

Situation of 08 January 2021 edition of the hours 14-next update 11-01-2021 hours 14, forecaster: MM

reliability: 80%

Avalanche danger 3 (considerable) on the Alps beyond tree line.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 700 m
T.average 1000: -3 °C
T.average 2000: -9 °C

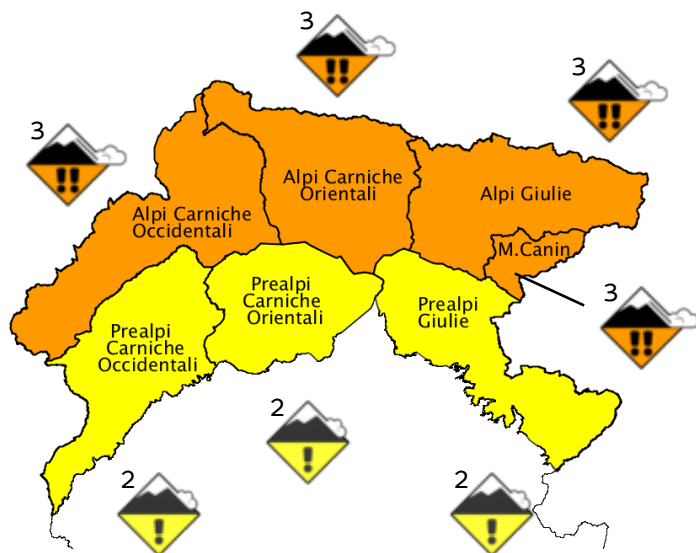

Weather by OSMER - ARPA FVG:
Usually clear or partly cloudy skies.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	257	0	-11	-3
VARMOST M.TE SIMONE	1870	179	0	-11	-2
SELLA NEVEA - LIVINAL LUNC	1837	394	0	-11	-6
PIANCAVALLO	1280	137	0	-10	-2
TARVISIO	800	82	0	-5	0

Snow cover conditions and avalanche danger: Slowly consolidating snowpack, especially at high altitudes, dangerous conditions remain due to the presence of fragile layers and unstable accumulations of wind-blown snow. On the Alps above the tree line, avalanche danger reaches 3 (considerable): on the slopes, not yet released, especially on northern slopes, chances of triggered avalanches, even large ones, with the passage of single skiers-hikers. On the Pre-Alps and Alps below the tree line, avalanche danger reaches 2 (moderate): chances of triggered avalanches, mostly of medium size, generally with a strong overload. In the north, at higher altitudes, danger will increase. Throughout the entire area, the most dangerous points are steep gullies, areas under ridges and forks, abrupt changes in slope, and the zones with outcropping rocks. A chance of ground avalanches, even large-sized, on very steep grassy slopes, still exists.

Forecast for Saturday 09 January 2021, reliability: 80%

Avalanche danger 3 (considerable) on the Alps beyond the tree line.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

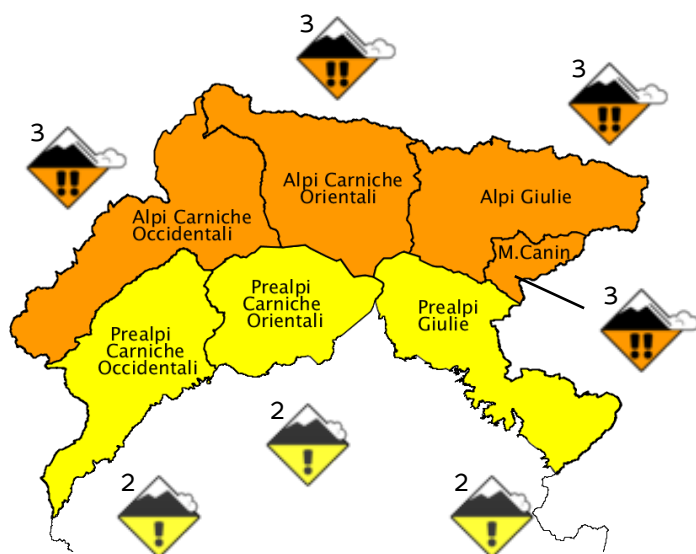

Thermal Zero: 600 m
T.average 1000: -5 °C
T.average 2000: -9 °C

Weather by OSMER - ARPA FVG:
Usually clear or partly cloudy skies. Variable from the afternoon.

Snow cover conditions and avalanche danger: Clear skies, even during the night, with very low temperatures that could favor the formation of additional fragile layers, making accumulations of wind-blown snow even more unstable. On the Alps, above the tree line, avalanche danger will reach 3 (considerable): on non-released slopes, especially northern slopes, chance of triggered avalanches, even large ones, with the passage of single skiers-hikers. On the Prealps and Alps, below the tree line, avalanche danger reaches 2 (moderate): chance of triggered avalanches, even of medium size, generally with a strong overload. In the north, at higher altitudes, danger will increase. Throughout the entire territory, the most dangerous points are steep gullies, areas under ridges and forks, abrupt changes in slope, and the zones with outcropping rocks, and a chance of ground avalanches, even large-sized, on very steep grassy slopes, still exists.

Forecast for Sunday 10 January 2021, reliability: 70%

Avalanche danger 3 (considerable) on the Alps due dangerous high-altitude zones.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

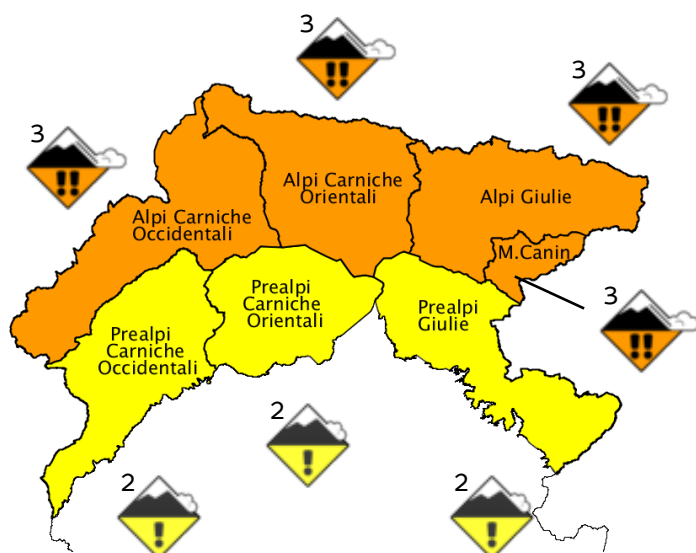

Thermal Zero: 500 m
T.average 1000: -6 °C
T.average 2000: -8 °C

Weather by OSMER - ARPA FVG:
Variable skies. Clear or partly cloudy in the afternoon.

Snow cover conditions and avalanche danger: Low temperatures are still expected, which could favor the formation of addition fragile layers, making accumulations of wind-blown snow even more unstable. On the Alps, above the tree line, avalanche danger will be 3 (considerable): on non-released slopes, especially on northern slopes, chance of triggered avalanches, even large-sized, with the passage of single skiers-hikers. On the Prealps and in the Alps, below the tree line, avalanche danger reaches 2 (moderate): chance of triggered avalanches, even of medium size, generally with a strong overload. In the north, at higher altitudes, danger will increase. Throughout the entire territory, the most dangerous points are steep gullies, areas under ridges and forks, abrupt changes in slope, and the zones with outcropping rocks, and a chance of ground avalanches, even large-sized, on very steep grassy slopes, still exists.

Forecast for Monday 11 January 2021, reliability: 70%

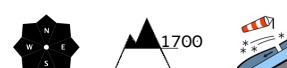

Avalanche danger 3 (considerable) on the Alps due dangerous high-altitude zones.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 400 m
T.average 1000: -6 °C
T.average 2000: -6 °C

Weather by OSMER - ARPA FVG:
Clear or partly cloudy skies.

Snow cover conditions and avalanche danger: Still cold with clear skies and winds from the east, which will favor the formation of new accumulations, leading to an increase in dangerous zones, especially under ridges, forks and along gullies. On the Alps above the tree line, avalanche danger will reach 3 (considerable): on all slopes, with wind-blown snow accumulations, chance of avalanches, even large-sized, with the passage of single skiers-hikers. On the Prealps and Alps, below the tree line, avalanche danger reaches 2 (moderate): chance of triggered avalanches, even of medium size, generally with a strong overload. In the north, at higher altitudes, danger will increase. Despite the low temperatures throughout the entire territory, a chance of ground avalanches, even large-sized, on very steep grassy slopes, still exists. At high altitudes, a great ability to assess danger will be required.
