly little cloudy sky. Freezing level at 900 m. Weak snowfalls have affected the mountain territory. On the Alps above an altitude of 2000 m and on the Northern slopes there are localized wind deposits. On Julian Alps, in areas where such deposits have more significant thicknesses and on extremely steep slopes, they can cause moderate starting zones locally if overloaded. The snow presents everywhere minimal thicknesses, except for the Julian Alps where at the altitude of 2000 m the thicknesses vary on the North from 30-60 cm while on the south they vary from 5 to 15 cm. Avalanche danger 1 (weak) throughout the mountain territory. Icy parts are present.

Forecast for Thursday 10 January 2019, reliability: 90%

Generally stable and well bonded snowpack.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 700 m
T.average 1000: -1 °C
T.average 2000: -10 °C

Weather by OSMER - ARPA FVG:
From little cloudy to variable sky. Moderate winds from the North.

Snow cover conditions and avalanche danger: The snowpack presents very limited thicknesses and is reported to be generally stable and well bonded. On the Alps above an altitude of 2000 m and on the Northern slopes there are localized wind deposits. On Julian Alps, in areas where such deposits have more significant thicknesses and on extremely steep slopes, they can cause moderate starting zones locally if overloaded. The snow presents minimal thicknesses everywhere, except for the Julian Alps where at the altitude of 2000 m the thicknesses vary on the North from 30-60 cm while on the South they vary from 5 to 15 cm. Avalanche danger 1 (weak) throughout the mountain territory. Icy parts are present.

Forecast for Friday 11 January 2019, reliability: 80%

Significant decrease in temperatures.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 500 m
T.average 1000: -2 °C
T.average 2000: -11 °C

Weather by OSMER - ARPA FVG:
Clear sky. It will be colder below freezing level almost anywhere at night.

Snow cover conditions and avalanche danger: Good weather with decreasing temperatures and moderate wind from the North. Avalanche danger 1 (weak) throughout the mountain territory. On the Alps above an altitude of 2000 m and on the Northern slopes there are localized wind deposits. On Julian Alps, in areas where such deposits have more significant thicknesses and on extremely steep slopes, they can cause moderate starting zones locally if overloaded. The snow presents minimal thicknesses everywhere, except for the Julian Alps where at the altitude of 2000 m the thicknesses vary on the North from 30-60 cm while on the South they vary from 5 to 15 cm. Avalanche danger 1 (weak) throughout the mountain territory. Icy parts are present.

Forecast for Saturday 12 January 2019, reliability: 80%

Generally stable and well bonded snowpack.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 600 m
T.average 1000: -2 °C
T.average 2000: -6 °C

Weather by OSMER - ARPA FVG:
Little cloudy sky. With rising temperatures.

Snow cover conditions and avalanche danger: Little cloudy sky. Freezing level at 600 m. On the Alps above an altitude of 2000 m and on the Northern slopes there are localized wind deposits. On Julian Alps, in areas where such deposits have more significant thicknesses and on extremely steep slopes, they can cause moderate starting zones locally if overloaded. Avalanche danger 1 (weak) throughout the mountain territory.
