

Situation of 14 February 2020 edition of the hours 14-next update 17-02-2020 hours 14, forecaster: AM

reliability: 90%

Possible isolated wind-drifted snow deposits that may be human triggered with high additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1500 m
T.average 1000: 4 °C
T.average 2000: -3 °C

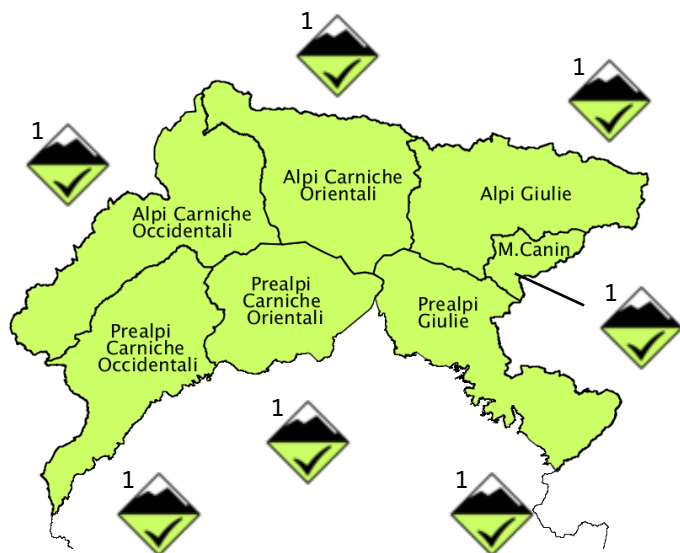

Weather by OSMER - ARPA FVG:
Clear or little cloudy skies. Moderate winds form NW at altitude.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	80	2	-5	1
VARMOST M.TE SIMONE	1870	73	3	-6	1
SELLA NEVEA - LIVINAL LUNC	1837	273	5	-4	-1
PIANCAVALLO	1280	1	1	-3	3
TARVISIO	800	0	0	-2	10

Snow cover conditions and avalanche danger: The rapid disturbance in the mountain area brought insignificant amounts of fresh snow for the avalanche danger (2-5 cm). The new snow was deposited on a stable and well bonded snowpack. The avalanche danger is 1 (low) over the entire territory. The wind facilitated the redistribution of the new snow with the formation of deposits in the bowls and gullies. In localized areas with wind-drifted snow deposits, on very steep slopes located above 1900 m and especially in the northern aspects, there is the possibility to cause small superficial triggering of slab avalanches, mainly with high additional load. Possible isolated triggering from the walls especially in Canin area. Pay attention to the presence of icy areas.

Forecast for Saturday 15 February 2020, reliability: 80%

Possible isolated wind-drifted snow deposits that may be human triggered with high additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2500 m
T.average 1000: 2 °C
T.average 2000: -1 °C

Weather by OSMER - ARPA FVG:
Clear skies with some glazing.

Snow cover conditions and avalanche danger: On Saturday the sky will be clear or little cloudy with freezing point at 2500 m. The avalanche danger will continue to be 1 (low) throughout the mountain area. The snowpack will be mostly stable and well bonded. Above 1900 m on the very steep slopes in the northern aspects, in isolated areas with wind-drifted snow deposits, it will be possible to cause small superficial slab avalanches triggering, especially with high additional load. During the hottest hours, triggering will also be possible from the steepest walls and sunny slopes. Pay attention to icy areas.

Forecast for Sunday 16 February 2020, reliability: 70%

During hot hours, small natural avalanches are possible on the sunny steep slopes.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 3800 m
T.average 1000: 2 °C
T.average 2000: 4 °C

Weather by OSMER - ARPA FVG:
Clear skies with some glazing.

Snow cover conditions and avalanche danger: Clear or little cloudy skies in the morning, variable to overcast during the day on the Prealps. Increase in temperatures, freezing point at 3800 m. The avalanche danger will continue to be 1 (low) throughout the mountain area. During the hottest hours, small natural avalanches will be possible from the steepest walls and sunny slopes. In localized areas with wind-drifted snow deposits, especially on very steep slopes located above 1900-2000 m, in northern areas it will be possible to cause small superficial triggering of slab avalanches, especially with high additional load.

Forecast for Monday 17 February 2020, reliability: 60%

During hot hours small and medium natural avalanches are possible on the steep slopes.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 3200 m
T.average 1000: 2 °C
T.average 2000: 3 °C

Weather by OSMER - ARPA FVG:
Overcast sky with likely scattered rainfall in the afternoon.

Snow cover conditions and avalanche danger: Overcast skies, likely scattered rainfall from the afternoon and freezing point at 3200 m. The avalanche danger will be 1 (low) with possible increase to 2 (moderate) on the Alps in relation to the expected amount of rain. In the Alps from the afternoon small and locally medium natural avalanches will be possible from the steepest walls and slopes in all aspects. Above 1900 m on very steep slopes in the northern aspects in localized wind-drifted snow deposits areas there will remain the possibility of small superficial triggering of slab avalanches mainly with high additional load. Low additional load during hottest hours is not excluded. On the Prealps the danger will be 1 (weak). At the highest altitudes of the northern aspects during the hottest hours, both small natural and human triggered avalanches will be possible.
