

Situation of 25 January 2021 edition of the hours 14-next update 27-01-2021 hours 14, forecaster: MM

reliability: 80%

Avalanche danger 3 (considerable) throughout the territory

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 800 m
T.average 1000: -2 °C
T.average 2000: -8 °C

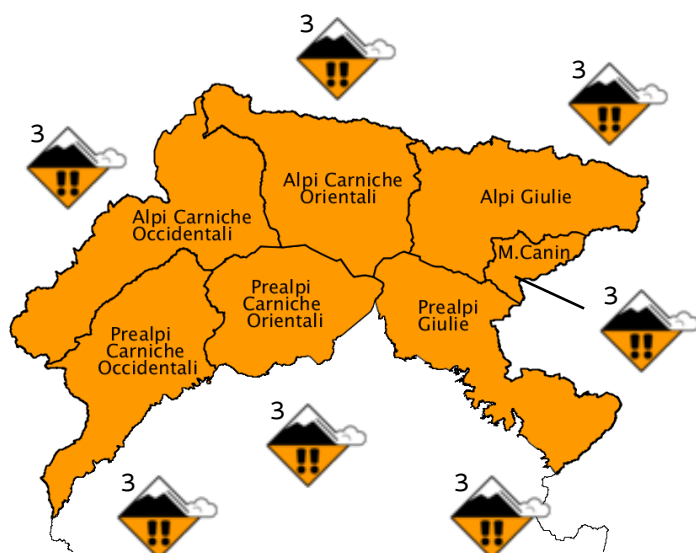

Weather by OSMER - ARPA FVG:
Variable skies with possible isolated weak snowfall.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	301	15	-10	-5
VARMOST M.TE SIMONE	1870	207	0	-10	-4
SELLA NEVEA - LIVINAL LUNC	1837	467	9	-11	-4
PIANCAVALLO	1280	102	0	-9	-2
TARVISIO	800	61	0	-12	1,5

Snow cover conditions and avalanche danger: Snowpack is slowly consolidating, but dangerous conditions remain, especially at high altitudes, due to the presence of snow-blown accumulations. On the Alps and Prealps, avalanche danger is 3 (considerable). Chance of natural avalanches on slopes that have not yet been triggered and, particularly, on steep sunny slopes, large phenomena may also form. These could also be triggered ground avalanches on steep grassy slopes. Also, at all exposures, on steep slopes above the tree line, avalanches may occur, even large-sized ones in several cases, with the passage of single skiers-hikers. On the Alps, continued chance of several avalanches may still affect roads. Excursions require a careful choice of itinerary, especially at higher altitudes.

Forecast for Tuesday 26 January 2021, reliability: 80%

Avalanche danger 3 (considerable) throughout the territory.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

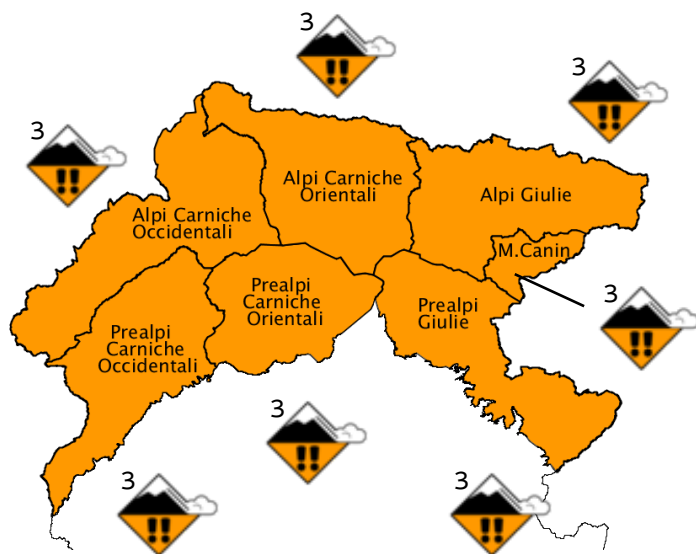

Thermal Zero: 700 m
T.average 1000: -3 °C
T.average 2000: -10 °C

Weather by OSMER - ARPA FVG:
Clear or partly cloudy skies with moderate to sustained winds at high altitudes.

Snow cover conditions and avalanche danger: Clear or partly cloudy skies with falling temperatures and also sustained winds from the N at high altitudes, which will lead to the formation of new snow accumulations. On the Alps and Prealps, avalanche danger will be 3 (considerable). On steep grassy slopes, chance of triggered ground avalanches, medium- and large-sized, particularly on southern slopes. Small- to medium-sized natural avalanches are also possible, especially in leeward areas. Above the tree line, chance of triggered avalanches, even large-sized in isolated cases, also with the passage of single skiers-hikers. Excursions will require a careful choice of itinerary, especially at higher altitudes. On the Alps, the chance of several avalanches affecting roads still exists.

Forecast for Wednesday 27 January 2021, reliability: 70%

Avalanche danger 3 (considerable) due to the presence of dangerous areas at high altitudes.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

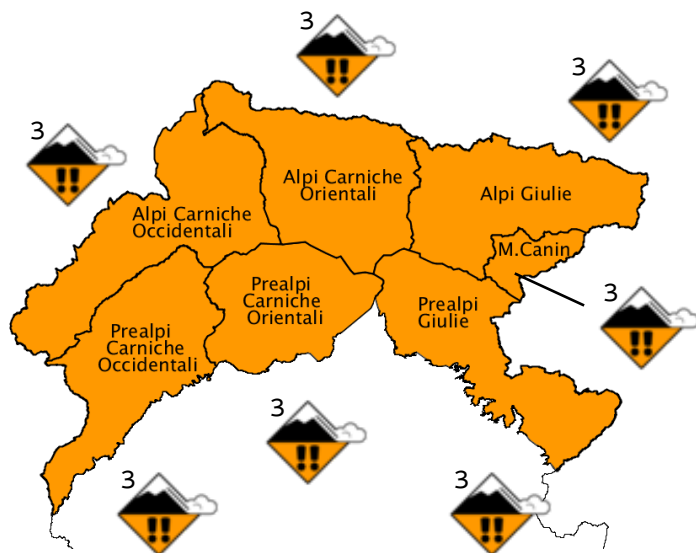

Thermal Zero: 600 m
T.average 1000: -4 °C
T.average 2000: -9 °C

Weather by OSMER - ARPA FVG:
Variably cloudy.

Snow cover conditions and avalanche danger: Low temperatures are still expected, which could favor the formation of fragile layers in the snowpack, making accumulations of wind-blown snow more unstable. On the Alps and Prealps, avalanche danger will be 3 (considerable), Natural avalanche activity will decrease, even if, on sunnier, steep grassy slopes, the chance of ground avalanches, even large-sized ones, still exists. At all exposures, on steep slopes above the tree line, triggered avalanches are possible, large-sized ones in several isolated cases, even with passage of single skiers-hikers. Across the area, the most dangerous areas will be steep gullies, areas under ridges and forks, and sudden changes in slope. Excursions will require a careful choice of the itinerary, especially at higher altitudes. On the Alps, the chance of several avalanches that may affect roads still exists.

Forecast for Thursday 28 January 2021, reliability: 70%

Avalanche danger 3 (considerable) due to the presence of dangerous areas at high altitudes.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1000 m
T.average 1000: -1 °C
T.average 2000: -4 °C

Weather by OSMER - ARPA FVG:
Clear and cold in the morning, cloudy in the afternoon.

Snow cover conditions and avalanche danger: Clear skies and a slight increase in temperatures starting in the afternoon. Especially at high altitudes, unstable snow accumulations are possible, even recently formed. On the Alps and Prealps, avalanche danger will be 3 (considerable). Natural avalanche activity will decrease even if, on sunnier, steep grassy slopes, the chance of ground avalanches, even large-sized ones, still exists. At all exposures, on steep slopes above the tree line, triggered avalanches are possible, large-sized ones in several isolated cases, even with passage of single skiers-hikers. Across the area, the most dangerous areas will be steep gullies, areas under ridges and forks, sudden changes in slope, and areas with outcropping rocks. Wxcursions will require a careful choice of itinerary, especially at higher altitudes.
