

Situation of 29 January 2021 edition of the hours 14-next update 01-02-2021 hours 14, forecaster: MM

reliability: 80%

**Avalanche danger 3 (considerable) due to the presence of unstable wind-blown snow accumulations.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

NW 20  
km/h

T max T min

Thermal Zero: 1600 m  
T.average 1000: -1 °C  
T.average 2000: 1 °C

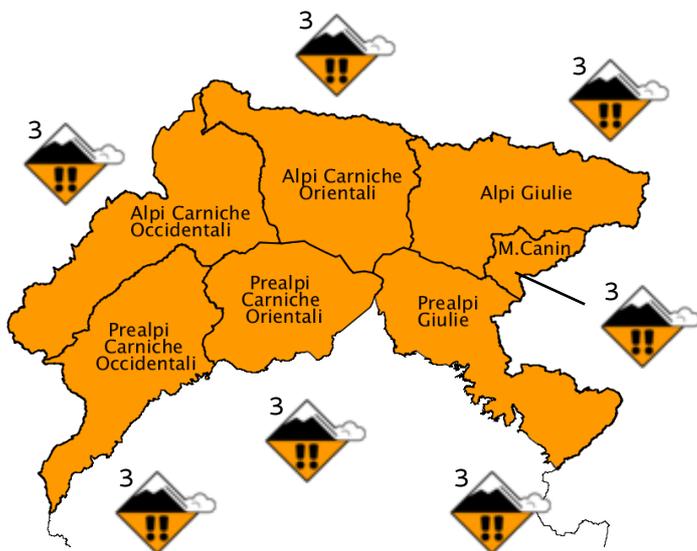

**Weather by OSMER - ARPA FVG:**  
Variable to cloudy skies. Chance of snow  
flurries over 500-700 m.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	271	0	-8,2	2,5
VARMOST M.TE SIMONE	1870	189	0	-5,6	2,7
SELLA NEVEA - LIVINAL LUNC	1837	418	0	-4,9	4
PIANCAVALLO	1280	98	0	-8,2	4,5
TARVISIO	800	62	0	-2,8	1,4

**Snow cover conditions and avalanche danger:** The alternation of temperatures in recent days is slowly improving the consolidation of the snowpack. However, especially at higher altitudes and, in general, where wind activity has been more intense, such as under crests and forks, critical conditions remain due to the presence of unstable wind-blown snow accumulations. On the Alps and Prealps, avalanche danger is 3 (considerable): at all exposures, on steep slopes above the tree line, the chance of slab avalanches still exists, generally medium-sized, and even with the passage of single skiers-hikers. Danger decreases below the tree line. Spontaneous activity is also decreasing, but there is still a risk of ground avalanches, even large ones, on southern slopes. In some cases, these could reach the valley floor. Beware of glide cracks in the snowpack.

Forecast for Saturday 30 January 2021, reliability: 80%

**Avalanche danger 3 (considerable) due to the presence of unstable wind-blown snow accumulations.**

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

NW 20  
km/h

T max T min

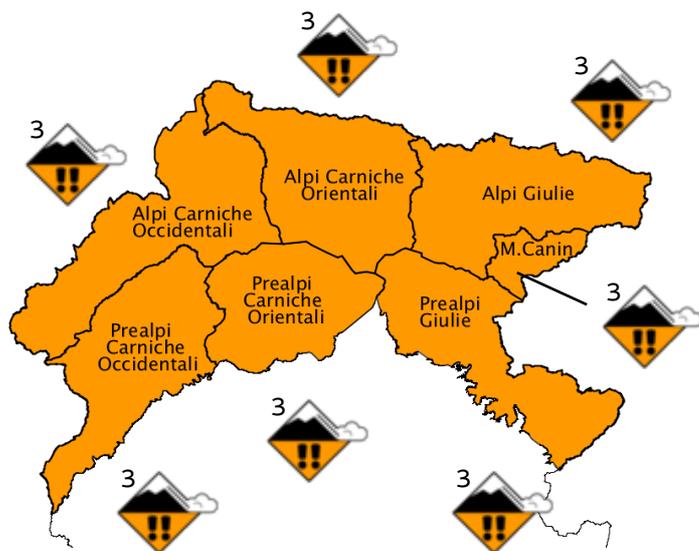

Thermal Zero: 1800 m  
T.average 1000: 2 °C  
T.average 2000: -1 °C

**Weather by OSMER - ARPA FVG:**  
Variable skies with light snowfall starting in  
the evening.

**Snow cover conditions and avalanche danger:** Variable skies. Weak snowfall expected starting in the evening. Especially at high altitudes, the snowpack will be moderately consolidated, due to the presence of unstable accumulations of wind-blown snow. On the Alps and Prealps, avalanche danger will be 3 (considerable): at all exposures, on steep slopes above the tree line, the chance of slab avalanches still exists, generally medium-sized, and even with the passage of single skiers-hikers. Danger decreases below the tree line. Spontaneous activity is also decreasing, but there is still a risk of ground avalanches, even large ones, on southern slopes. In some cases, these could reach the valley floor. Beware of glide cracks in the snowpack.

Forecast for Sunday 31 January 2021, reliability: 70%

Generally moderate new snowfall is expected.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 1000 m  
T.average 1000: 0 °C  
T.average 2000: -3 °C

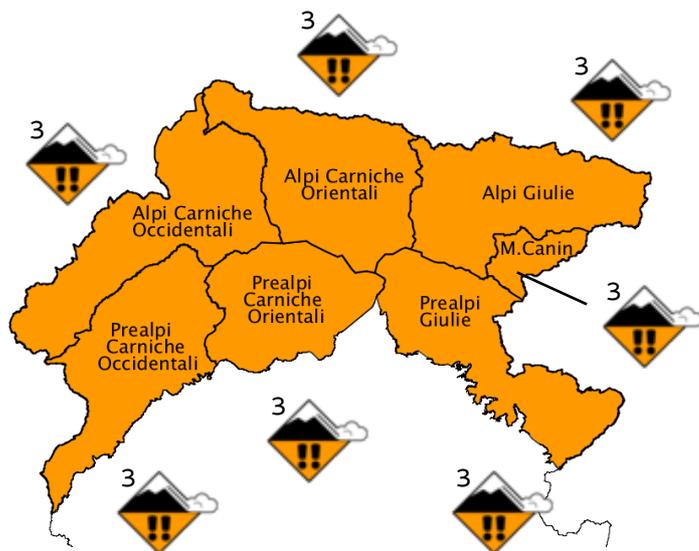

**Weather by OSMER - ARPA FVG:**

During the night, and until the early morning, moderate snowfall, then improvement.

**Snow cover conditions and avalanche danger:** During the night and until the morning, moderate snowfall is generally expected, more abundant in some cases, accompanied by winds from the NE. This will lead to the formation of new accumulations and make unstable ones – which are already present – less visible, especially at high altitudes. On the Alps and Prealps, avalanche danger will be 3 (considerable): small- to medium-sized natural avalanches are possible on steeper slopes. Chance of ground avalanches on steep grassy slopes, especially on sunnier ones, that could reach the valley floor in some cases. At all exposures, on steep slopes above the tree line, slab avalanches are possible, generally of medium size, even with the passage of single skiers-hikers. Danger will decrease below the tree line. Beware of the possible presence of glide cracks in the snowpack.

Forecast for Monday 01 February 2021, reliability: 70%

Avalanche danger 3 (considerable) due to the presence of unstable wind-blown snow accumulations.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 900 m  
T.average 1000: -1 °C  
T.average 2000: -3 °C

**Weather by OSMER - ARPA FVG:**

Variable skies.

**Snow cover conditions and avalanche danger:** Variable skies. Especially at high altitudes, the snowpack will be moderately consolidated, due to the presence of unstable accumulations of wind-blown snow. On the Alps and Prealps, avalanche danger will be 3 (considerable): small- to medium-sized natural avalanches are possible on steeper slopes. Chance of ground avalanches on steep grassy slopes, especially on sunnier ones, that could reach the valley floor in some cases. At all exposures, on steep slopes above the tree line, slab avalanches are possible, generally of medium size, even with the passage of single skiers-hikers. Danger will decrease below the tree line. Beware of the possible presence of glide cracks in the snowpack.
