

Situation of 29 April 2019 edition of the hours 14-next update 02-05-2019 hours 14, forecaster: AM

reliability: 80%

**Possible avalanches, both natural and human triggered, of large size as well.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1000 m  
T.average 1000: 2 °C  
T.average 2000: -2 °C

**Weather by OSMER - ARPA FVG:**

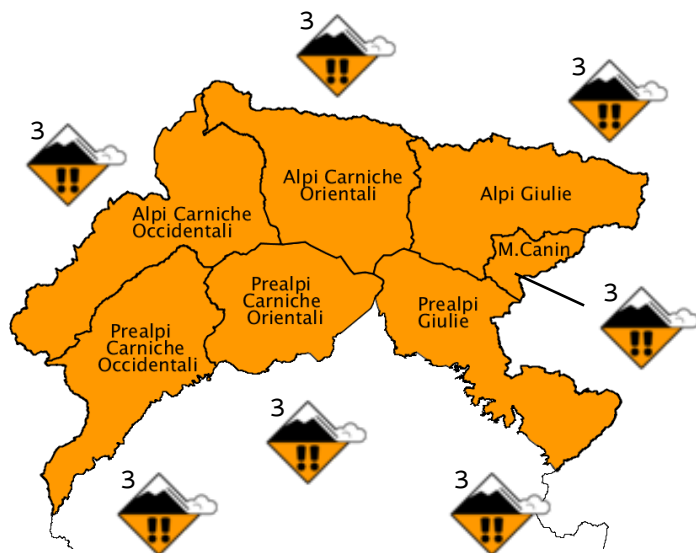

Cloudy skies. Snowfalls above 700-800 m, inland areas of Carnia and Tarvisiano. Above 1000 m on the Pre-Alps.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	80	36	-3	-2
VARMOST M.TE SIMONE	1870	143	87	-3	-2
SELLA NEVEA - LIVINAL LUNC	1837	258	47	-3	-2
PIANCAVALLO	1280	84	91	-1	-1
TARVISIO	800	16	13	0	4

**Snow cover conditions and avalanche danger:** The recent snowfalls have brought 50-80 cm of new snow above 1500 m over the whole mountain territory. The Northern winds have strongly remodeled the snowpack. At altitude, areas with obvious deposits alternate with heavily eroded areas. On steep slopes above 1500 m along the usual routes and in all the exposures, natural avalanches of medium and, in some cases, large ones are to be expected, even ground avalanches on the steepest grassy slopes. Locally, some isolated phenomena can affect the routes at higher altitude of the road system normally subject to the danger of avalanches. The human avalanches triggering, generally of medium size, is possible even at the passage of the single skier or hiker on the deposit areas located on steep slopes and along the gullies above the forest limit and in all aspects. Expected danger level: 3 (considerable) throughout the mountain territory.

Forecast for Tuesday 30 April 2019, reliability: 70%

**Possible avalanches, both natural and human triggered, of large size as well.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2200 m  
T.average 1000: 7 °C  
T.average 2000: 1 °C

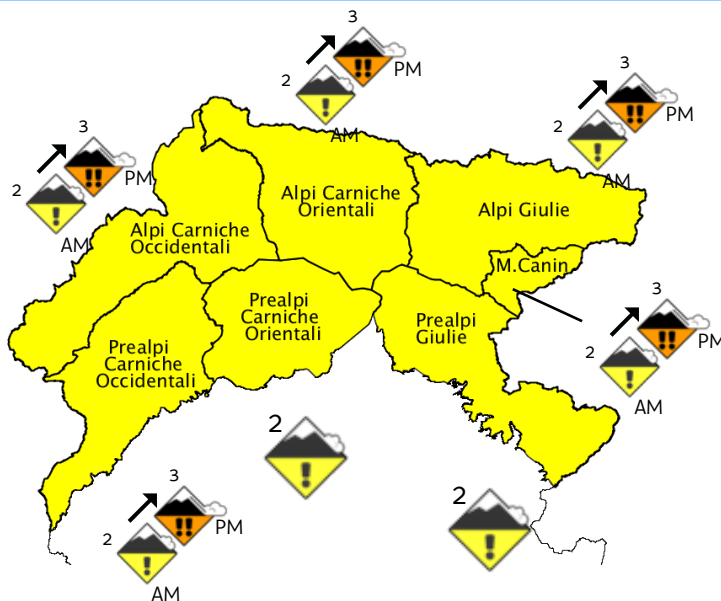

**Weather by OSMER - ARPA FVG:**

Mostly cloudy skies. Some local and weak rainfall will be possible during the day.

**Snow cover conditions and avalanche danger:** Cloudy skies with possibility of weak rainfalls. The snowpack is not well bonded yet. Natural medium and sometimes large size will be possible avalanches on steep slopes not discharged yet especially during hot hours. Wet snow avalanches are expected under 1800 m, ground avalanches as well on grassy slopes while there will be dry snow avalanches at altitude. The human avalanches triggering, generally of medium size, will be possible even at the passage of the single skier or hiker on the deposit areas located on steep slopes and along the gullies above 1800 m and in all aspects. Expected danger level: 3 (considerable) throughout the mountain territory.

Forecast for Wednesday 01 May 2019, reliability: 70%

Possible avalanches, both natural and human triggered, in particular during the hottest hours

Thermal Zero: 2400 m  
T.average 1000: 9 °C  
T.average 2000: 2 °C

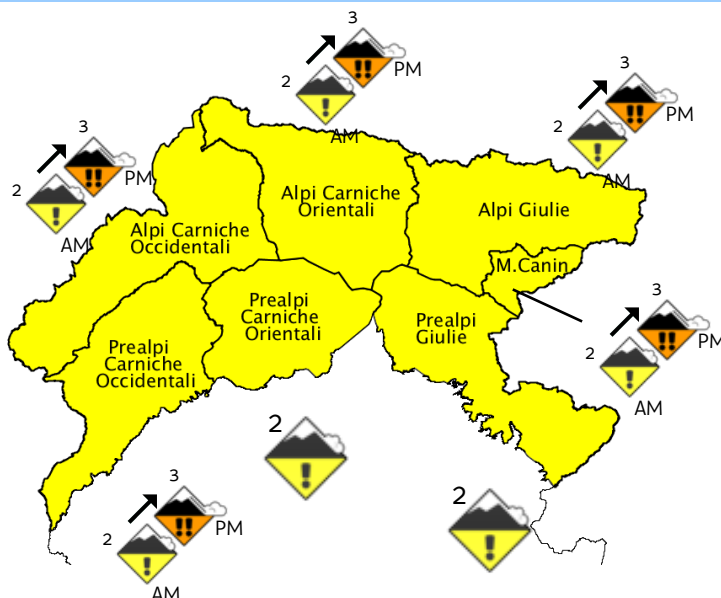

Weather by OSMER - ARPA FVG:

Cloudy skies with winds in breeze. The formation of some local shower will be possible.

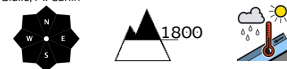

**Snow cover conditions and avalanche danger:** Little cloudy skies with slight increase in maximum temperatures. The snowpack is slowly bonding. Above 1900 m, in the morning on the deposit areas on the steep slopes, the human triggering of medium avalanches will be possible generally with high additional load. The low additional load on very steep slopes is not excluded locally. With the daytime increase in temperature, the human triggering will be possible even on steep slopes at the passage of the single skier or hiker (low additional load). Always during hot hours it will be possible to start again the natural avalanche activity, with medium size triggering in general, especially on the sunny slopes, ground avalanches as well on the grassy slopes. Expected danger level: 2 (moderate) in the Alps and on the Western Carnic Pre-Alps, increasing to 3 (considerable) from late morning; 2 (moderate) on the Julian and Eastern Carnic Pre-Alps

Forecast for Thursday 02 May 2019, reliability: 60%

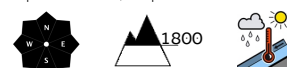

Possible avalanches, both natural and human triggered, in particular during the hottest hours

Weather by OSMER - ARPA FVG:

Little cloudy skies in the morning. Possible rainfalls in the afternoon.

**Snow cover conditions and avalanche danger:** Little cloudy skies, possible new rainfalls from the afternoon. Expected danger level on Alps and Western Carnic Pre-Alps: 2 (moderate) increasing to 3 (considerable) from late morning: in the morning, on the deposit areas above 1900-2000 m the human triggering of medium size avalanches will be possible generally with high additional load while with the daytime increase in temperature it will also be possible at the passage of the single skier or hiker (load additional load). Always during hot hours, generally medium size natural avalanches are possible, especially on the slopes exposed to the sun, ground avalanches as well on the grassy slopes. On the Julian and Eastern Carnic Pre-Alps, danger 2 (moderate). On the steep slopes small natural and human triggered avalanches are possible, particularly during hot hours.
