

Situation of 27 April 2020 edition of the hours 14-next update 30-04-2020 hours 14, forecaster: MM

reliability: 90%

Natural wet snow avalanches are possible from the afternoon.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2800 m
T.average 1000: 12 °C
T.average 2000: 4 °C

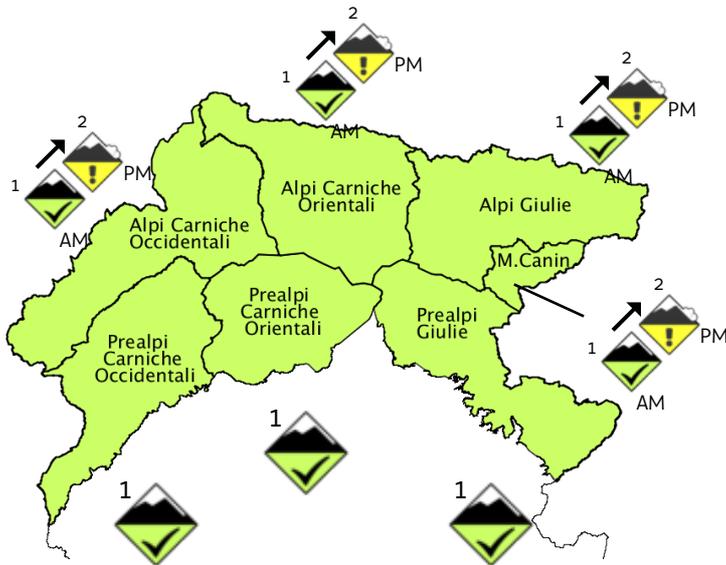

Weather by OSMER - ARPA FVG:
Scattered rain showers are possible from the afternoon.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	17	0	4	10
VARMOST M.TE SIMONE	1870	24	0	3	10
SELLA NEVEA - LIVINAL LUNC	1837	268	0	3	12
PIANCAVALLO	1280	0	0	5	10
TARVISIO	800	0	0	4	19

Snow cover conditions and avalanche danger: From the afternoon, scattered rain showers are expected that will reduce the snowpack bounding and will favor the restart phenomena of wet snow surface avalanches. On the Alps and Prealps the avalanches danger is 1 (low): above 1800, on very steep slopes where the snow is still present on the ground, natural avalanches are possible, generally of small in size. On the Prealps the possible avalanche triggering is limited to the northern extreme slopes. Everywhere, on very steep slopes, the human triggered avalanches of wet snow small in size can occur, in very isolated cases, even with low additional load.

Forecast for Tuesday 28 April 2020, reliability: 80%

Natural wet snow avalanches are possible form late afternoon, even medium-sized.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Thermal Zero: 2700 m
T.average 1000: 10 °C
T.average 2000: 4 °C

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

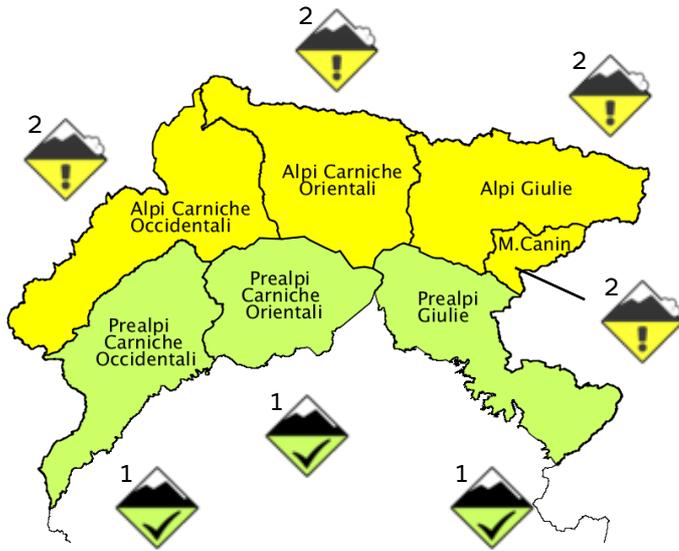

Weather by OSMER - ARPA FVG:
Light to moderate rainfall, more abundant from the evening.

Snow cover conditions and avalanche danger: Light to moderate rainfall is expected, more abundant from afternoon to evening, which will further reduce the snowpack bounding. On the Alps the avalanches danger will be 1 (low) in the morning increasing to 2 (moderate) from late afternoon: above 1800, on very steep slopes where the snow is still present on the ground, natural wet snow avalanches will be possible, small and even medium in size. On the Prealps the danger will be 1 (low): at the highest altitudes, small wet snow avalanches will be possible from the Northern extreme slopes. Everywhere, on very steep slopes, the human triggered avalanches of wet snow could occur locally even with low additional load.

Forecast for Wednesday 29 April 2020, reliability: 70%

On the Alps, danger 2 (moderate) with possible natural wet snow avalanches.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

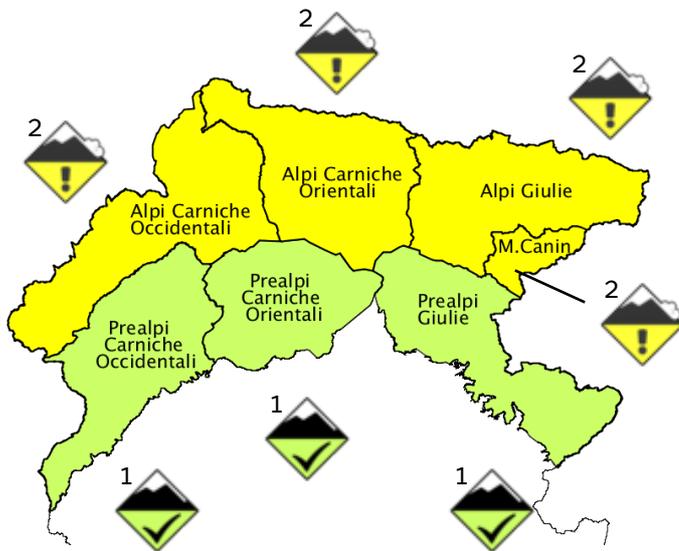

Thermal Zero: 2500 m
T.average 1000: 10 °C
T.average 2000: 3 °C

Weather by OSMER - ARPA FVG:
Moderate to abundant rainfall up to the morning, snow above 2000 m.

Snow cover conditions and avalanche danger: Still uncertain weather with generally moderate rainfall, locally even more abundant. Above 2000 m possible snowfall mainly in the Julian Alps and Canin. The expected avalanches danger on the Alps will be 2 (moderate): above 1800 m, on steep slopes where the snow is still present on the ground, the weight of rain may cause natural wet snow avalanches of small and even medium size. At higher altitudes, loose new snow triggering will also be possible from the steepest slopes. On steep grassy slopes, ground avalanches will also be possible. On the Prealps the danger will be 1 (low): at the highest altitudes, small wet snow avalanches will be possible from the Northern extreme slopes. Everywhere, on very steep slopes, the human triggered avalanches of wet or new snow could occur locally even with low additional load.

Forecast for Thursday 30 April 2020, reliability: 70%

On the Alps, danger 2 (moderate) with possible natural wet snow avalanches.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 2400 m
T.average 1000: 9 °C
T.average 2000: 2 °C

Weather by OSMER - ARPA FVG:
Rainfall from moderate to abundant especially during the night towards Friday. Snow above 1800 m.

Snow cover conditions and avalanche danger: Expected abundant rainfall mainly during the night towards Friday with possible snowfall above 1800 m, especially on the Julian Alps and Canin. Expected avalanches danger will be 2 (moderate): above 1800, on steep slopes where the snow is still present on the ground, the weight of rain may cause natural wet snow avalanches of small and even medium size. At higher altitudes, loose new snow triggering will also be possible from the steepest slopes. On steep grassy slopes, ground avalanches will also be possible. On the Prealps the danger will be 1 (low): at the highest altitudes, small wet snow avalanches will be possible from the Northern extreme slopes. Everywhere, on very steep slopes, the human triggering of small wet or new snow avalanches could occur locally even with low additional load. Possible danger increase from the evening on the Alps in relation to the expected amount of snow.
