

Situation of 12 February 2020 edition of the hours 14-next update 14-02-2020 hours 14, forecaster: AM

reliability: 90%

Isolated wind-drifted snow deposits presence, human triggering especially with high additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1200 m
T.average 1000: 1 °C
T.average 2000: -6 °C

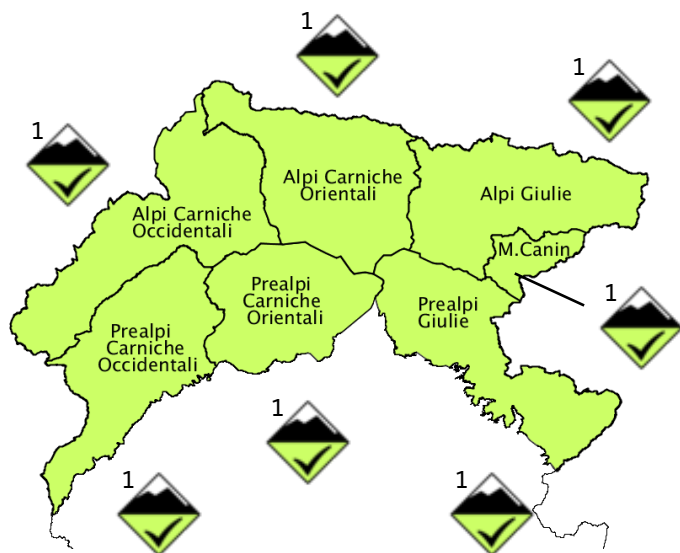

Weather by OSMER - ARPA FVG:
Clear or little cloudy skies

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	80	0	-4	4
VARMOST M.TE SIMONE	1870	070	0	-6	4
SELLA NEVEA - LIVINAL LUNC	1837	271	4	-4	2
PIANCAVALLO	1280	0	0	-2	5
TARVISIO	800	0	0	-3	9

Snow cover conditions and avalanche danger: The snowpack is generally stable and well bonded. In bowls and gullies at altitude small isolated wind-drifted snow deposits are present. The avalanche danger is 1 (low) over the entire territory. Above 1900 m on very steep slopes of the northern aspects, in isolated areas with the presence of wind-drifted snow deposits, there is still the possibility to cause small human triggered surface slab avalanches, mainly with high additional load. Pay attention to the presence of icy areas.

Forecast for Thursday 13 February 2020, reliability: 70%

Low danger everywhere, isolated wind-drifted snow deposits, possible human triggering with high load

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1200 m
T.average 1000: 1 °C
T.average 2000: -5 °C

Weather by OSMER - ARPA FVG:
Clear or little cloudy skies. Possible some light snowfall in the evening above 800 m approx.

Snow cover conditions and avalanche danger: Clear or little cloudy skies during the day. Increase in cloudiness starting from the evening with possible some very light snowfall during the night above 800 m approx. The snowpack will be generally stable and well bonded. The avalanche danger will be 1 (low) over the entire territory. In bowls and gullies at altitude small isolated wind-drifted snow deposits are present. In such areas, on very steep slopes of the northern aspects above 1900 m, there will still be the possibility to cause small human triggered surface slab avalanches, mainly with high additional load. Pay attention to the presence of icy areas.

Forecast for Friday 14 February 2020, reliability: 70%

Presence of small isolated wind-drifted snow deposits that may be human triggered with high load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

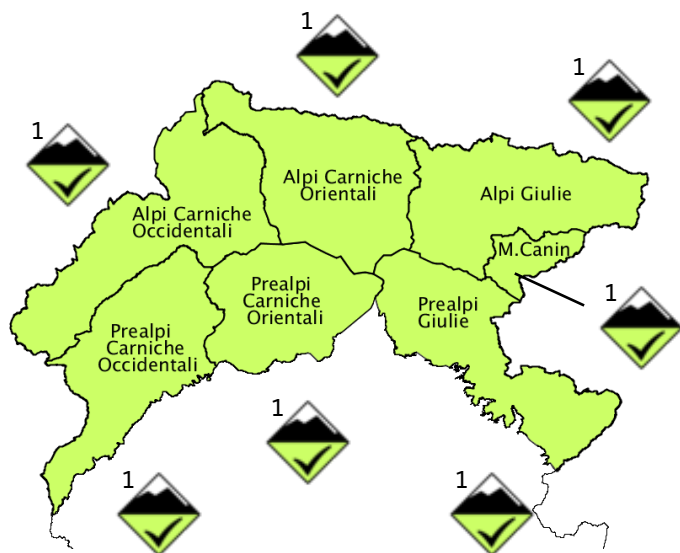

Thermal Zero: 1500 m
T.average 1000: 3 °C
T.average 2000: -3 °C

Weather by OSMER - ARPA FVG:
Clear or little cloudy skies.

Snow cover conditions and avalanche danger: Very light snowfall will affect the mountain area on Thursday night with insignificant amounts for the avalanche danger. The wind expected to turn rapidly from SW to N will favour the redistribution of the new snow with the possibility of small new wind-drifted snow deposits in the bowls and gullies. The avalanche danger will still be 1 (low) over the entire territory. In localized area with wind-drifted snow deposits, on very steep slopes located above 1900 m and especially in the northern aspects, there will be the possibility to cause small human triggered surface slab avalanches, mainly with high additional load. Pay attention to the presence of icy areas.

Forecast for Saturday 15 February 2020, reliability: 70%

Isolated wind-drifted snow deposits presence, human triggering especially with high additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2500 m
T.average 1000: 2 °C
T.average 2000: 0 °C

Weather by OSMER - ARPA FVG:
Clear or little cloudy sky. Increase in temperature at altitude. Thermal inversion during the evening in the valleys.

Snow cover conditions and avalanche danger: Clear or little cloudy skies, freezing point at 2500 m. The snowpack will be generally stable and well bonded. In bowls and gullies at altitude small isolated wind-drifted snow deposits will still be present. The avalanche danger will be 1 (low) over the entire territory. In localized area with wind-drifted snow deposits, on very steep slopes located above 1900 m and especially in the northern aspects, there will be the possibility to cause small human triggered surface slab avalanches, mainly with high additional load. Also, during hottest hours isolated human triggering will be possible from the walls and from the steepest sunny slopes. Pay attention to the presence of icy areas.
