

Situation of 03 March 2021 edition of the hours 14-next update 05-03-2021 hours 14, forecaster: GA

reliability: 90%

Chance of both slip and wet snow avalanches, especially during warm hours.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2500 m
T.average 1000: 5 °C
T.average 2000: 3 °C

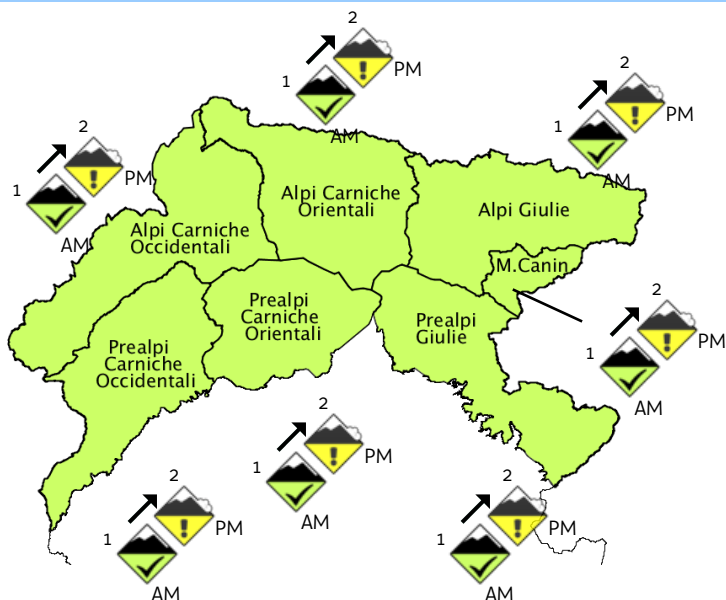

Weather by OSMER - ARPA FVG:
Mostly clear skies.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
PIANCAVALLO	1280	61	0	-0,2	10,3
TARVISIO	800	16	0	-4,1	11,6
SELLA NEVEA - LIVINAL LUNC	1837	412	0	0,6	7,4
RIFUGIO TAMAI - ZONCOLAN	1750	251	0	2,1	10,3
VARMOST M.TE SIMONE	1870	162	0	1,4	9,1

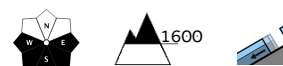

Snow cover conditions and avalanche danger: The snowpack will be generally stable and well-consolidated in the morning, while it will tend to weaken superficially during the day, due to rising temperatures and direct sunlight on southern slopes. Avalanche danger is 1 (low) in the morning, increasing to 2 (moderate) in the afternoon: on steep grassy slopes, especially on southern slopes, slip avalanches are possible, even of medium size. The areas where this phenomena is most likely to occur are those with the presence of glide cracks in the snowpack and during warm hours of the day, but on an isolated level, avalanches may also occur during other hours of the day. On sunny slopes, small- or medium-sized natural avalanches of wet loose snow are possible during warm hours. At the highest altitudes of northern exposures, and on extreme slopes, the triggering of small slabs may occur, mainly with high overload.

Forecast for Thursday 04 March 2021, reliability: 90%

Chance of both slip and wet snow avalanches, especially during warm hours.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 2400 m
T.average 1000: 4 °C
T.average 2000: 2 °C

Weather by OSMER - ARPA FVG:
Cloudy in the morning, more variable in the Pre-Alps during the day.

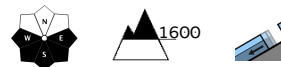

Snow cover conditions and avalanche danger: Good weather expected in the Alps, more variable in the Prealps. Avalanche danger will be 1 (low) in the morning, increasing to 2 (moderate) from the afternoon: on steep grassy slopes, especially on southern slopes, slip avalanches are possible, even of medium size. The areas where this phenomena is most likely to occur are those with the presence of glide cracks in the snowpack and during warm hours of the day, but on an isolated level, avalanches may also occur during other hours of the day. On sunny slopes, superficial natural avalanches of wet loose snow, generally small in size, are possible also during warm hours. At the highest altitudes of northern exposures, and on extreme slopes, be aware of areas with wind-blown accumulations, since small slab avalanches are still possible, especially with high overload.

Forecast for Friday 05 March 2021, reliability: 80%

Continued chance of isolated slip avalanches.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

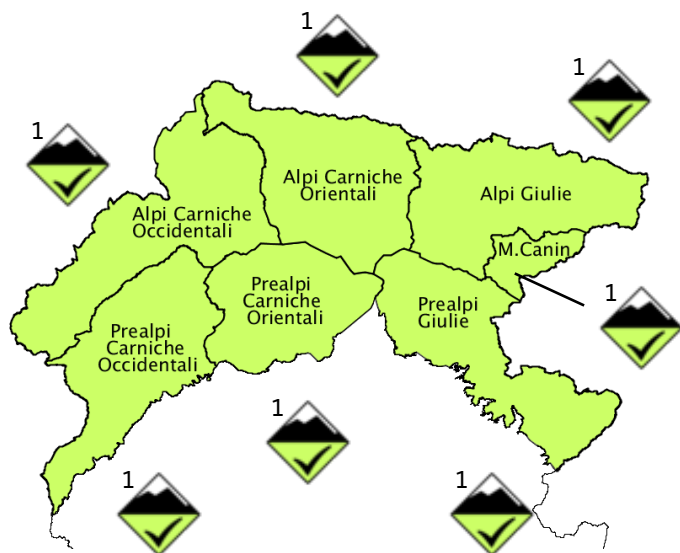

Thermal Zero: 1600 m
T.average 1000: 4 °C
T.average 2000: -2 °C

Weather by OSMER - ARPA FVG:
Variable cloudiness with the possibility of light rain and light snowfall above about 1000-1200 m.

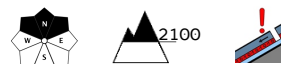

Snow cover conditions and avalanche danger: Cloudy skies with the possibility of light snowfall above 1000-1200 m. Falling temperatures. Avalanche danger will be 1 (low) throughout the territory: the possible light snowfall expected will not affect the avalanche danger. On steep grassy slopes, especially on southern slopes, isolated slip avalanches, even of medium size, will still be possible in areas with glide cracks in the snowpack. At the highest altitudes of northern exposures, and on extreme slopes, be aware of areas with wind-blown accumulations, since small slab avalanches are still possible, especially with high overload.

Forecast for Saturday 06 March 2021, reliability: 80%

Chance of small slab avalanches at highest altitudes of northern exposures.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

Thermal Zero: 500 m
T.average 1000: -3 °C
T.average 2000: -8 °C

Weather by OSMER - ARPA FVG:
Cloudy skies, NE winds at high altitudes and falling temperatures.

Snow cover conditions and avalanche danger: Expected cloudy skies, winds from NE at high altitudes and temperatures falling, with freezing temperatures at 500 m. If the quantities of new snow on Friday are negligible, the avalanche danger will be 1 (low) throughout the territory: at the highest altitudes of northern exposures in areas with the presence of old wind-blown accumulations and on extreme slopes, small slabs avalanches are still possible, mainly with high overload. On steep grassy slopes in areas with glide cracks in the snowpack, single slip avalanches, even of medium size, may still occur on an isolated level. Be aware of the risk of slipping on hard or icy surfaces, also facilitated by the presence of a thin layer of fresh snow.
