

Situation of 01 April 2019 edition of the hours 14-next update 03-04-2019 hours 14, forecaster: MA

reliability: 80%

Mainly stable and well bonded snow cover.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

E 20  
km/h

Thermal Zero: 2300 m  
T.average 1000: 10 °C  
T.average 2000: 2 °C

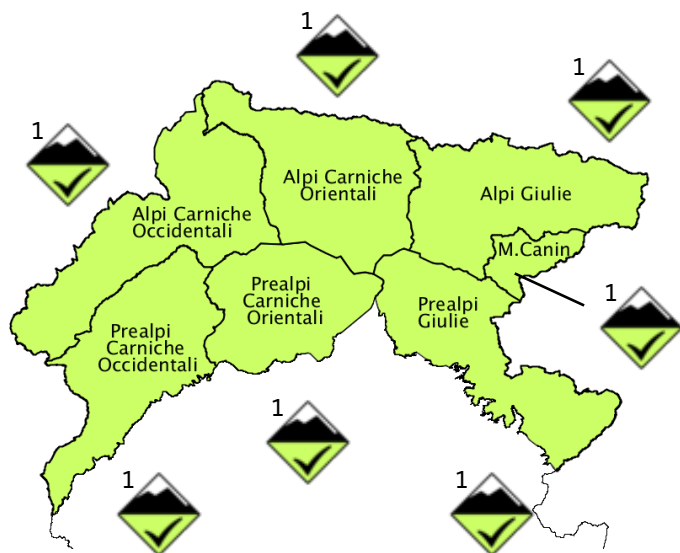

**Weather by OSMER - ARPA FVG:**  
Clear or little cloudy skies.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	66	0	2	12
VARMOST M.TE SIMONE	1870	54	0	2	11
SELLA NEVEA - LIVINAL LUNC	1837	214	0	2	11
PIANCAVALLO	1280	0	0	3	13
TARVISIO	800	0	0	0	18

**Snow cover conditions and avalanche danger:** Clear sky and thermal zero at 2300 m. Snow cover is mainly stable and well bonded everywhere, also due to repeated melting and refreezing cycles during the previous days. On the Julian Alps, only to maximum altitudes of the North exposures, there are limited deposits of wind drifted snow with possible triggering from steep slopes only with high additional load. In the morning it is possible to find extended icy sections that can cause ruinous falls. Expected danger level is 1 (low) throughout the mountain territory.

Forecast for Tuesday 02 April 2019, reliability: 80%

Mainly stable and well bonded snow cover.

T.average 2000: 2 °C

**Weather by OSMER - ARPA FVG:**  
Little cloudy skies. Some slight rainfalls in the evening.

**Snow cover conditions and avalanche danger:** Little cloudy skies for Tuesday. Snow cover is mainly stable and well bonded everywhere, also due to repeated melting and refreezing cycles during the previous days. On the Julian Alps, only to maximum altitudes of the North exposures, there are limited deposits of wind drifted snow with possible triggering from steep slopes only with high additional load. In the morning it will be possible to find extended icy sections that can cause ruinous falls. Expected danger level: 1 (low) throughout the mountain territory.

Forecast for Wednesday 03 April 2019, reliability: 70%

**Increase in danger due to expected new snowfalls.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2000 m  
T.average 1000: 6 °C  
T.average 2000: 0 °C

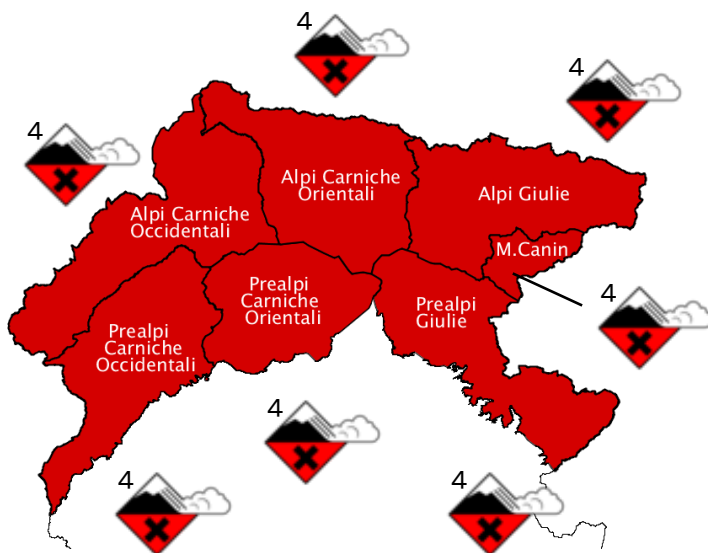

**Weather by OSMER - ARPA FVG:**

Covered skies with possible snowfalls above 1300-1500 m.

**Snow cover conditions and avalanche danger:** From the morning intense rainfalls are expected with snow altitudes that will vary between 1300 and 1500 m. Expected 20-40 cm of snow on the Western areas of the Region, 20-30 cm on the East with peaks of 40-50 cm on the Canin. The avalanche danger will be 2 (moderate) increasing from late afternoon to 3 (considerable) throughout the mountain territory. Moderate SW winds are expected, which can favor deposits in the bowls, couloir and near slope changes, particularly on the Northern exposures. From late afternoon, natural triggering of small size will be possible from the walls and the steeper slopes, and of medium size as well on the Eastern areas. On the deposit areas, on very steep slopes mainly on the Northern exposures the caused triggering may occur at a single person passage.

Forecast for Thursday 04 April 2019, reliability: 60%

**Danger increasing to 4 (high) throughout the mountain territory.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2100 m  
T.average 1000: 6 °C  
T.average 2000: 0 °C

**Weather by OSMER - ARPA FVG:**

Overcast skies with strong snowfalls above 1200 m.

**Snow cover conditions and avalanche danger:** Further 60-100 cm of new snow are expected on Thursday. The quantity could be quite considerable (100-150 cm). Expected danger level: 4 (high) everywhere. The large quantities of the expected new snow, will favor possible natural triggering of large avalanches to all exposures, even very large in some cases, even full depth slab avalanche on the grassy slopes of the Southern sides. On steep slopes, on the deposit areas above 1500 m and to all exposures, the caused triggering of large avalanches will be possible even with low additional load everywhere.
