

Situation of 04 January 2021 edition of the hours 14-next update 05-01-2021 hours 14, forecaster: MM

reliability: 80%

Avalanche danger 4 (high), chance of natural and triggered avalanches, even large ones.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1000 m
T.average 1000: 0 °C
T.average 2000: -5 °C

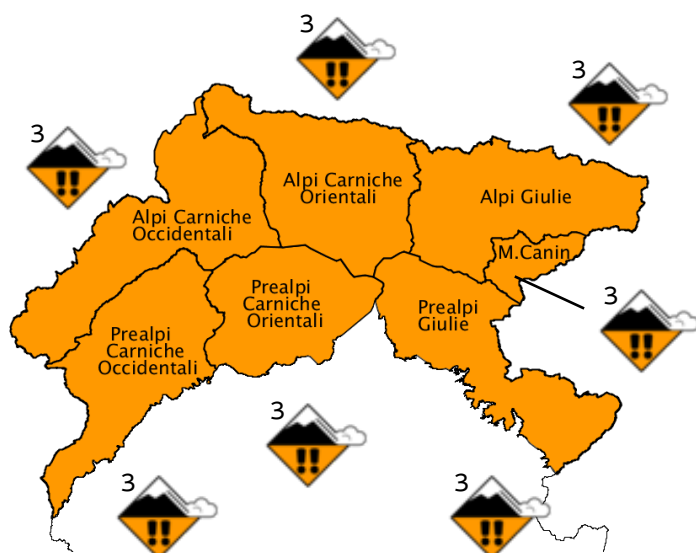

Weather by OSMER - ARPA FVG:
Mostly cloudy skies with some precipitation.
Possible weak snowfall above 600 m.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	270	0	-7	-3
VARMOST M.TE SIMONE	1870	194	0	-7	0
SELLA NEVEA - LIVINAL LUNC	1837	386	0	-5	-1
PIANCAVALLO	1280	136	0	-8	0
TARVISIO	800	99	0	-1	3

Snow cover conditions and avalanche danger: Weakly consolidated snowpack on many steep slopes, due to windy snow accumulations, which are sometimes difficult to identify. Danger points and their diffusion increase at higher altitude. Throughout the territory, avalanche danger will reach 4 (high): beyond the tree line, at all exposures on steep slopes, not yet released natural avalanches are possible, even large sized in isolated cases. Triggered avalanches, even large ones, especially on northern slopes, may still occur with the passage of single skiers-hikers. Some avalanche phenomena may still affect sections of roads subject to danger above 900 m. The risk of ground avalanches, even large ones, still exists on very steep grassy slopes. Utmost caution is required for excursions, since conditions are not yet favorable.

Forecast for Tuesday 05 January 2021, reliability: 80%

Chance of triggered avalanches, even large ones, with low overload.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

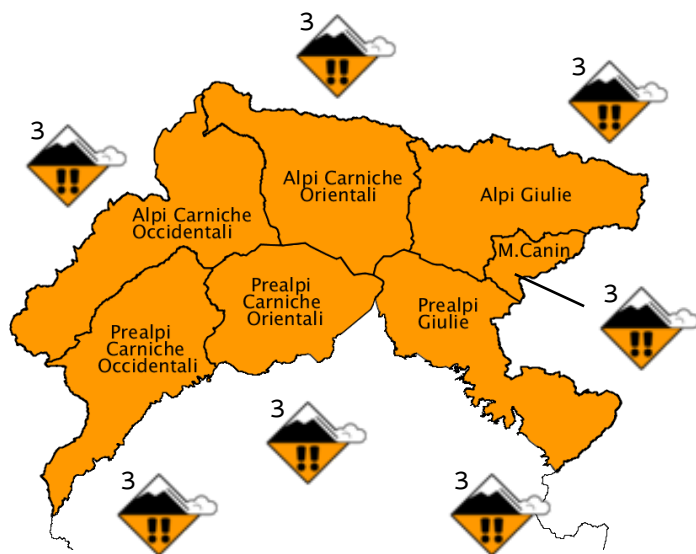

Thermal Zero: 1000 m
T.average 1000: 1 °C
T.average 2000: -6 °C

Weather by OSMER - ARPA FVG:
Mostly cloudy skies with some precipitation.
Chance of light snowfall above 400 m.

Snow cover conditions and avalanche danger: On a variably cloudy day, light snowfall is expected starting in the evening. Slowly consolidating snowpack, but there are still many danger zones, especially at a high altitude. Throughout the entire mountain territory, avalanche danger will reach 3 (considerable): beyond the tree line, at all exposures, there is a chance of natural avalanches, even of medium size, on steep slopes, not yet released. On all slopes, accumulations of windy snow which, even if weakly stressed, may cause avalanches, especially on northern slopes, even large sized. Some avalanche phenomena may still affect sections of roads subject to danger above 900 m. The risk of ground avalanches, even large ones, still exists on very steep grassy slopes. Utmost caution is required for excursions, since conditions are not yet favorable.

Forecast for Wednesday 06 January 2021, reliability: 70%

Chance of triggered avalanches, even large ones, with low overload.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 800 m
T.average 1000: -2 °C
T.average 2000: -8 °C

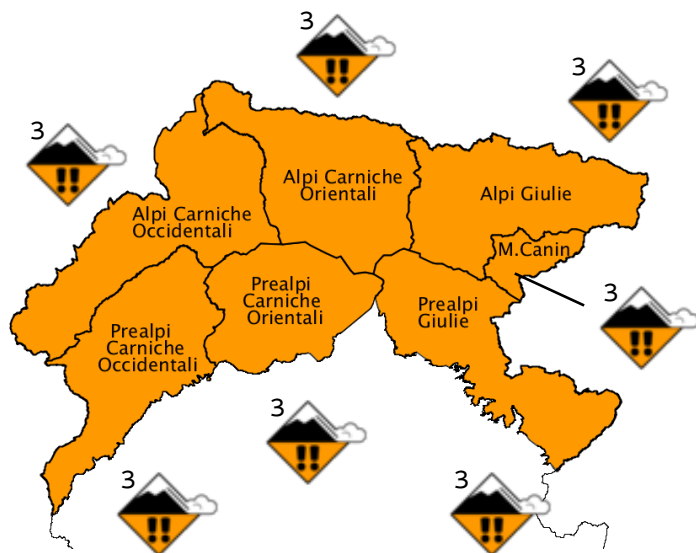

Weather by OSMER - ARPA FVG:

Mostly cloudy skies with some precipitation.
Chance of light snowfall above 400 m.

Snow cover conditions and avalanche danger: Variable skies with chance of weak residual snowfall during the night which, will make it more difficult to identify dangerous zones. Moderately or weakly bonded snowpack on many steep slopes. Throughout the entire territory, avalanche danger will reach 3 (considerable): beyond the tree line, at all exposures, accumulations of wind, even weakly stressed, may cause avalanches, especially on northern slopes, even large sized. Due to the new snowfall, especially from the walls and rocky areas, natural avalanches, even medium sized, are possible. Some avalanche phenomena may still affect sections of roads subject to danger above 900 m. A risk of ground avalanches, even large ones, still exists on very steep grassy slopes. Utmost caution will be required for excursions, since conditions are not yet favorable.

Forecast for Thursday 07 January 2021, reliability: 70%

Change of triggered avalanches, even large ones, with low overload.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 400 m
T.average 1000: -4 °C
T.average 2000: -9 °C

Weather by OSMER - ARPA FVG:

Generally cloudy skies and colder.

Snow cover conditions and avalanche danger: A drop in temperatures is expected. Throughout the entire territory, avalanche danger will reach 3 (considerable): beyond the tree line, at all exposures, accumulations of wind, even weakly stressed, may cause avalanches, especially on northern slopes, even large sized. Natural release activity will be very limited. Danger zones and their diffusion increase at higher altitudes. At lower altitudes, danger will be more limited. A risk of ground avalanches, even large ones, still exists on very steep grassy slopes.
