

Situation of 24 December 2019 edition of the hours 14-next update 27-12-2019 hours 14, forecaster: DM

reliability: 80%

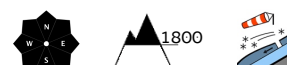

Considerable danger 3 on Alps due to possible human triggered avalanches with low additional load.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

km/h

T max T min

Thermal Zero: 1800 m

T.average 1000: 3 °C

T.average 2000: -2 °C

Weather by OSMER - ARPA FVG:

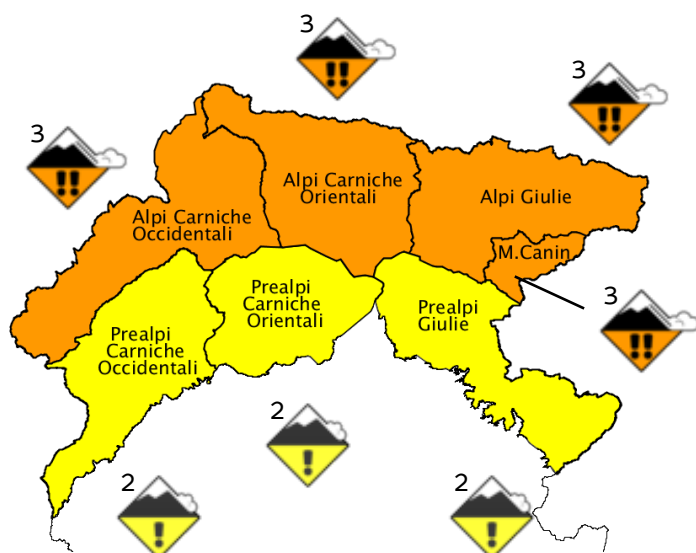

Clear or little cloudy skies. Strong wind will blow from North-South on the ridges.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	92	0	-2	1
VARMOST M.TE SIMONE	1870	118	0	-3	0
SELLA NEVEA - LIVINAL LUNC	1837	272	0	-1	0
PIANCAVALLO	1280	3	0	0	5
TARVISIO	800	3	0	-4	4

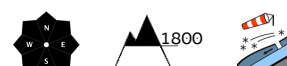

Snow cover conditions and avalanche danger: On the Alps at high altitude, the wind from the northern quadrants continues to form new wind-drifted deposits in all aspects, but in particular on the southern ones. Above 1800 m the avalanche danger is 3 (considerable) due to possible human triggered avalanches of medium and large slabs, even with low additional load, in all aspects and in particular of larger size where wind-drifted snow deposits are located. This situation is more widespread on the Mount Canin colossal. Always above 1800 m natural avalanches triggering are possible, both slabs and loose snow, of medium and large sizes, particularly at southern exposures. On the Prealps, the danger is 2 (moderate) and the possibility of causing human triggering is less and generally it requires a high overload. Here the triggering possibility is limited to the areas under the ridge where new deposits have been created.

Forecast for Wednesday 25 December 2019, reliability: 70%

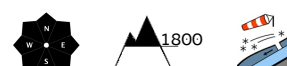

Possible human triggering on the Alps even with low additional load on deposit areas.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

T max T min

Thermal Zero: 1800 m

T.average 1000: 4 °C

T.average 2000: -1 °C

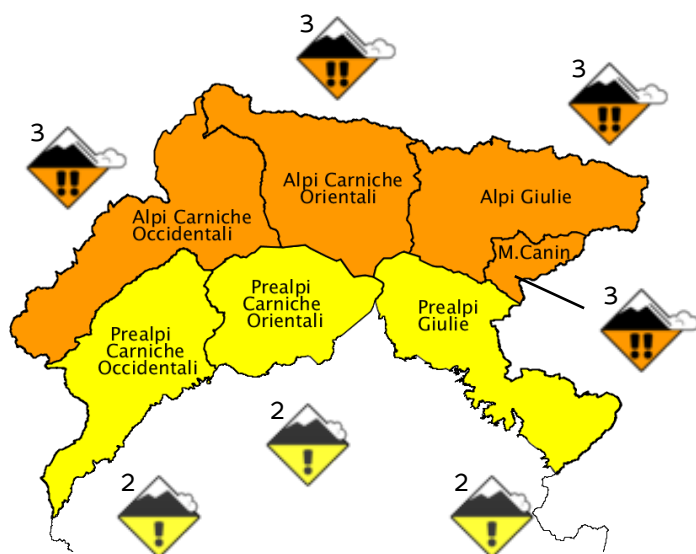

Weather by OSMER - ARPA FVG:

Little cloudy skies. At high altitude on the ridges, a moderate wind will blow from the North.

Snow cover conditions and avalanche danger: The snowpack will gradually bod everywhere, the wind will tend to locate the danger in the areas under the ridge and along the gullies. On the Alpine ridge the avalanche danger will continue to be 3 (considerable) due to the presence of dangerous wind-drifted snow deposits present at high altitude. Above 1800 m, human triggered slab avalanches will be possible, even with low additional load, of medium and large size along the gullies, steep slopes and under the ridges in all aspects, in particular where the wind has created the most significant deposits. Always above such altitude, small and medium-sized natural avalanches will still be possible along the usual routes, in particular to the southern exposures. On the Prealps the danger will be 2 (moderate) always due to the presence of wind-drifted snow deposits in the areas under the ridge, where the human triggering will generally be possible with high additional load.

Forecast for Thursday 26 December 2019, reliability: 70%

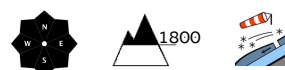

Possible human triggering on the Alps even with low additional load on deposit areas.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 1300 m
T.average 1000: 1 °C
T.average 2000: -4 °C

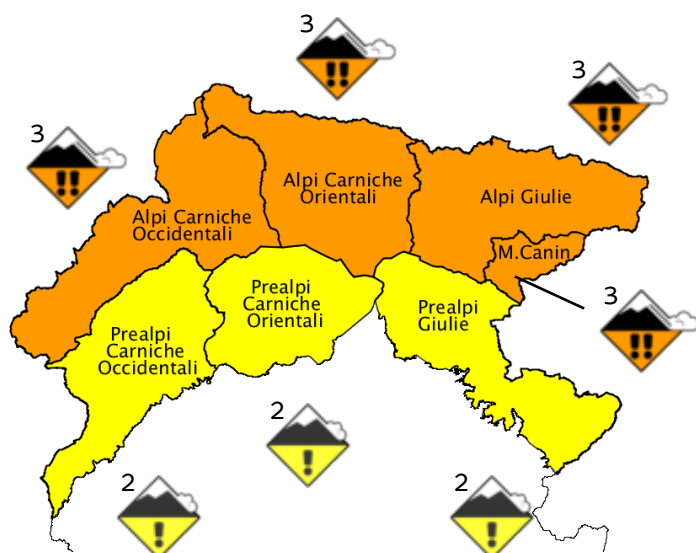

Weather by OSMER - ARPA FVG:

Clear sky in the morning with a moderate wind at altitude from the North, variable sky from the afternoon.

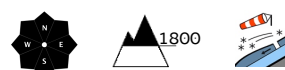

Snow cover conditions and avalanche danger: For Thursday, the wind from the northern quadrants will still dominate the meteorological aspect. On the Alpine ridge the avalanche danger will continue to be 3 (considerable) due to the presence of dangerous wind-drifted snow deposits present at high altitude. Above 1800 m, human triggered slab avalanches will be possible, even with low additional load, of medium and large size along the gullies, steep slopes and under the ridges in all aspects, in particular where the wind has created the most significant deposits. Always above such altitude, small and medium-sized natural avalanches will still be possible along the usual routes, in particular to the southern exposures. On the Prealps the danger will be 2 (moderate) always due to the presence of wind-drifted snow deposits in the areas under the ridge, where the human triggering will generally be possible with high additional load.

Forecast for Friday 27 December 2019, reliability: 70%

Possible human triggering on the Alps even with low additional load on deposit areas.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 1200 m
T.average 1000: 0 °C
T.average 2000: -3 °C

Weather by OSMER - ARPA FVG:

Generally variable or cloudy skies.

Snow cover conditions and avalanche danger: Decreasing wind on Friday. On the Alpine ridge the avalanche danger will continue to be 3 (considerable) due to the presence of dangerous wind-drifted snow deposits present at high altitude. Above 1800 m, human triggered slab avalanches will be possible, even with low additional load, of medium and large size along the gullies, steep slopes and under the ridges in all aspects, in particular where the wind has created the most significant deposits. Always above such altitude, small and medium-sized natural avalanches will still be possible along the usual routes, in particular to the southern exposures. On the Prealps the danger will be 2 (moderate) always due to the presence of wind-drifted snow deposits in the areas under the ridge, where the human triggering will generally be possible with high additional load.
