

Situation of 25 March 2020 edition of the hours 14-next update 27-03-2020 hours 14, forecaster: GA

reliability: 90%

Possibility of small human triggered avalanches to the North, especially with high additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 700 m
T.average 1000: -2 °C
T.average 2000: -11 °C

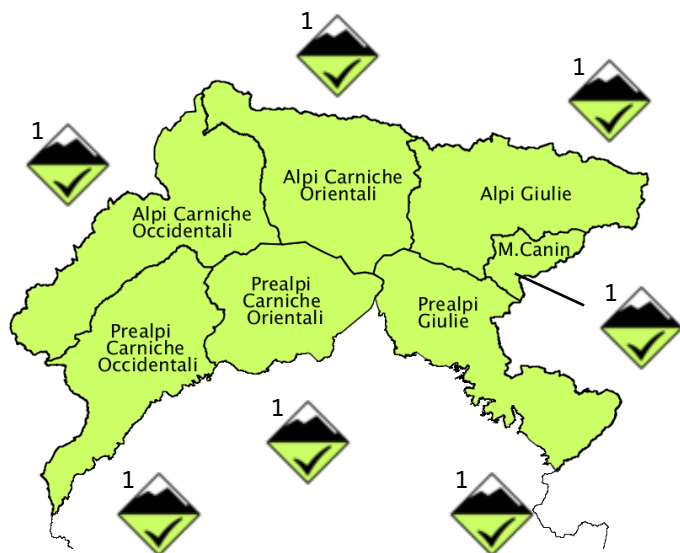

Weather by OSMER - ARPA FVG:
Generally cloudy skies with possible light local rainfall, snowy above around 400 m.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	102	0	-9	-4
VARMOST M.TE SIMONE	1870	134	0	-10	1
SELLA NEVEA - LIVINAL LUNC	1837	350	0	-7	-7
PIANCAVALLO	1280	0	0	-5	1
TARVISIO	800	0	0	-1	4

Snow cover conditions and avalanche danger: Since the morning very light snowfall has affected the peaks of the Tarvisio area. The snowpack is generally stable and well bonded everywhere. Above 2000 m on the northern slopes there are still small, isolated wind-drifted snow deposits and low temperatures contribute to the formation of weak layers within the snowpack. The avalanche danger is 1 (low) all over the mountain area. natural avalanche activity is almost completely absent or limited to isolated discharges from the walls and along the downwind gullies, particularly in the eastern parts of the region. Above 2000 m on the very steep slopes of the northern slopes, human triggering of small avalanches is possible, especially with high additional load.

Forecast for Thursday 26 March 2020, reliability: 80%

Possible isolated discharges and small human triggering to the North with high additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 900 m
T.average 1000: -1 °C
T.average 2000: -6 °C

Weather by OSMER - ARPA FVG:
Generally cloudy skies with possible light local rainfall, snowy above around 400 m.

Snow cover conditions and avalanche danger: Cloudy to overcast skies with the possibility of some light rainfall, snowy above around 400 m. Strong winds from East at altitude. In the areas most affected by rainfall, in bowls and gullies, new small wind-drifted snow deposits may form locally. However, the avalanches danger will continue to be 1 (low) all over the mountain area. Small discharges will be possible from the walls and along the downwind gullies. On very steep slopes in the northern aspects and also in isolated areas with recent wind-drifted snow deposits of major thickness in all aspects, above 1900-2000 m it will be possible to have triggering of small avalanches generally with high additional load.

Forecast for Friday 27 March 2020, reliability: 80%

Possible isolated discharges and small human triggering with high additional load.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1500 m
T.average 1000: 4 °C
T.average 2000: -2 °C

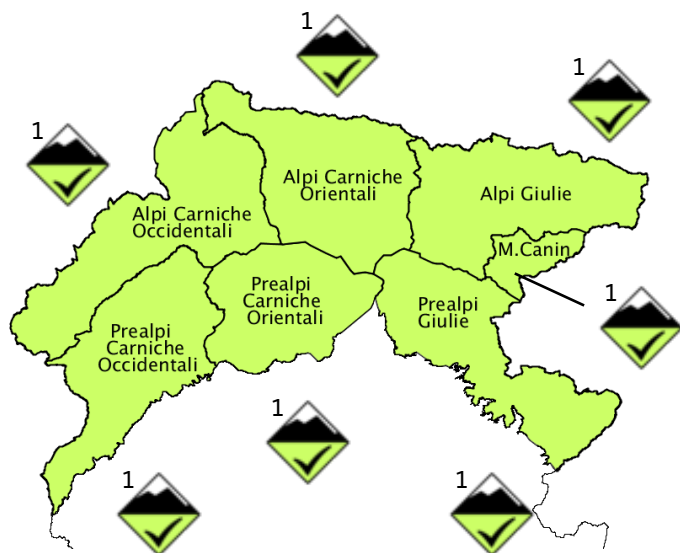

Weather by OSMER - ARPA FVG:

Mainly cloudy skies. Possible light snowfall on Tarvisio area above around 700-800 m.

Snow cover conditions and avalanche danger: Generally cloudy skies with some possible isolated and light rainfall on the Tarvisio area, snowy above around 700-800 m. Easterly winds at altitude with increase in temperatures during the day. The snowpack will be generally stable and well bonded everywhere. The avalanche danger will be 1 (low) all over the mountain area. Natural avalanche activity will be almost absent or, at the most, limited to isolated discharges from the walls and along the steepest gullies, mainly from the southern slopes. Human triggering of small avalanches, mainly with high additional load, can still occur on very steep slopes in the northern aspects and also on isolated areas with the presence of recent wind-drifted snow deposits of major thickness in all aspects, above 1900-2000 m altitude.

Forecast for Saturday 28 March 2020, reliability: 80%

Increase in temperatures; possible discharges during hot hours and small human triggering.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2000 m
T.average 1000: 6 °C
T.average 2000: 0 °C

Weather by OSMER - ARPA FVG:

Little cloudy to variable skies with glazing at high altitude. Increase in temperatures.

Snow cover conditions and avalanche danger: Little cloudy skies with increase in temperatures and freezing point at 2000 m. The avalanches danger will continue to be 1 (low) all over the mountain territory. Natural avalanche activity will be limited to discharges or small avalanches from the walls and along the steepest gullies, mainly from the southern slopes and during the hottest hours of the day. Human triggering of small avalanches will be possible on very steep slopes above 2000 m to the northern slopes, mainly with high additional load.
