

Situation of 22 February 2019 edition of the hours 14-next update 25-02-2019 hours 14, forecaster: MM

reliability: 90%

Possible new deposits due to strong winds from North.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 1900 m
T.average 1000: 8 °C
T.average 2000: 1 °C

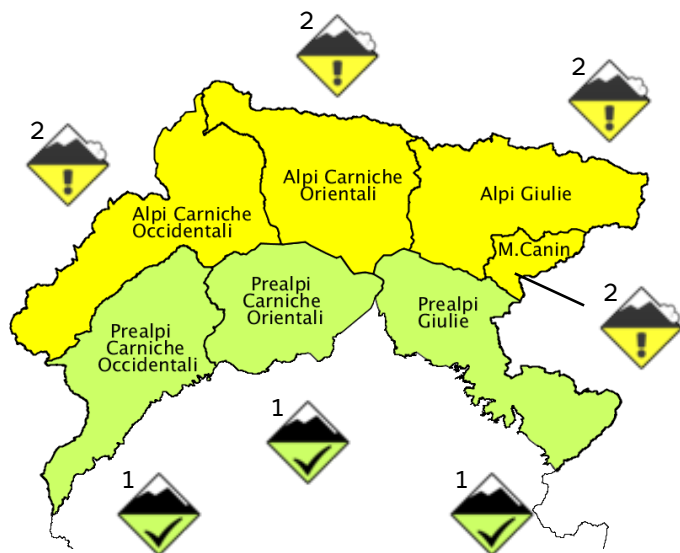

Weather by OSMER - ARPA FVG:
Variability on the border's ridge. Strong winds from North.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	84	0	0	10
VARMOST M.TE SIMONE	1870	84	0	0	8
SELLA NEVEA - LIVINAL LUNC	1837	217	0	1	6
PIANCAVALLO	1280	11	0	2	8
TARVISIO	800	24	0	-1	14

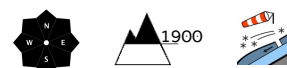

Snow cover conditions and avalanche danger: Variability on the border's ridges with strong winds from North. On the Carnic and Julian Alps and Canin danger is 2 (moderate): generally above 2000 m and to the North, snowdrift deposits are present and not always well bonded to the underlying snow. Due to the expected winds new small deposits could be generated on the other slopes as well. On the Northern slopes and in the most shaded areas, there are still weak basal layers. Therefore on very steep slopes it is possible to start triggering of small/medium size especially with high additional load. Locally, on the new formed deposits, triggering of small avalanches with low additional load is not excluded. Danger 1 (low) on Carnic and Julian Pre-Alps: to the North, on the extremely steep slopes, triggering of small avalanches is possible at higher altitudes, especially with high additional load.

Forecast for Saturday 23 February 2019, reliability: 80%

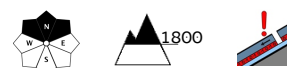

Decrease in temperatures and strong wind from North-East at altitude.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

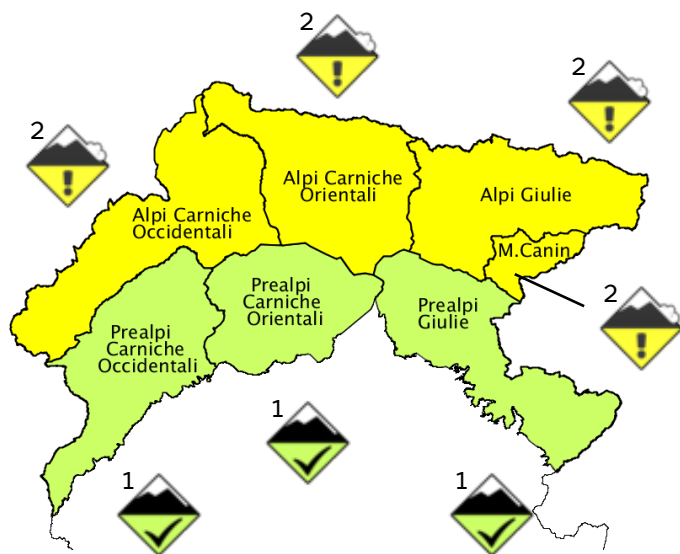

Thermal Zero: 800 m
T.average 1000: -2 °C
T.average 2000: -5 °C

Weather by OSMER - ARPA FVG:
Clear skies or little cloudy. Strong winds from North-East.

Snow cover conditions and avalanche danger: Decrease in temperatures with freezing feeling at 800 m with strong winds from North-East. On Carnic and Julian Alps and on Canin danger is 2 (moderate): there are isolated wind deposits, but the strong winds expected can create new ones on the other slopes as well. To the North and in the most shaded areas, there are still weak basal layers. Therefore on very steep slopes it is possible to start triggering of small/medium size especially with high additional load. Locally, on the new formed deposits, triggering of small avalanches with low additional load is not excluded. Danger 1 (low) on Carnic and Julian Pre-Alps: to the North, on the extremely steep slopes, triggering of small avalanches is possible at higher altitudes, especially with high additional load. Possible icy sections everywhere.

Forecast for Sunday 24 February 2019, reliability: 80%

Possible new deposits due to wind from North-East

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

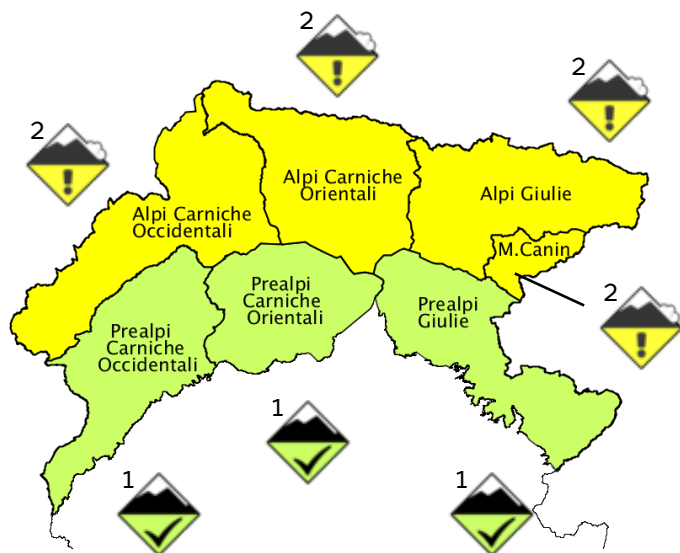

Thermal Zero: 1700 m
T.average 1000: -1 °C
T.average 2000: -2 °C

Weather by OSMER - ARPA FVG:
Clear skies or little cloudy

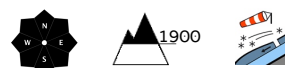

Snow cover conditions and avalanche danger: Clear skies or little cloudy, still strong winds from North-East but decreasing compared to the previous day and increase in temperatures. On Carnic and Julian Alps and on Canin danger is 2 (moderate): above 1900 m there are isolated snowdrift deposits, but the strong winds expected can create new ones on the other slopes as well. To the North and in the most shaded areas, there are still weak basal layers. Therefore on very steep slopes it is possible to start triggering of small/medium size especially with high additional load. Locally, on the new formed deposits especially if laying on icy layers, triggering of small avalanches with low additional load is not excluded. Danger 1 (low) on Carnic and Julian Pre-Alps: to the North, on the extremely steep slopes, triggering of small avalanches is possible at higher altitudes, especially with high additional load. Possible icy sections everywhere.

Forecast for Monday 25 February 2019, reliability: 70%

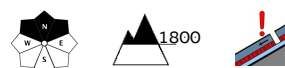

There are snowdrift deposits above 1900 m.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 2200 m
T.average 1000: 5 °C
T.average 2000: 1 °C

Weather by OSMER - ARPA FVG:
Clear skies or little cloudy.

Snow cover conditions and avalanche danger: Increase in temperatures with freezing level at 2200 m. On Carnic and Julian Alps and on Canin danger is 2 (moderate): on deposit areas, on very steep slopes above 1900 m it is possible to start triggering of small/medium size especially with high additional load. Locally, on the new formed deposits, triggering of small avalanches with low additional load on the new deposits is not excluded especially if laying on icy layers. Danger 1 (low) on Carnic and Julian Pre-Alps: to the North, on the extremely steep slopes, triggering of small avalanches is possible at higher altitudes, especially with high additional load. Possible icy sections everywhere especially in the morning.
