

Situation of 18 January 2021 edition of the hours 14-next update 20-01-2021 hours 14, forecaster: GA

reliability: 80%

**At high altitudes, detachable wind-blown accumulations, even with weak overload.**

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 600 m  
T.average 1000: -3 °C  
T.average 2000: -8 °C

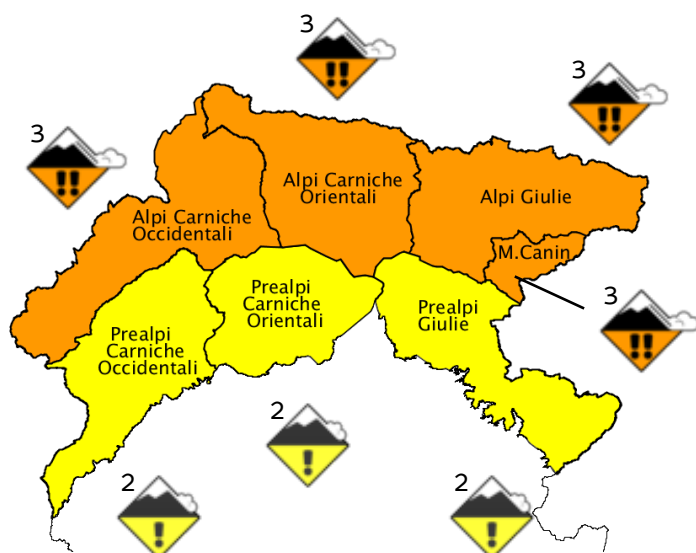

**Weather by OSMER - ARPA FVG:**  
Mostly cloudy skies.

**Snow cover conditions and avalanche danger:** The weekend was characterized by low temperatures, which did not favor consolidation of the snowpack. Throughout the area, above the tree line, wind-blown accumulations formed, sometimes even substantial, which can be unstable if overloaded, due to the presence of fragile structures below them. On the Alps above the tree line, avalanche danger is 3 (considerable). In areas with wind-blown accumulations, at all exposures, chance of triggered slabs, usually medium-sized, even with the passage of single skiers-hikers, especially on steep slopes. On the Prealps and Alps below the tree line, avalanche danger is more localized and is 2 (moderate). Chance of triggered small- and locally medium-sized avalanches, mainly with high overload. The chance of latent ground avalanches, even of medium size, throughout the area, on very steep grassy slopes between 1,500-2,000 m, still exists.

Forecast for Tuesday 19 January 2021, reliability: 80%

**Above the tree line, easily detachable wind-blown accumulations.**

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 700 m  
T.average 1000: -3 °C  
T.average 2000: -5 °C

**Weather by OSMER - ARPA FVG:**  
Mostly cloudy skies, slight rise in temperatures.

**Snow cover conditions and avalanche danger:** Lightly cloudy to variable skies with a slight rise in temperatures, along with light winds that will keep the stable conditions of the snowpack unchanged. On the Alps above the tree line, avalanche danger will be 3 (considerable). In areas with wind-blown accumulations, at all exposures, chance of triggered slabs, usually medium-sized, even with the passage of single skiers-hikers, especially on steep slopes. Caution and good local risk assessment skills will be required for excursions. On the Prealps and Alps below the tree line, avalanche danger will be 2 (moderate). Chance of triggered small- and locally medium-sized avalanches, in areas with wind-blown accumulations, mainly with strong overload. Throughout the area, the chance of latent ground avalanches, even medium-sized, on very steep grassy slopes between 1,500 and 2,000 m, still exists.

Forecast for Wednesday 20 January 2021, reliability: 80%

Above the tree line, easily detachable wind-blown accumulations.

Alpi Carniche occ., Alpi Carniche orient., Alpi Giulie, M. Canin

Prealpi Carniche occ., Prealpi Carniche orient., Prealpi Giulie

Thermal Zero: 900 m  
T.average 1000: -2 °C  
T.average 2000: -3 °C

#### Weather by OSMER - ARPA FVG:

On the Prealps skies will vary from variable to cloudy, better weather in the inner alpine areas.

**Snow cover conditions and avalanche danger:** Overcast skies in the Prealps, variable in the Alps, winds from SW at high altitudes, which may form new accumulations, especially in the N-NE. On the Alps above the tree line, avalanche danger will be 3 (considerable). In areas with wind-blown accumulations, at all exposures, chance of triggered slabs, usually medium-sized, even with the passage of single skiers-hikers, especially on steep slopes. Small natural avalanches in leeward areas are also possible. Caution and good, local risk assessment skills will be required for excursions. On the Prealps and in the Alps below the tree line, avalanche danger will be 2 (moderate). Chance of triggered small- and locally medium-sized avalanches, in areas with wind-blown accumulations, and mainly with strong overload. Throughout the area, the chance of latent ground avalanches, even medium-sized, on very steep grassy slopes between 1,500 and 2,000 m, still exists.

Forecast for Thursday 21 January 2021, reliability: 70%

Chance of new light or moderate snowfall, which will increase avalanche danger.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1300 m  
T.average 1000: 1 °C  
T.average 2000: -2 °C

#### Weather by OSMER - ARPA FVG:

Cloudy with moderate rainfall, more consistent in the eastern areas, snowy above 800-1200 m.

**Snow cover conditions and avalanche danger:** New, light to moderate snowfall is expected above 800-1,200 m, accompanied by sustained winds from SW at high altitudes. The new snow will hide dangerous conditions constituted by old wind-blown accumulations already present, and will form new ones, especially at N and NE exposures. Avalanche danger will be 3 (considerable) throughout the territory. On steep slopes, above the tree line, and at all exposures, but locally also inside the woods on steep slopes, chance of triggered slabs, usually medium-sized, even with the passage of single skiers-hikers. Chance of spontaneous avalanches, both loose and slab, from slopes and along steep slopes, at all exposures. Caution and good, local risk assessment skills will be required for excursions. Throughout the area, the chance of latent ground avalanches, even medium-sized, on very steep grassy slopes between 1,500 and 2,000 m, still exists.
