

Situation of 30 December 2020 edition of the hours 14-next update 02-01-2021 hours 14, forecaster: GA

reliability: 70%

Both spontaneous and provoked avalanches, even large, are possible.

Alpi Giulie, M. Canin

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Prealpi Giulie

Thermal Zero: 1200 m
T.average 1000: 1 °C
T.average 2000: -5 °C

Weather by OSMER - ARPA FVG:

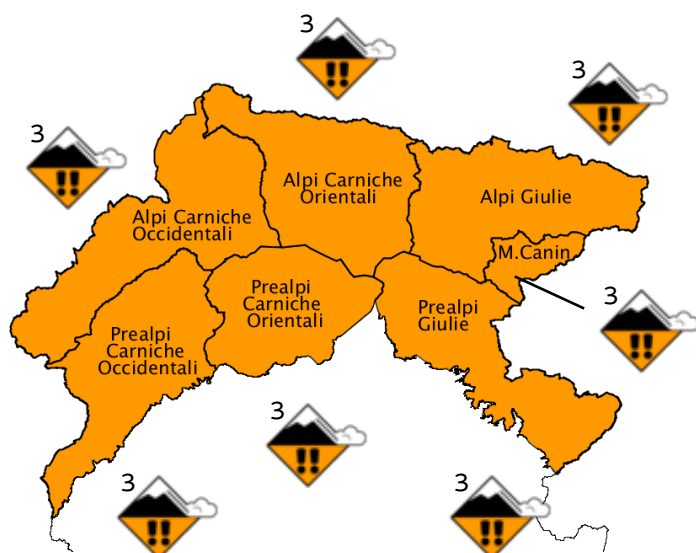

Variable cloudiness, probably more persistent in the east where some precipitation is possible.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	221	5	-5,6	1
VARMOST M.TE SIMONE	1870	150	15	-6	-3,5
SELLA NEVEA - LIVINAL LUNC	1837	315	30	-4,6	-3
PIANCAVALLO	1280	82	1	-3,6	0
TARVISIO	800	77	23	-1	1

Snow cover conditions and avalanche danger: 60 to 100 cm of new snow has fallen. In the Julian and Canin Alps, avalanche danger is 4 (high) while, in the Carnic Alps and in the Prealps, the danger level is 3 (considerable). Spontaneous, medium and large avalanches are possible along the usual steep slopes, even below the tree line in some cases. Locally, in the north, in the Julian and Canin Alps, the phenomena can also be very widespread. The triggering of avalanches, on steep slopes above the tree line, may still occur with the passage of single skiers-hikers, also causing large-scale phenomena. The amount of danger points increases with altitude. Some local avalanche phenomena may still affect sections of roads subject to danger above 700-900 m.

Forecast for Thursday 31 December 2020, reliability: 70%

Both spontaneous and provoked avalanches, even large, are possible.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1000 m
T.average 1000: 0 °C
T.average 2000: -7 °C

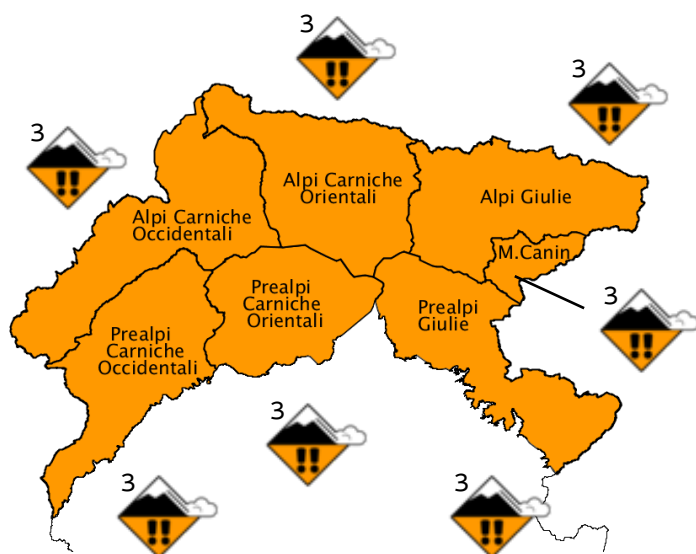

Weather by OSMER - ARPA FVG:

Cloudy to variable skies.

Snow cover conditions and avalanche danger: Light snowfall possible during the night, from partly cloudy to locally variable in the morning. Expected avalanche danger is 3 (considerable). Spontaneous, medium and large avalanches are possible slopes, even on very steep grassy slopes with greater diffusion on the southern sides. On extreme slopes, some phenomena may still originate even below the tree line. In areas with wind accumulations, on steep slopes above 1700-1800 m, the triggering of medium and even large avalanches is possible, mainly with high overload. On very steep slopes, triggering is not excluded, even with the passage of single skiers- hikers. The amount of danger points increases with altitude. Some local avalanche phenomena may still affect sections of roads subject to danger above 700-900 m.

Forecast for Friday 01 January 2021, reliability: 60%

New snowfall is expected and avalanche danger will increase in the evening.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1000 m
T.average 1000: 0 °C
T.average 2000: -5 °C

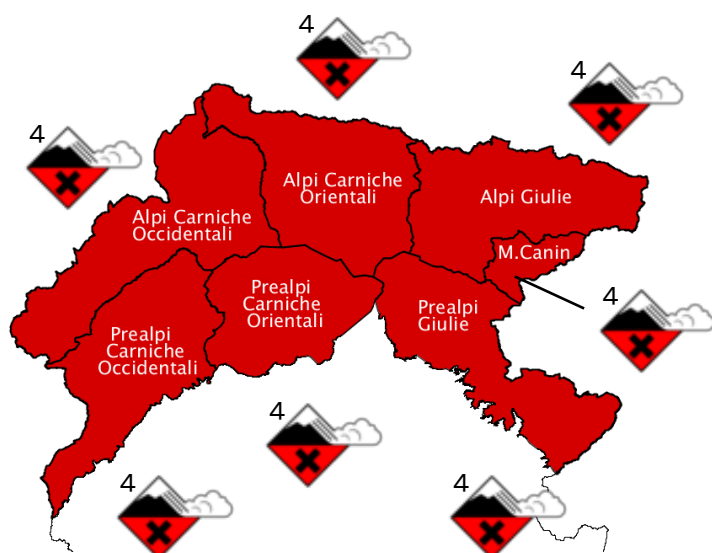

Weather by OSMER - ARPA FVG:

Cloudy to overcast skies. In the afternoon, heavy snowfall over 300-500 m in the Alps, 700 m in the Prealps.

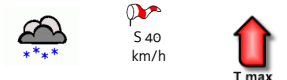

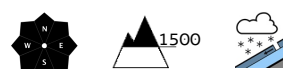

Snow cover conditions and avalanche danger: New snowfall is expected in the afternoon. Avalanche danger will be 3 (considerable). Above 1700-1800 m, in areas characterized by wind accumulations, on steep slopes, the triggering of medium and even large avalanches is possible, mainly with high overload. However, on very steep slopes and at higher altitudes, avalanches are not excluded even with the passage of single skiers-hikers, especially along northern exposures. Spontaneous triggering of avalanches, mainly of medium size, is still possible along the usual steep slopes. Starting in the evening, the amount and size of natural avalanches will increase in relation to the quantities of new snow expected, and the possibility that some of these may again affect the sections of roads subject to danger above 700 m of altitude will also increase.

Forecast for Saturday 02 January 2021, reliability: 60%

Avalanche danger 4 (high) due to new heavy to intense snowfall.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1300 m
T.average 1000: 1 °C
T.average 2000: -3 °C

Weather by OSMER - ARPA FVG:

Overcast skies, heavy to intense rain; snow over 300-500 m in the Alps, 700 m in the Pre-Alps.

Snow cover conditions and avalanche danger: Heavy to intense snowfall is expected, which will bring the avalanche danger level to 4 (high) throughout the territory. Spontaneous, medium and large avalanches are probable at all exposures, both with loose cohesion and slabs along the usual steep slopes, even below the tree line. Very large avalanches are also possible locally in the north. Roads subject to avalanche danger, above 500-700 m in altitude, will again be a hazard. On steep slopes, the triggering of avalanches, even large, may still occur with the passage of single skiers-hikers. Conditions will still be unfavorable for hiking.
