

Situation of 27 March 2020 edition of the hours 14-next update 30-03-2020 hours 14, forecaster: GA

reliability: 80%

Both natural and human triggered avalanches are possible even with low additional load.

E 40 km/h

T max

Thermal Zero: 1500 m
T.average 1000: 4 °C
T.average 2000: -1 °C

Weather by OSMER - ARPA FVG:

Generally cloudy skies. Possible residual snowfall in the Tarvisio area. Winds decreasing. Increase in temperatures.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	104	0	-6,5	-2,5
VARMOST M.TE SIMONE	1870	139	2	-6,4	-1,4
SELLA NEVEA - LIVINAL LUNC	1837	345	10	-6,8	-2,6
PIANCAVALLO	1280	2	0	-1,5	3
TARVISIO	800	7	5	-1,4	1

Snow cover conditions and avalanche danger: The Alpine area was affected by light snowfalls in the western area, more consistent on the eastern one, particularly in the Tarvisio area, where 30-35 cm of new snow fell at altitude. New wind-drifted snow deposits have been created in all aspects due to the strong wind. On the Julian and Canin Alps the avalanche danger is 2 (moderate). Small and medium avalanches triggering are possible along the steep gullies. In deposit areas above 1800 m small and medium avalanches triggering is possible even with low additional load. In the Carnic Alps and the Prealps the avalanche danger is 1 (low). Discharges along steep gullies are possible. Above 1900 m on very steep slopes in the northern aspects and also in isolated areas with recent snow deposits with more consistent thickness in all aspects, small human triggered avalanches are possible, generally with high additional load.

Forecast for Saturday 28 March 2020, reliability: 80%

Possible both natural and human triggered avalanches during hot hours even with low additional load.

Thermal Zero: 2000 m
T.average 1000: 7 °C
T.average 2000: 0 °C

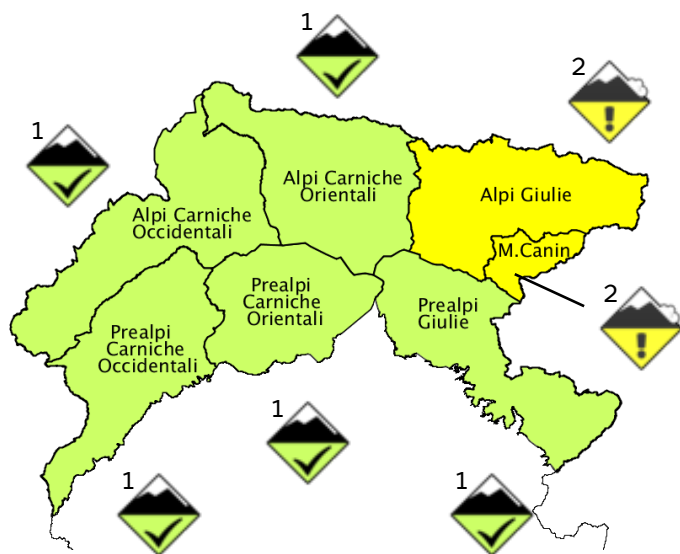

Weather by OSMER - ARPA FVG:

Variable in the morning, little cloudy during the day. Further increase in temperatures with freezing point at 2000 m

Snow cover conditions and avalanche danger: Little cloudy skies with increase in temperatures and freezing point at 2000 m. On the Julian and Canin Alps the avalanches danger will be 2 (moderate). Small and medium avalanches triggering will be possible along the steep gullies, in particular on the southern slopes and during the hottest hours. In deposit areas above 1800 m small and medium avalanches triggering is possible even with low additional load. In the Carnic Alps and the Prealps the avalanches danger will be 1 (low). Discharges along steep gullies will be possible in particular from the southern slopes and mainly in alpine area. Above 1900 m on very steep slopes in the northern aspects and also in isolated areas with small deposits of recent snow with more consistent thickness in all aspects, small human triggered avalanches will be possible, generally with high additional load.

Forecast for Sunday 29 March 2020, reliability: 80%

Possible both natural and human triggered avalanches during hot hours even with low additional load.

Thermal Zero: 2000 m
T.average 1000: 6 °C
T.average 2000: 0 °C

Weather by OSMER - ARPA FVG:

Little cloudy in the morning, variable from the afternoon, light snowfall from evening above around 1200 m.

Snow cover conditions and avalanche danger: Little cloudy in the morning, variable in the afternoon and light rainfall from the evening, snowy above 1200 m. On the Julian and Canin Alps the avalanches danger will be 2 (moderate). During hot hours along the steep gullies, particularly on the southern slopes, natural triggering of wet snow avalanches will be possible generally small in size. Small human triggered avalanches may also occur with low additional load in deposit areas located on the very steep slopes of the northern aspects above 1900 m. In the Carnic Alps and the Prealps the avalanches danger will be 1 (low). During hot hours along the steep gullies, particularly from the southern slopes, small natural triggering of wet snow avalanches will be possible, particularly in alpine area. The human triggering of small avalanches will be possible above 1900 m from the very steep slopes in the southern aspects mainly with high additional load.

Forecast for Monday 30 March 2020, reliability: 70%

Increase in danger due to new snowfall with possible both natural and triggered avalanches.

Thermal Zero: 1000 m
T.average 1000: 0 °C
T.average 2000: -6 °C

Weather by OSMER - ARPA FVG:

Overcast with snowfall initially above 1000 m altitude, decreasing up to around 300-400 m. Wind from NE at altitude.

Snow cover conditions and avalanche danger: A typical winter day with overcast skies and moderate to heavy snowfall. 30-40 cm of new snow may fall. It may snow up to 300-400 m altitude. In the Julian and Canin Alps the avalanches danger will be 2 (moderate) increasing to 3 (considerable). On the steep slopes located above the forest limit and in all aspects, both natural and triggered avalanches, small and medium in size, will be possible. The human triggered avalanches will be possible even with low additional load. In the Carnic Alps and the Prealps the avalanches danger will be 2 (moderate). On the steep slopes located above the forest limit and in all aspects, both natural and human triggered avalanches generally small in size will be possible. Locally, human triggered avalanches may also occur with low additional load.
