

Situation of 10 January 2020 edition of the hours 14-next update 13-01-2020 hours 14, forecaster: MM

reliability: 90%

Possible human triggering with high additional load to the North above 2000 m. Watch out ice!

Thermal Zero: 2400 m T.average 1000: 1 °C T.average 2000: 0 °C

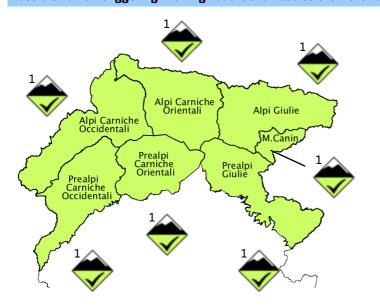

Weather by OSMER - ARPA FVG: Little cloudy skies.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	83	0	-2,9	5,4
VARMOST M.TE SIMONE	1870	108	0	-3,6	7,9
SELLA NEVEA - LIVINAL LUNC	1837	250	0	-2	4
PIANCAVALLO	1280	0	0	-3,9	8
TARVISIO	800	2	0	0	9

Snow cover conditions and avalanche danger: The alternation between cold days and days with mild temperatures at high altitude as well is further favoring the snowpack bonding which, therefore, is well bonded almost everywhere. At the highest altitudes and in particular on the northern slopes, there are still wind-drifted snow deposits only moderately bonded due to the presence of fragile layers inside them. The avalanche danger is 1 (low) throughout the mountain territory: at the highest altitudes of the very steep slopes, in particular in the northern aspects and near ridges and passes it is possible to have human triggered avalanches, generally of medium size, mainly with high additional load. Everywhere, pay attention to the presence of large frozen areas smoothed by the wind.

Forecast for Saturday 11 January 2020, reliability: 90%

Possible human triggering with high additional load to the North above 2000 m. Watch out ice!

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

0 NE 20 km/h

Thermal Zero: 1500 m T.average 1000: 2 °C T.average 2000: -3 °C

Weather by OSMER - ARPA FVG: Clear skies

Snow cover conditions and avalanche danger: Clear skies and decrease in freezing point down to 1500 m. The snowpack is well bonded almost everywhere even if, at the maximum altitudes and on the northern slopes in particular, there are still wind-drifted snow deposits only moderately bonded due to the presence of fragile layers inside them. Throughout the mountain territory the avalanche danger is 1 (low): at the highest altitudes of the very steep slopes, in particular in the northern aspects and near ridges and passes it is possible to have human triggered avalanches, generally of medium size, mainly with high additional load. Everywhere, pay attention to the presence of large frozen areas smoothed by the wind.

AVALANCHE BULLETIN n.27 the 10 January 2020

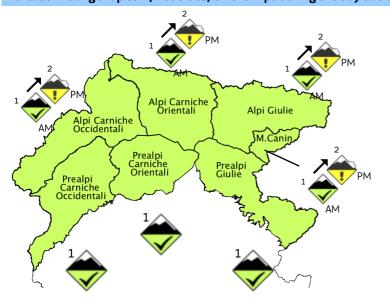

Forecast for Sunday 12 January 2020, reliability: 80%

Increase in danger up to 2(moderate) on the Alps during the day due to thermal increase.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giu

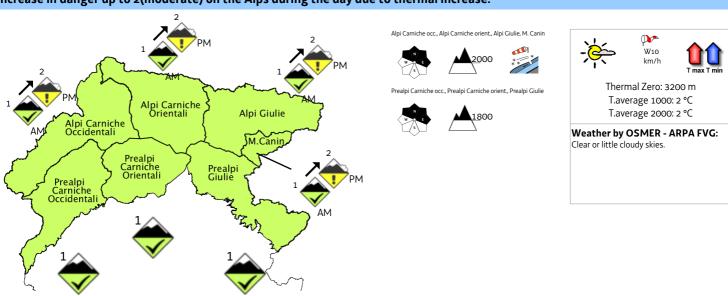

Thermal Zero: 2800 m T.average 1000: 0 °C T.average 2000: 2 °C

Weather by OSMER - ARPA FVG: Clear skies.

Snow cover conditions and avalanche danger: Clear skies with increase in freezing point up to 2800 m. On the Alps, avalanches danger will be 1(low) increasing to 2 (moderate) during the day: above 2000 m in all aspects of the steep slopes with wind-drifted deposits the human triggered avalanches will be possible mainly with high additional load, especially during the hottest hours of the day. Generally, triggering can be of medium size. Natural avalanche activity will be limited to some discharges, possibly also formed by icy blocks, from the steepest sunny slopes, in particular in areas with outcropping rock. A latent danger of gliding avalanches on the steepest grassy slopes more sunny still remains. On the Pre-Alps the danger will be 1 (low): some small human triggering on the very steep slopes of the summit areas will be possible. Everywhere, pay attention to the presence of large frozen areas.

Forecast for Monday 13 January 2020, reliability: 80%

Increase in danger up to 2(moderate) on the Alps during the day due to thermal increase.

Snow cover conditions and avalanche danger: Nice weather with further increase in freezing point up to 3200 m. On the Alps, avalanches danger will be 1(low) increasing to 2 (moderate) during the day: above 2000 m in all aspects of the steep slopes with wind-drifted deposits the human triggered avalanches will be possible mainly with high additional load, especially during the hottest hours of the day. Generally, triggering can be of medium size. Natural avalanche activity will be limited to some discharges, possibly also formed by icy blocks, from the steepest sunny slopes, in particular in areas with outcropping rock. A latent danger of gliding avalanches on the steepest grassy slopes more sunny still remains. On the Pre-Alps the danger will be 1 (low): some small human triggering on the very steep slopes of the summit areas will be possible. Everywhere, pay attention to the presence of large frozen areas.
