

Situation of 15 January 2021 edition of the hours 14-next update 18-01-2021 hours 14, forecaster: AM

reliability: 80%

#### At high altitudes, detachable wind-blown accumulations, even with weak overload.

Thermal Zero: 500 m T.average 1000: -6 °C T.average 2000: -9 °C

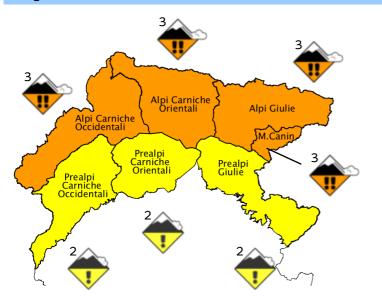

Weather by OSMER - ARPA FVG: Clear or partly cloudy skies.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	241	0	-9,5	-4,5
VARMOST M.TE SIMONE	1870	160	0	-10	-3,5
SELLA NEVEA - LIVINAL LUNC	1837	340	0	-10	-5
PIANCAVALLO	1280	122	0	-7	4,5
TARVISIO	800	77	0	-14	2,5

Snow cover conditions and avalanche danger: Weak snowfall accompanied by strong winds characterized yesterday's weather. New accumulations have formed above the tree line, at all exposures. On the Alps, above the tree line, avalanche danger is 3 (considerable). In areas with wind-blown accumulations, at all exposures, chance of triggered slabs, usually medium-sized, even with the passage of single skiers-hikers, especially on steep slopes. On the Pre-Alps and Alps below the tree line, avalanche danger is 2 (moderate). Chance of triggered small- and locally medium-sized avalanches, mainly with high overload. Despite the low temperatures throughout the territory, the risk of ground avalanches, generally medium-sized, on very steep grassy slopes between 1,500-2,000 m, still exists.

# Forecast for Saturday 16 January 2021, reliability: 70%

## At high altitudes, detachable wind-blown accumulations, even with weak overload.

Thermal Zero: 400 m T.average 1000: -7 °C T.average 2000: -12 °C

Weather by OSMER - ARPA FVG: Clear skies

Snow cover conditions and avalanche danger: Clear skies with cold temperatures that could favor the formation of additional fragile layers under wind-blown accumulations. On the Alps above the tree line, avalanche danger will reach 3 (considerable). In areas with wind-blown accumulations, at all exposures, chance of triggered slabs, usually medium-sized, even with the passage of single skiers-hikers, especially on steep slopes. Good local hazard assessment skills will be required for excursions. On the Prealps and Alps below the tree line, avalanche danger will reach 2 (moderate). Chance of triggered small- and locally medium-sized avalanches, mainly with strong overload. Throughout the territory, the chance of ground avalanches, even medium-sized, on very steep grassy slopes between 1,500 and 2,000 m, especially in the south, still exists.

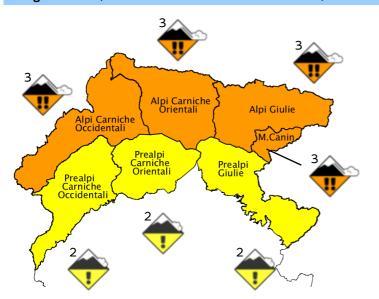

# **AVALANCHE BULLETIN** n.19 the 15 January 2021

Forecast for Sunday 17 January 2021, reliability: 60%

# At high altitudes, detachable wind-blown accumulations, even with weak overload.

**~** NW/ 10 Thermal Zero: 300 m

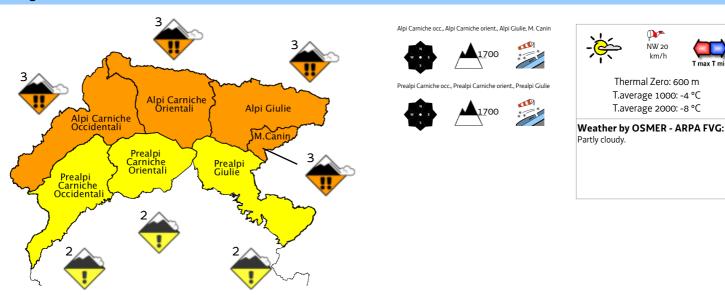

T.average 1000: -5 °C T.average 2000: -12 °C

Weather by OSMER - ARPA FVG: Varialbe skies, cold day.

Snow cover conditions and avalanche danger: Variable skies expected and continued temperatures below zero. On the Alps above the tree line, avalanche danger will reach 3 (considerable). In areas with wind-blown accumulations, at all exposures, chance of triggered slabs, usually medium-sized, even with the passage of a single skiers-hikers, especially on steep slopes. Good local hazard assessment skills will be required for excursions. On the Prealps and Alps below the tree line, avalanche danger will reach 2 (moderate). Chance of triggered small- and locally medium-sized avalanches, mainly with strong overload. Throughout the territory, chance of ground avalanches, even medium-sized, on very steep grassy slopes between 1,500 and 2,000 m, especially in the south, still exists.

Forecast for Monday 18 January 2021, reliability: 60%

## At high altitudes, detachable wind-blown accumulations, even with low overload.

Snow cover conditions and avalanche danger: Cloudy skies expected. On the Alps above the tree line, avalanche danger will reach 3 (considerable). In areas with wind-blown accumulations, at all exposures, chance of triggered slabs, usually medium-sized, even with the passage of single skiers-hikers, especially on steep slopes. Good local hazard assessment skills will be required for excursions,. On the Prealps and Alps below the tree line, avalanche danger will reach 2 (moderate). Chance of triggered small- and locally medium-sized avalanches, mainly with strong overload. Throughout the territory, chance of ground avalanches, medium-sized, on very steep grassy slopes between 1,500 and 2,000 m, especially in the south, still exists.
