

Situation of 20 April 2020 edition of the hours 14-next update 22-04-2020 hours 14, forecaster: GA

reliability: 90%

Low avalanches danger everywhere with possible triggering during hot hours from steep slopes.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

E 30 km/h

T max

Thermal Zero: 2500 m
T.average 1000: 8 °C
T.average 2000: 2 °C

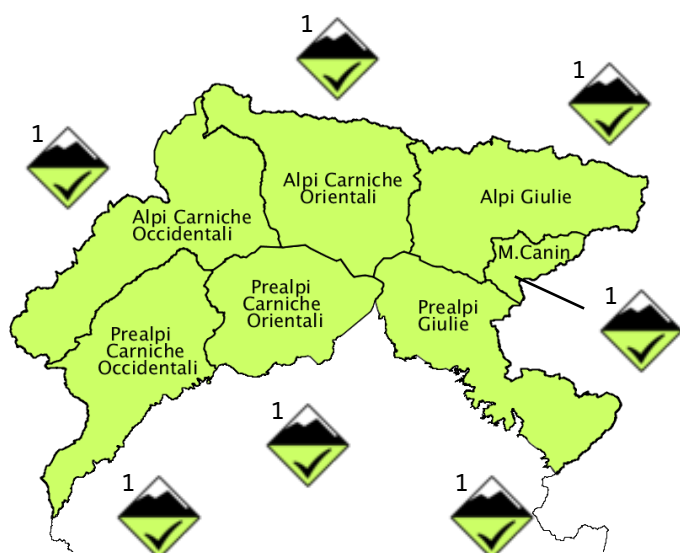

Weather by OSMER - ARPA FVG:
Overcast skies.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	50	0	2,6	15,8
VARMOST M.TE SIMONE	1870	70	0	3,6	14,5
SELLA NEVEA - LIVINAL LUNC	1837	287	0	2,9	12,2
PIANCAVALLO	1280	0	0	6	14
TARVISIO	800	0	0	6	20

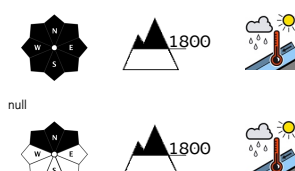

Snow cover conditions and avalanche danger: The snowpack is stable and well bounded everywhere despite the skies cloudiness, this due to the ongoing thermal decrease. Avalanches danger is 1 (low) all over the whole mountain territory. On the Alps, in the afternoon, sluffs and small avalanches are possible on very steep slopes in all aspects, particularly below 2100 m of altitude. On the Pre-Alpine belt, snow is only present in the Northern aspects. During hot hours, at the highest altitudes and on extreme slopes, sluffs of wet or moist snow are possible. Everywhere, still during the hot hours and on steep slopes, the human triggered avalanches small-in size of wet or moist snow can occur locally even with a low additional load.

Forecast for Tuesday 21 April 2020, reliability: 90%

Small natural avalanches are possible in the afternoon due to the surface layers weakness.

T.average 2000: 2 °C

Weather by OSMER - ARPA FVG:
Little cloudy skies. Strong wind from North-East at altitude.

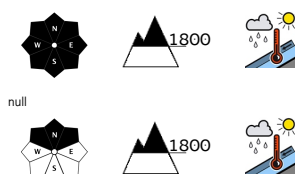

Snow cover conditions and avalanche danger: Little cloudy skies expected with static temperatures. The avalanches danger will be 1 (low) all over the whole mountain territory. On the Alps, in the afternoon, sluffs and small avalanches will be possible on very steep slopes in all aspects, particularly below 2200 m of altitude. On the Pre-Alps, still during hot hours and in the Northern aspects where the snow is still present, sluffs of wet or moist snow will be possible from the extreme slopes at the highest altitudes. Everywhere, still during the hot hours and on steep slopes, the human triggered avalanches small-in size of wet or moist snow could occur locally even with a low additional load.

Forecast for Wednesday 22 April 2020, reliability: 90%

Small natural avalanches of wet snow are possible in the afternoon.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

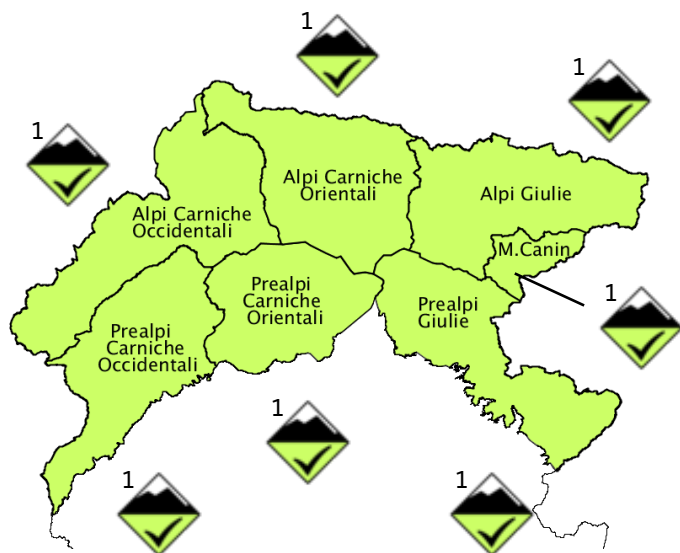

Thermal Zero: 2200 m
T.average 1000: 9 °C
T.average 2000: 1 °C

Weather by OSMER - ARPA FVG:
Clear or little cloudy skies.

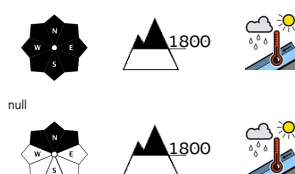

Snow cover conditions and avalanche danger: Clear or little cloudy skies expected with slight decrease in temperatures. The avalanches danger will be 1 (low) all over the whole mountain territory. On the Alps, sluffs will be possible on very steep slopes during the hot hours in all aspects, particularly below 2000-2100 m of altitude. On the Pre-Alps, still during hot hours and in the Northern aspects where the snow is still present, sluffs of wet or moist snow will be possible from the extreme slopes at the highest altitudes. Everywhere, still during the hot hours and on steep slopes, the human triggered avalanches small-in size of wet or moist snow could occur locally even with a low additional load.

Forecast for Thursday 23 April 2020, reliability: 80%

Small natural avalanches of wet snow are possible in the afternoon.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2400 m
T.average 1000: 9 °C
T.average 2000: 2 °C

Weather by OSMER - ARPA FVG:
Clear skies.

Snow cover conditions and avalanche danger: Clear skies expected, with freezing point at 2400 m. The avalanches danger will be 1 (low) all over the whole mountain territory. On the Alps, sluffs will be possible on very steep slopes during the hot hours in all aspects, particularly below 2100 m of altitude. On the Pre-Alps, still during hot hours and in the Northern aspects where the snow is still present, sluffs of wet or moist snow will be possible from the extreme slopes at the highest altitudes. Everywhere, still during the hot hours and on steep slopes, the human triggered avalanches small-in size of wet or moist snow could occur locally even with a low additional load.
