

Situation of 02 March 2020 edition of the hours 14-next update 04-03-2020 hours 14, forecaster: MM

reliability: 80%

Possible natural and human triggered avalanches on Julian and Canin with low additional load.

Alpi Giulie, M. Canin

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Prealpi Giulie

Thermal Zero: 1700 m  
T.average 1000: 3 °C  
T.average 2000: -2 °C

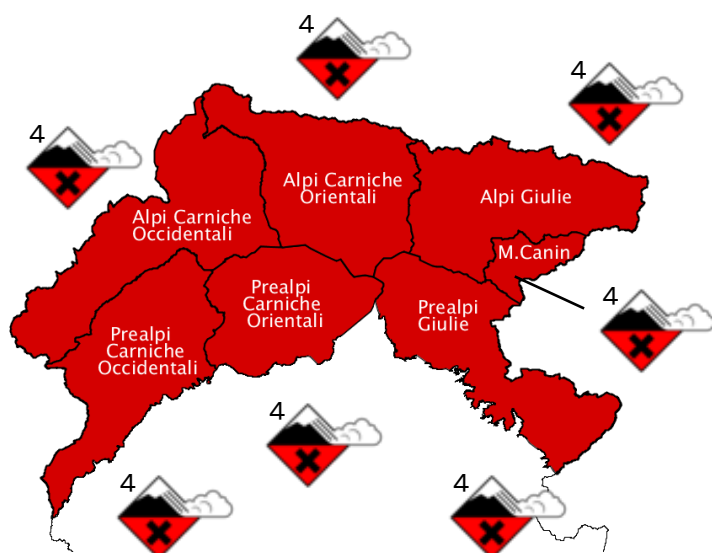

**Weather by OSMER - ARPA FVG:**  
Variable skies. Heavy snowfall from the afternoon-evening above around 1200 m.

| Station                    | quota (m) | snow depth (cm) | fresh snow (cm) | Tmin (°C) | Tmax (°C) |
|----------------------------|-----------|-----------------|-----------------|-----------|-----------|
| RIFUGIO TAMAI - ZONCOLAN   | 1750      | 105             | 22              | -4        | 0         |

**Snow cover conditions and avalanche danger:** Yesterday, a disrupted front affected our region. The heavier snowfalls were on the Julian Alps and the Canin area (30-50 cm), on the other areas the quantities were smaller (20 cm). At altitude, strong winds created new wind-drifted snow deposits mainly on the Northern slopes. Since the evening, new heavy snowfalls are expected. The avalanche danger on the Julian Alps and the Canin area is 3 (considerable): beyond the forest limit, on all the sides of the steep slopes, both natural and human triggered avalanches are possible even with low additional load, generally of medium and even large in size. In the Carnic Alps and Pre-Alps the avalanche danger is 2 (moderate): beyond the forest limit, on all the sides of the steepest slopes, usually both natural and human triggered avalanches of small and medium in size are possible even with low additional load.

Forecast for Tuesday 03 March 2020, reliability: 80%

Danger increasing to 4 (high) due to new heavy snowfalls above 1200 m altitude.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

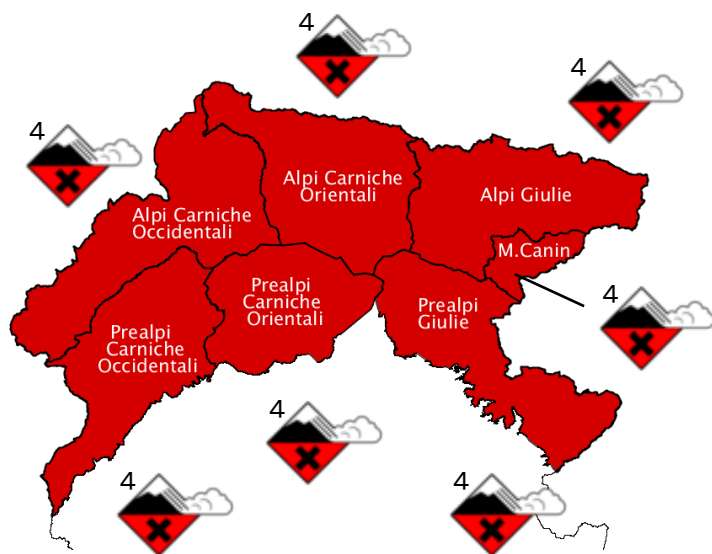

Thermal Zero: 1400 m  
T.average 1000: 4 °C  
T.average 2000: -2 °C

**Weather by OSMER - ARPA FVG:**  
Heavy snowfalls at night, abundant in the morning. Strong wind from South at altitude.

**Snow cover conditions and avalanche danger:** Heavy snowfalls expected at night, abundant during the morning on the whole mountain territory generally above 1200 m on the Alps and at higher altitudes on the Prealps. Expected strong winds from the South at altitude that will create further wind-drifted snow deposits. The avalanches danger level will be 4 (high) everywhere: beyond the forest limit, on all the slopes, both natural and human triggered avalanches will be possible already with a low additional load on many steep slopes. Triggering will be generally of large sizes even if may be even very large in some areas and in isolated cases affect, usually above 1200 m, the road system normally subject to avalanches danger.

Forecast for Wednesday 04 March 2020, reliability: 70%

Both natural and human triggered avalanches are possible even of large size.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

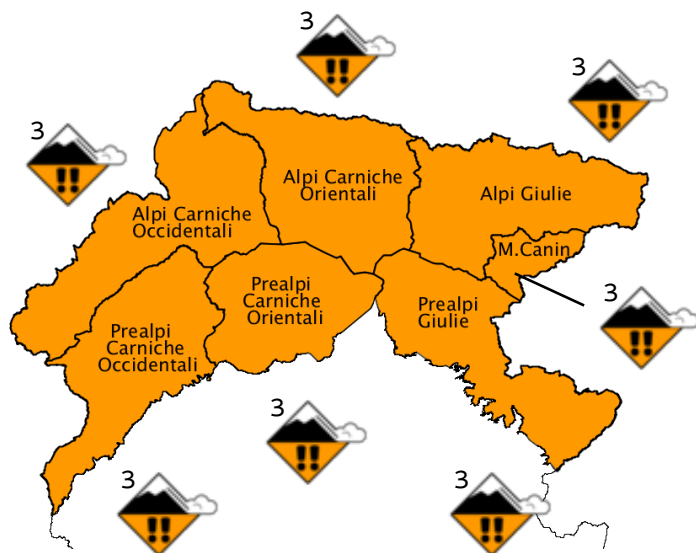

Thermal Zero: 1400 m  
T.average 1000: 2 °C  
T.average 2000: -5 °C

Weather by OSMER - ARPA FVG:  
Variable skies.

**Snow cover conditions and avalanche danger:** An improvement from cloudy to variable sky is expected. The heavy snowfalls had during the previous days, accompanied by strong winds at high altitude, will not yet favor the snowpack bonding and therefore the avalanche danger level will still be 4 (strong) everywhere: on all the slopes, both natural and human triggered avalanches will be possible already with a low additional load on many steep slopes not yet discharged. Triggering will be generally of large sizes even if may be even very large in some areas and in isolated cases affect, usually above 1200 m, the road system normally subject to avalanches danger.

Forecast for Thursday 05 March 2020, reliability: 70%

Also large sized natural and human triggered avalanches are possible.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1200 m  
T.average 1000: 1 °C  
T.average 2000: -5 °C

Weather by OSMER - ARPA FVG:  
Variable skies.

**Snow cover conditions and avalanche danger:** Little cloudy skies. Compared to last days, the snowpack will slowly bond. The avalanches danger will be 3 (considerable) everywhere: beyond the forest limit, particularly on the southern sides of the steep slopes, natural avalanches will be possible, generally of medium and even large sizes. Always beyond the forest limit, the human triggering will be possible even with low additional load, in all the aspects.
