

Situation of 13 November 2019 edition of the hours 14-next update 15-11-2019 hours 14, forecaster: DM

reliability: 80%

Possible medium and large sized avalanches in all aspects above 1700 m.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1500 m
T.average 1000: 3 °C
T.average 2000: -1 °C

Weather by OSMER - ARPA FVG:

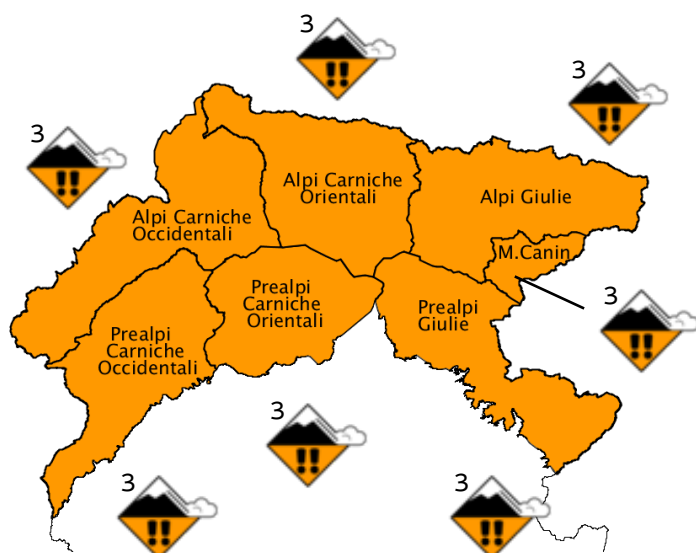

Abundant snowfalls in the morning, moderate since the afternoon, on Prealps above 1500 m, on Alps above 1000 m.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	76	27	-1,0	0,0
VARMOST M.TE SIMONE	1870	85	27	-1,0	1,0
SELLA NEVEA - LIVINAL LUNC	1837	147	42	-0,6	1,4
PIANCAVALLO	1280	0	0	2,3	4,6
TARVISIO	800	31	23	0,0	3,4

Snow cover conditions and avalanche danger: Our region is affected by a disturbance that is bringing abundant snowfall throughout the territory with quantities of new fallen snow of about 60-90 cm above 1800 m. The snow fell to 800-1000 m on the Alps and 1400-1500 on the Prealps. Both loose snow avalanches and medium and sometimes large slabs release are possible over 1700 m from the steepest slopes and along the gullies in all aspects. Always above this altitude on the steep slopes, the human triggering of soft slabs is possible even with low additional load everywhere. Current danger level: 3 (considerable) throughout the mountain territory.

Forecast for Thursday 14 November 2019, reliability: 80%

Medium and large size avalanches are still possible in all aspects above 1700 m.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1500 m
T.average 1000: 4 °C
T.average 2000: -2 °C

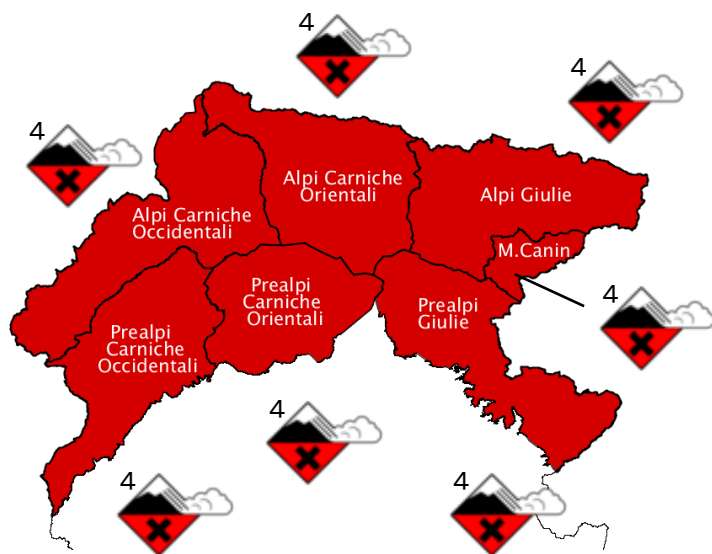

Weather by OSMER - ARPA FVG:

Little overcast or variable skies with more clear spells at altitude, more cloudy on Tarvisio area.

Snow cover conditions and avalanche danger: The pause regarding rainfall expected for Thursday will favor a slight snowpack firmness everywhere. Over 1700 m, however, both loose snow avalanches and medium and large slabs release are possible in all aspects, in particular at southern aspects and during the hottest hours of the day. Always above 1700 m, the human avalanches triggering can occur on the steep slopes even with low additional load, in particular in deposit areas with wind-drifted snow located under the ridges and passes. Expected danger level: 3 (considerable) throughout the mountain territory.

Forecast for Friday 15 November 2019, reliability: 70%

Possible avalanches that may affect road system above 1200 m.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2000 m
T.average 1000: 6 °C
T.average 2000: 0 °C

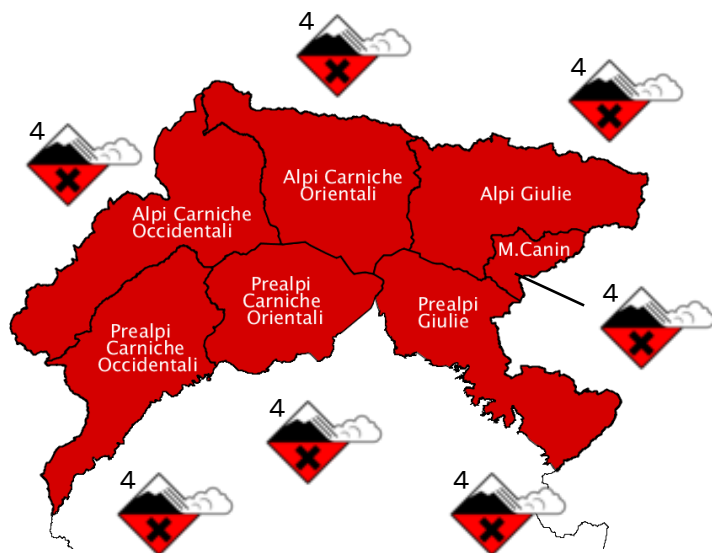

Weather by OSMER - ARPA FVG:

Initially, abundant snowfall up to 1300 m increasing up to about 1600-1800 m, over 2000 m on the Prealps.

Snow cover conditions and avalanche danger: The arrival of a new intense disturbance on Friday will bring new abundant snowfalls above approximately 1500 m throughout the mountain territory. Above 1800 m, quantities may be higher than 80-100 cm. Given the expected quantity and the snow already present on the ground, above 1700m, natural avalanches triggering of medium and large dimensions and in some cases even very large will be possible, which while are conveying into the steepest gullies can also involve the ordinary road system located above 1200 m throughout the whole Alpine area, a less likely condition on the Prealps. Beyond the edge of the forest, the human avalanche triggering may occur even with low additional load (single skier or hiker) on steep slopes in all aspects. Expected danger level: 4 (high) throughout the mountain territory.

Forecast for Saturday 16 November 2019, reliability: 70%

Possible avalanches can also involve the ordinary road system located above 1200 m

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1500 m
T.average 1000: 4 °C
T.average 2000: -2 °C

Weather by OSMER - ARPA FVG:

Overcast skies with possible snowfall above 1500 m at twilight.

Snow cover conditions and avalanche danger: On Saturday, more snowfall is expected, although lower. In all aspects above 1700 m, medium and large natural avalanches triggering will be possible over 1700 m in all aspects, in some cases even very large, which while conveying into the steepest gullies can also involve ordinary road system above 1200 m along the entire Alpine area, this is a less likely condition on the Prealps. The human avalanches triggering may occur beyond the edge of the forest even with low additional load (single skier or hiker) on steep slopes in all aspects. Expected danger level: 4 (high) throughout the mountain area.
