

Situation of 04 February 2019 edition of the hours 14-next update 06-02-2019 hours 14, forecaster: MM

reliability: 80%

Danger of both natural and caused avalanches due to snow not bonded yet.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 900 m
T.average 1000: -2 °C
T.average 2000: -5 °C

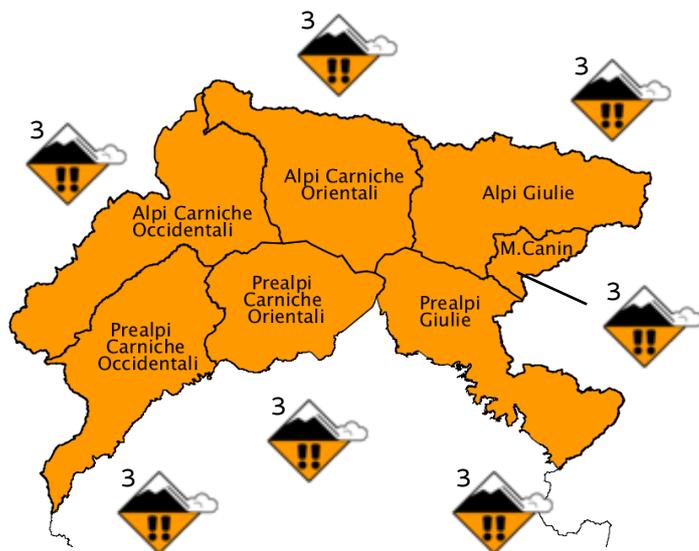

Weather by OSMER - ARPA FVG:
Clear skies over the whole region.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	117	15	-9	0
VARMOST M.TE SIMONE	1870	134	20	-8	-1
SELLA NEVEA - LIVINAL LUNC	1837	227	20	-9	0
PIANCAVALLO	1280	29	15	-6	1
TARVISIO	800	53	15	-5	4

Snow cover conditions and avalanche danger: The region has been affected by a strong disturbance that has brought significant quantities of snow above 1500 m in particular. (170 cm Canin/80-120 cm Carnia area). At lower altitudes there has been an intermittent snowfalls and rainfalls and the thicknesses are about 20-40 cm. Where the precipitations were more abundant, combined with the presence of weak basal layers in the old snowpack, there were some natural triggerings, also of large dimensions, leading to a partial cleaning of the most dangerous sites. There is still the possibility of natural avalanches triggering, even of large dimensions, on unloaded sites, on all sides but especially on the sun-exposed ones, even on the most steep meadows slopes. Possible triggering caused also at a single skier/hiker passage, on all the exposures in particular in areas where the presence of wind deposits is greater. Danger level is 3 (considerable) everywhere.

Forecast for Tuesday 05 February 2019, reliability: 70%

Danger of both natural and caused avalanches due to snow not bonded yet.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

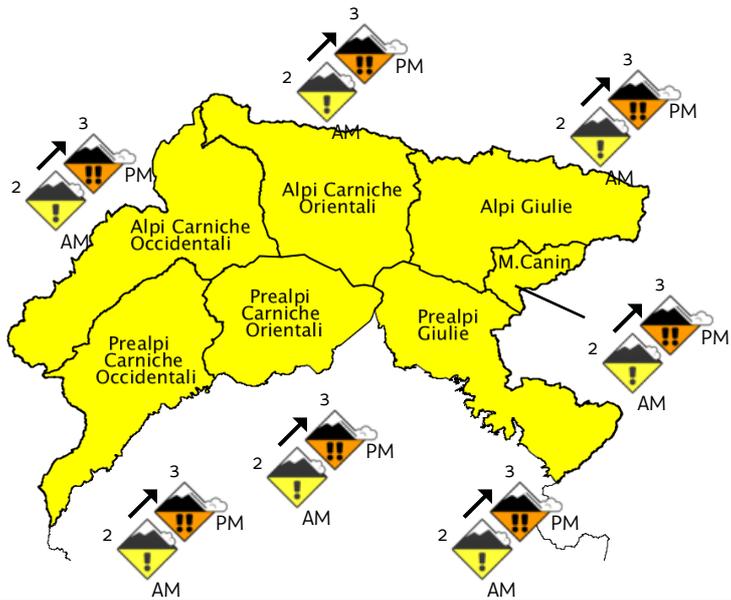

Thermal Zero: 1600 m
T.average 1000: -1 °C
T.average 2000: -2 °C

Weather by OSMER - ARPA FVG:
Mostly clear skies, thermal inversion in the valleys.

Snow cover conditions and avalanche danger: Good weather. The snowpack is increasing firmness, there is still the possibility of natural avalanches triggering of medium size in sites not yet unloaded, from the usual avalanche routes and along the gullies, generally above an altitude of 1500 m, on all sides and especially on the sun-exposed ones. Ground avalanches are also possible at Southern exposures on the steepest meadow slopes. Possible triggering caused also at a single skier/hiker passage, on all the exposures in particular in areas where the presence of wind deposits is greater. Danger level is 3 (considerable) everywhere.

Forecast for Wednesday 06 February 2019, reliability: 70%

Danger increasing up to 3 (considerable) in the hottest hours of the day.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

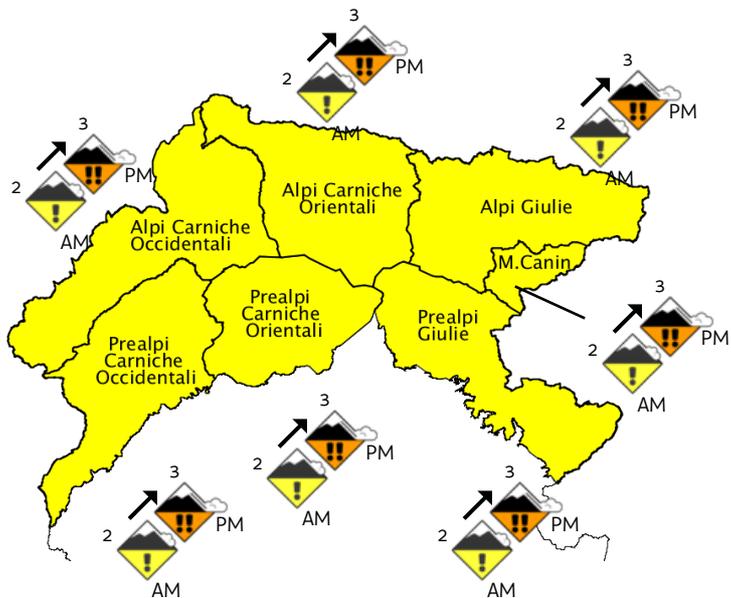

Thermal Zero: 2400 m
T.average 1000: 1 °C
T.average 2000: 1 °C

Weather by OSMER - ARPA FVG:
Mostly clear skies, thermal inversion in the valleys.

Snow cover conditions and avalanche danger: Still good weather and increase in temperatures. Freezing level even above 2000 m with thermal inversion. The natural avalanche activity will be relevant during the hottest hours of the day and especially on the sun-exposed slopes. Along the steepest gullies, both loose snow and slabs avalanches are still possible, even of medium dimensions and ground avalanches on the steepest slopes. The caused triggering will be possible even with a low additional overload, generally above the forest limit, at all the exposures, especially in areas where the presence of wind deposits is greater. Danger level is 2 (moderate) increasing up to 3 (considerable) during the hottest hours.

Forecast for Thursday 07 February 2019, reliability: 60%

Danger increasing up to 3 (considerable) in the hottest hours of the day.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2600 m
T.average 1000: 1 °C
T.average 2000: 1 °C

Weather by OSMER - ARPA FVG:
Mostly clear skies, evident thermal inversion.

Snow cover conditions and avalanche danger: Still prevalence of good weather and further increase in freezing level up to about 2600 m and still thermal inversion in the lower layers. The snowpack is increasing firmness. Especially on sunmore exposed slopes, during the hottest hours, there is still the possibility of both loose snow and slab avalanches triggering of medium size, even ground avalanches on the steepest meadow slopes. The caused triggering, always during the hottest hours, it will be possible even with a low additional load generally over the forest limit, at all the exposures, but in particular where the biggest wind deposits are. Danger level 2 (moderate) is increasing up to 3 (considerable) during the hottest hours.
