

# AVALANCHE BULLETIN n.1 the 08 November 2019

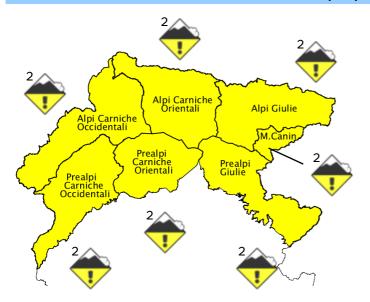

Situation of 08 November 2019 edition of the hours 14-next update 11-11-2019 hours 14, forecaster: DM

reliability: 80%

### Possible loose snow avalanches of medium size from steep slopes.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alp Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2000 m T.average 1000: 6 °C T.average 2000: 0 °C

### Weather by OSMER - ARPA FVG:

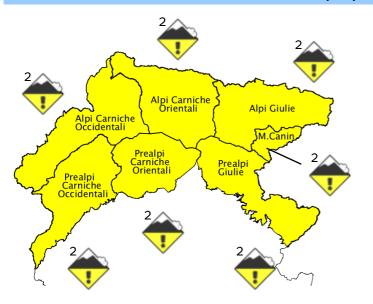

Heavy rainfalls, snowy above 1500 m, at lower altitudes in the area bordering with Cadore.

**Snow cover conditions and avalanche danger:** Our region is affected by a disturbance that is bringing snow on the Alps above 900 m and above 1300 m on the Prealps. The total quantities expected at 2000 m for the whole episode are around 70-90 cm on the Alps, lower amounts on the Prealps. The area most affected by snowfall will be the western one (Dolomiti Friulane, Forni di Sopra, Sauris and Sappadino). The snow deposited on the non-frozen ground does not have an optimal adherence, so that small and medium-sized avalanches are possible above 1800 m along the gullies and steeper slopes at all exposures, even ground avalanches from the grassy slopes. Human triggering is possible even with low additional loads in areas with more deposit and high inclination of the slope. Real danger level: 2 (moderate) everywhere.

## Forecast for Saturday 09 November 2019, reliability: 80%

### Possible loose snow avalanches of medium size from steep slopes.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

ا ا

Thermal Zero: 1800 m T.average 1000: 5 °C T.average 2000: -1 °C

### Weather by OSMER - ARPA FVG:

Possible residual rainfall at night and early morning; during the day improvement with variable sky

Snow cover conditions and avalanche danger: For Saturday the weather conditions will be in clear improvement, above 1800 m, given the amount of new snow not bonded yet, possible triggering medium-sized loose avalanches from the usual routes and along the gullies and steeper slopes will be possible to all exposures even ground avalanches from grassy slopes. Above this altitude the triggering may occur as well even with low additional load in the areas of greatest deposit and high inclination of the slope. On the Prealps the danger is confined to the summit areas. Expected danger level: 2 (moderate) throughout the mountain area.

# **AVALANCHE BULLETIN** n.1 the 08 November 2019

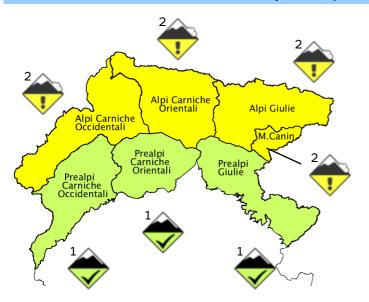

# Forecast for Sunday 10 November 2019, reliability: 80%

### Possible loose snow avalanches of medium size, particularly on the Alps.

Thermal Zero: 1700 m T.average 1000: 5 °C T.average 2000: -2 °C

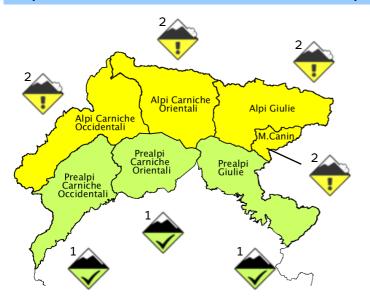

### Weather by OSMER - ARPA FVG:

Little cloudy weather or variable to the east in the morning, clear sky or little cloudy during the day.

Snow cover conditions and avalanche danger: On Sunday, triggering of medium-sized loose avalanches will be still possible above 1800 m from the usual routes and along the gullies and steeper slopes especially at the sun exposure. Still above this altitude, the human triggering can generally occur with high additional load in the areas of greatest deposit and high inclination of the slope. On the Prealps the danger will be less due to the smaller amount of snow present. Expected danger level: 2 (moderate) on the Carnic and Julian Alps, 1 (low) on the Carnic and Julian Prealps.

## Forecast for Monday 11 November 2019, reliability: 80%

### Still possible medium-sized loose natural avalanches on the Alps.

T.average 1000: 4 °C T.average 2000: -1 °C

Thermal Zero: 1800 m

Weather by OSMER - ARPA FVG: Clear sky or little cloudy.

Snow cover conditions and avalanche danger: On Monday, residual loose avalanches triggering of medium size will be still possible above 1900 m from usual routes and along gullies and the steeper slopes particularly at sun exposure. Still above this altitude, the human triggering can generally occur with high additional load in the areas of greater deposit and high inclination of the slope. On the Prealps the danger will be less due to the smaller amount of snow present. Expected danger level: 2 (moderate) on the Carnic and Julian Alps, 1 (low) on the Carnic and Julian Prealps.
