

# AVALANCHE BULLETIN n.17 the 11 January 2019

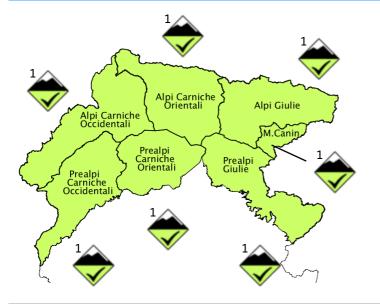

Situation of 11 January 2019 edition of the hours 14-next update 11-01-2019 hours 14, forecaster: GA

reliability: 90%

#### Single wind deposits are present on the Alps to the North and above an altitude of 2000 m.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 400 m T.average 1000: -3 °C T.average 2000: -12 °C

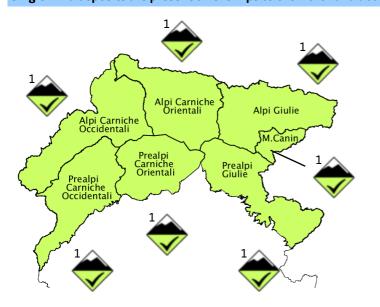

Weather by OSMER - ARPA FVG: Clear sky.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	8	0	-10	-5
VARMOST M.TE SIMONE	1870	0	0	-11	-5
SELLA NEVEA - LIVINAL LUNC	1837	64	0	-11	-7
PIANCAVALLO	1280	0	0	-8	0
TARVISIO	800	0	0	-9	4

**Snow cover conditions and avalanche danger:** Avalanche danger 1 (weak) throughout the mountain territory. Localized wind deposits are present on the Alps above an altitude of 2000 m. Such deposits, on extremely steep slopes and areas with more significant thicknesses, they can still cause moderate starting zones locally if overloaded. This extremely localized condition is mainly present on the Northern slopes of the Julian and Canin Alps. The snow cover has minimal thicknesses everywhere, sometimes it is not constant or absent up to the maximum altitude, especially on the Southern slopes. On the Julian and Canin Alps it is more constant and the thicknesses vary at an altitude of 2000 m between 30 and 60 cm on the Northern slopes and between 5 and 15 cm on the Southern ones. The snowpack at altitude is mainly compact and sometimes frozen.

Forecast for Saturday 12 January 2019, reliability: 90%

### Single wind deposits are present on the Alps to the North and above an altitude of 2000 m.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

N 20 km/h

Thermal Zero: 1000 m T.average 1000: -1 °C T.average 2000: -6 °C

Weather by OSMER - ARPA FVG: Variable sky.

**Snow cover conditions and avalanche danger:** Variable sky expected. The snowpack on the regional territory presents everywhere minimal thicknesses and sometimes it is not constant or absent up to the highest altitudes in many areas, particularly on the Southern slopes. It is more constant on the Julian and Canin Alps only, particularly on the North, but with thicknesses significantly below the average of the period, which vary at 2000 m of altitude, between 30 and 60 cm on the Northern slopes and between 5 and 15 cm on the Southern ones. The snowpack at altitude, where present, is mainly compact and with frozen parts. The avalanche danger is 1 (weak) everywhere. Wind deposits are located on the Alps above 2000 m of altitude. Such deposits, on extremely steep slopes and in areas with more significant thicknesses, if overloaded, can still cause small starting areas. This extremely localized condition is mainly present on the Northern slopes of the Julian and Canin Alps.

NW 20 km/h

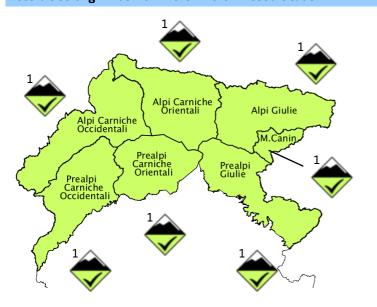

Thermal Zero: 1200 m T.average 1000: 1 °C T.average 2000: -3 °C

Weather by OSMER - ARPA FVG: Sky little cloudy mainly.

Snow cover conditions and avalanche danger: Nice weather. Avalanche danger is 1 (weak) throughout the mountain territory. Localized wind deposits are present on the Alps above an altitude of 2000 m. Such deposits, on extremely steep slopes and areas with more significant thicknesses, if overloaded, can still cause small starting zones. This extremely localized condition is mainly present on the Northern slopes of the Julian and Canin Alps. The snow cover on the regional territory presents everywhere minimal thicknesses and sometimes it is not constant or absent up to the highest altitudes in many areas, particularly on the Southern slopes. It is more constant on the Julian and Canin Alps only, particularly on the North, but with thicknesses significantly below the average of the period, which vary at an altitude of 2000 m, between 30 and 60 cm on the Northern slopes and between 5 and 15 cm on the Southern ones. Pay attention to the presence of icy parts or with very hard and packed snow.

#### Forecast for Monday 14 January 2019, reliability: 80%

### Possible strong winds from North-Nort hWest altitude.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1000 m T.average 1000: 0 °C T.average 2000: -3 °C

## Weather by OSMER - ARPA FVG:

Sky little cloudy, possible strong Northern winds at altitude and some very weak snowfalls on the Austria border.

**Snow cover conditions and avalanche danger:** Sky generally little cloudy. Possible very weak snowfalls at night on the border with Austria. Possible brisk or strong Northern winds. Avalanche danger is 1 (weak) throughout the mountain territory. Localized wind deposits are present on the Alps above an altitude of 2000 m. Such deposits, on extremely steep slopes and areas with more significant thicknesses, if overloaded, can still cause small starting zones. This extremely localized condition is mainly present on the Northern slopes of the Julian and Canin Alps.
