

Situation of 06 February 2019 edition of the hours 14-next update 08-02-2019 hours 14, forecaster: MM

reliability: 80%

Increasing danger up to 3 (considerable) during the hottest hours of the day.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2000 m
T.average 1000: 1 °C
T.average 2000: 0 °C

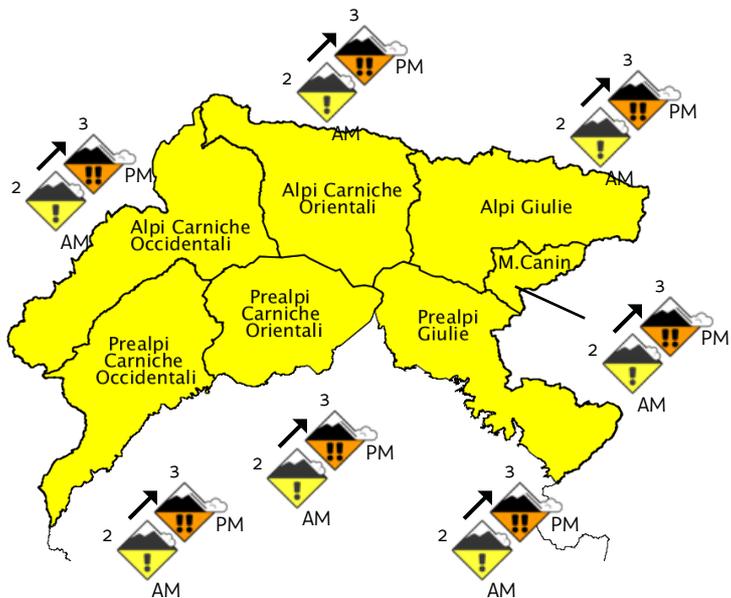

Weather by OSMER - ARPA FVG:
Clear or little cloudy skies in the morning.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	106	0	-5	4
VARMOST M.TE SIMONE	1870	115	0	-1	6
SELLA NEVEA - LIVINAL LUNC	1837	211	0	-5	-1
PIANCAVALLO	1280	29	0	-2	-4
TARVISIO	800	51	0	-10	-4

Snow cover conditions and avalanche danger: Mostly clear skies with freezing level at about 2000 m with thermal inversion. At altitude there was a strong wind activity which created further deposits. The increase in temperatures leads to the possibility of both loose and slabs avalanches, small and medium, along the gullies and the steepest slopes, especially at Southern exposures. Triggering can be possible even with low additional load under the ridges and the steeper crossings, located above 2000 m where the most substantial deposits are. Even at lower altitudes during the hottest hours. Danger level is 2 (moderate) increasing up to 3 (considerable) everywhere.

Forecast for Thursday 07 February 2019, reliability: 70%

Increasing danger up to 3 (considerable) during the hottest hours of the day.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

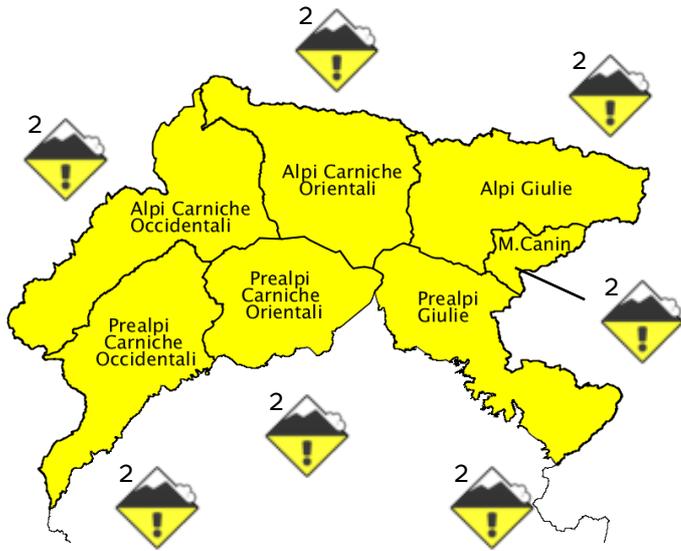

Thermal Zero: 2500 m
T.average 1000: 1 °C
T.average 2000: 1 °C

Weather by OSMER - ARPA FVG:
Clear or little cloudy in the morning. Slight low clouds in the evening.

Snow cover conditions and avalanche danger: Clear or little cloudy skies and further increase in temperatures with increase in freezing level up to about 2500 m. The further increase in temperatures will still lead to the possibility of both loose and slabs avalanches, of small and medium dimensions, along the gullies and the steepest slopes, especially at Southern exposures. Triggering can be possible even with low additional load under the ridges and the steeper crossings, located above 2000 m where the most substantial deposits are. Even at lower altitudes during the hottest hours. Danger level is 2 (moderate) increasing up to 3 (considerable) everywhere.

Forecast for Friday 08 February 2019, reliability: 70%

Danger 2 (moderate), but still possible to cause triggering even with a low additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

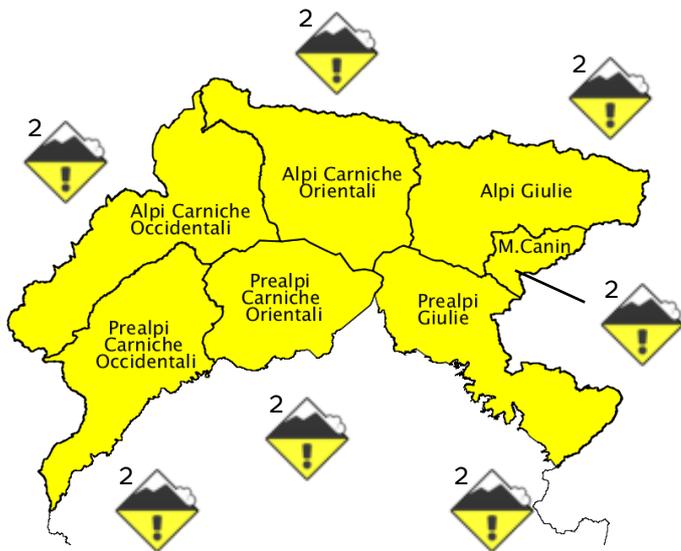

Thermal Zero: 1400 m
T.average 1000: 2 °C
T.average 2000: -4 °C

Weather by OSMER - ARPA FVG:
Mostly little cloudy skies.

Snow cover conditions and avalanche danger: Cloudier day compared to the previous days but with drop in temperatures. The snowpack is increasing firmness. The natural avalanche activity will generally be limited to triggerings from the steepest slopes. It will be possible to cause triggering even with low additional load, under the ridges and the steeper crossings, located above 2000 m where the most substantial deposits are. Danger level is 2 (moderate) everywhere.

Forecast for Saturday 09 February 2019, reliability: 60%

Danger 2 (moderate), but still possible to cause triggering even with a low additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1200 m
T.average 1000: 0 °C
T.average 2000: -3 °C

Weather by OSMER - ARPA FVG:
Clear or little cloudy skies.

Snow cover conditions and avalanche danger: Temperatures still slightly decreasing. The snowpack is generally leading to greater firmness. The natural avalanche activity will generally be limited to triggerings from the steepest slopes. It will be possible to cause triggering even with low additional load, under the steepest ridges and crossing located above 2000 m where the most substantial deposits are. Danger level is 2 (moderate) everywhere.
