

Situation of 11 March 2020 edition of the hours 14-next update 13-03-2020 hours 14, forecaster: AM

reliability: 90%

# Both natural and human triggered avalanches are possible during hottest hours, even with low overload

Thermal Zero: 3000 m T.average 1000: 6 °C T.average 2000: 5 °C

# Weather by OSMER - ARPA FVG:

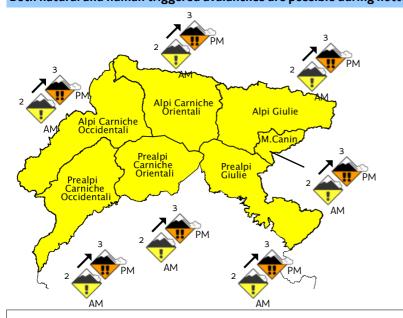

Clear skies. It will be warmer at altitude, freezing point at 3000 m.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	136	0	-3	8
VARMOST M.TE SIMONE	1870	160	0	-4	8
SELLA NEVEA - LIVINAL LUNC	1837	377	0	-3	7
PIANCAVALLO	1280	19	0	-1	5
TARVISIO	800	6	0	2	10

Snow cover conditions and avalanche danger: Good weather with freezing point at 3000 m. High temperatures will favor the natural avalanches activity during hottest hours. Avalanches danger is 2 (moderate) increasing to 3 (considerable) in the afternoon all over the mountain territory. During hot hours natural triggering of loose wet or moist snow avalanches, small or medium in size, will be possible from the walls and along the gullies, in all aspects but particularly on the southern sides. On the grassy slopes of the very steep southern slopes, ground triggering may also occur. On steep slopes above 1800 m, small and medium human triggered avalanches may occur mainly with high additional load in the early hours of the day, even with low additional load during hottest hours.

Forecast for Thursday 12 March 2020, reliability: 80%

Weather by OSMER - ARPA FVG: Overcast slies.

**Snow cover conditions and avalanche danger:** Overcast skies. Avalanches danger will be 2 (moderate). In areas with wind-drifted snow deposits, located on very steep slopes above 1800-1900 m especially in northern aspects, small and locally medium-sized human triggered avalanches will still be possible with high additional load. During hottest hours, natural small loose snow avalanches will still be possible from the steepest slopes, particularly on the southern slopes.

Forecast for Saturday 14 March 2020, reliability: 60%

Weather by OSMER - ARPA FVG:

Overcast skies with possible local and slight rains.

Snow cover conditions and avalanche danger: Cloudy skies, with decrease in temperatures and freezing point at 1400 m. This condition may favor a certain snowpack bonding. On the Carnic, Julian Alps and the Canin the avalanche danger will be 2 (moderate). In areas with wind-drifted snow deposits, located on the very steep slopes above 1800-1900 m, especially in the northern aspects, small and locally medium-sized human triggered avalanches will still be possible with high additional load. On the Prealps, danger will be 1 (low) to the North on steep slopes, the human triggered avalanches will be possible at the highest altitudes especially with high additional load.
