

Situation of 06 March 2020 edition of the hours 14-next update 09-03-2020 hours 14, forecaster: MM

reliability: 80%

Both natural and human triggered avalanches are possible even with low additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1500 m
T.average 1000: 3 °C
T.average 2000: -2 °C

Weather by OSMER - ARPA FVG:

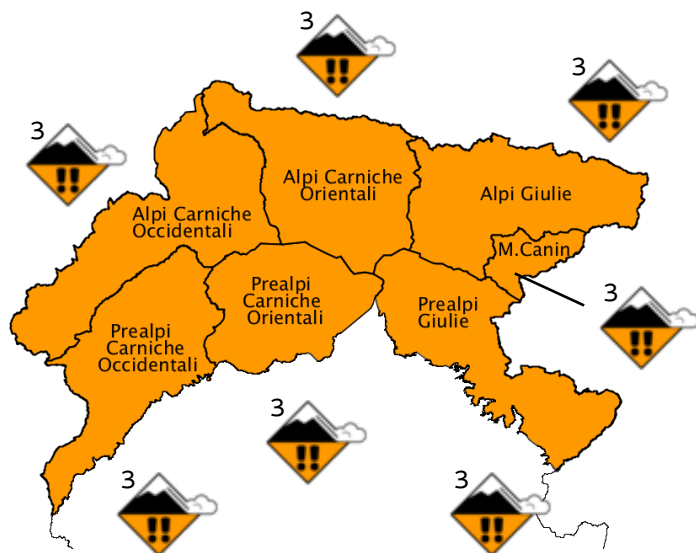

Overcast or cloudy skies, with clear spells to the West and still light snowfall to the East.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	159	11	-5	2
VARMOST M.TE SIMONE	1870	180	10	-6	4,5
SELLA NEVEA - LIVINAL LUNC	1837	403	25	-5,5	0
PIANCAVALLO	1280	40	20	-2,5	1,5
TARVISIO	800	12	10	0	4,5

Snow cover conditions and avalanche danger: A new snowfall affected the mountain territory at night up to low altitude. To the East, where residual snowfall also occurred in the morning, the quantities were greater (20/35 cm) while to the West they were smaller (10/25 cm). The snowfall happened together with Southern winds that created new wind-drifted snow deposits, especially on the Northern slopes. The avalanches danger is 3 (considerable) everywhere: beyond the forest limit, in all aspects, but especially on the Northern slopes, on steep slopes, human triggered avalanches are possible, usually of medium size, even with low additional load. From very steep slopes, in all aspects, small/medium natural avalanches are possible.

Forecast for Saturday 07 March 2020, reliability: 80%

Both natural and human triggered avalanches are possible even with low additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1500 m
T.average 1000: 3 °C
T.average 2000: -4 °C

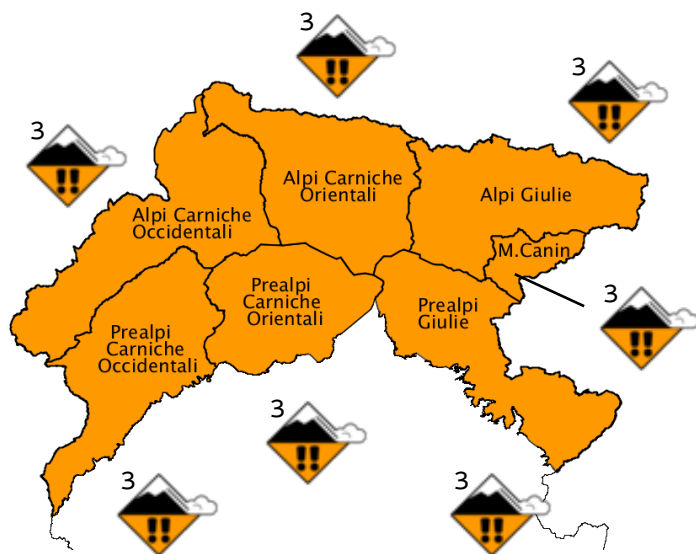

Weather by OSMER - ARPA FVG:

Overcast in the morning, clear spells from the afternoon.

Snow cover conditions and avalanche danger: Clear skies with clear spells from the afternoon. A moderate northern wind is expected at high altitude, which will favor the formation of new wind-drifted snow deposits. The avalanche danger will be 3 (considerable) all over the mountain territory: beyond the forest limit, on the steep slopes, human triggered avalanches will be possible even with low additional load. Such avalanches triggering will generally be of medium size and will be possible in all aspects, but in particular on the Northern slopes where wind-drifted snow deposits are more present. The most dangerous points will be the areas below the ridges, passes and steep gullies. On very steep slopes not yet discharged, particularly from the southern slopes, even small/medium natural avalanches will be possible.

Forecast for Sunday 08 March 2020, reliability: 70%

Human triggered avalanches are possible even with low additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1200 m
T.average 1000: 1 °C
T.average 2000: -6 °C

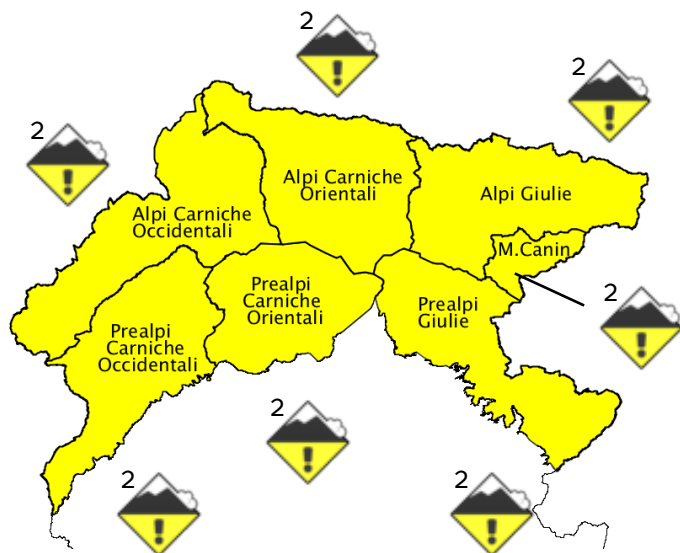

Weather by OSMER - ARPA FVG:

Clear skies in the morning; increase in cloudiness from afternoon-evening.

Snow cover conditions and avalanche danger: Clear or little cloudy skies with freezing point at 1200 m. Moderate north wind still expected at high altitude, which will favor the formation of new wind-drifted snow deposits. The avalanche danger will be 3 (considerable) all over the mountain territory: beyond the forest limit, on the steep slopes, human triggered avalanches will be possible even with low additional load. Such avalanches triggering will generally be of medium size and will be possible in all aspects, but in particular on the Northern slopes where wind-drifted snow deposits are more present. The most dangerous points will be the areas below the ridges, passes and steep gullies. From the walls and the very steep slopes, particularly from the southern slopes, even small/medium natural avalanches will be possible.

Forecast for Monday 09 March 2020, reliability: 70%

Human triggered avalanches are possible, generally with high additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1200 m
T.average 1000: 1 °C
T.average 2000: -3 °C

Weather by OSMER - ARPA FVG:

Cloudy to overcast skies. Slight snowfalls are possible.

Snow cover conditions and avalanche danger: Cloudy skies with freezing point at 1200 m. Slight snowfalls are possible. The snowpack will be more bonded and therefore the avalanche danger will be 2 (moderate) all over the mountain area: above 1800-1900 m, on steep slopes, human triggered avalanches will be possible, especially with high additional load. On the extreme slopes of the Alps, at the highest altitudes, local triggering is not excluded even at the passage of the single skier/hiker. Such avalanches triggering will generally be small/medium in size and may occur in all aspects, but mainly on the Northern slopes. Natural avalanche activity will be limited to small triggering from the steepest slopes.
