

Situation of 05 March 2021 edition of the hours 14-next update 08-03-2021 hours 14, forecaster: GA

reliability: 90%

Chance of isolated slip avalanches in the south and local small wind-blown slabs in the north.

Alpi Carniche occ., Prealpi Carniche occ., Prealpi Carniche orient., Alpi Carniche orient., Alpi Giulie, M. Canin, Prealpi Giulie

km/h

T max

Thermal Zero: 1600 m
T.average 1000: 4 °C
T.average 2000: -2 °C

Weather by OSMER - ARPA FVG:

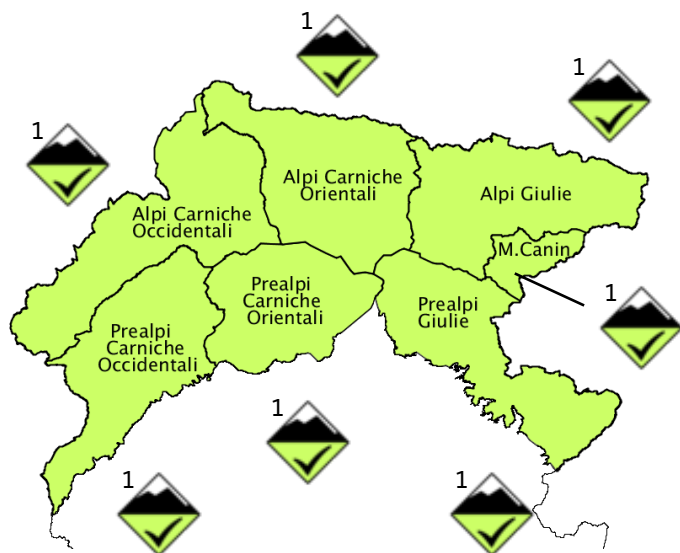

Variable cloudiness with possible weak snowfall above approximately 1000-1200 m.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
PIANCAVALLO	1280	60	0	-1,2	5,4
TARVISIO	800	16	0	2,7	11,6
SELLA NEVEA - LIVINAL LUNC	1837	412	0	-3,8	7,2
RIFUGIO TAMAI - ZONCOLAN	1750	247	0	-3,1	5,7
VARMOST M.TE SIMONE	1870	158	0	-3,9	6,5

Snow cover conditions and avalanche danger: The snowpack is generally stable and well-consolidated and, due to the expected drop in temperature, it will remain so throughout the day. Chance of light snowfall above 1000-1200 m from afternoon to evening. Avalanche danger is 1 (low) throughout the territory: on steep grassy slopes, especially on southern slopes, in areas with glide cracks in the snowpack, isolated slip avalanches, even of medium size, are still possible. At northern exposures, where the snow is still winter-like, on extreme slopes and especially at the highest altitudes, in areas with wind-blown accumulations, small triggered slab avalanches are still possible, on an isolated level, especially with high overload.

Forecast for Saturday 06 March 2021, reliability: 80%

Chance of isolated slip avalanches in the south and local small wind-blown slabs in the north.

Thermal Zero: 800 m
T.average 1000: -1 °C
T.average 2000: -7 °C

Weather by OSMER - ARPA FVG:

Chance of residual cloudiness in the morning, then mostly clear skies.

Snow cover conditions and avalanche danger: Variability is still expected in the morning. Cloudy skies during the day, with winds from NE at high altitudes, which may form local small superficial accumulations. Avalanche danger will be 1 (low) throughout the territory: on steep grassy slopes, especially on southern slopes, in areas with glide cracks in the snowpack, isolated slip avalanches, even of medium size, will still be possible. Chance of isolated new-snow avalanches from rocky walls and cliffs. At the highest altitudes, at northern exposures, and on extreme slopes in areas with wind-blown accumulations, small triggered slab avalanches will still be possible, on an isolated level, especially with high overload. Beware of the risk of slipping or falling on ice or on thin wind-blown accumulations formed on very hard smooth surfaces.

Forecast for Sunday 07 March 2021, reliability: 80%

Chance of isolated slip avalanches in the south and local small wind-blown slabs in the north.

Thermal Zero: 800 m
T.average 1000: -1 °C
T.average 2000: -4 °C

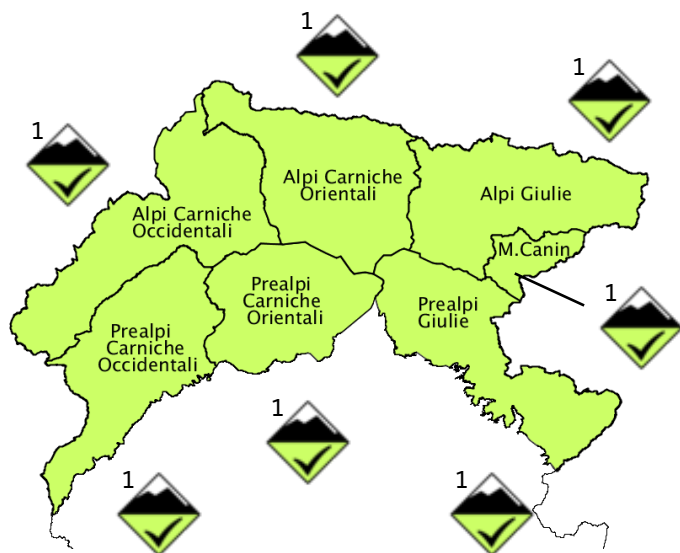

Weather by OSMER - ARPA FVG:

Clear or partly cloudy skies. Fall in minimum temperatures.

Snow cover conditions and avalanche danger: Clear or partly cloudy skies with freezing temperatures at 900 m. Avalanche danger will be 1 (low) throughout the territory: on steep grassy slopes, especially on southern slopes, in areas with glide cracks in the snowpack, at a very isolated level, small or large skid avalanches will still be possible. Continued chance of isolated new-snow avalanches from rocky walls and cliffs on southern slopes. At the highest altitudes, at northern exposures and on extreme slopes, in areas with wind-blown accumulations, small triggered slab avalanches will still be possible, on an isolated level, especially with high overload. Beware of the risk of slipping or falling on ice or on thin wind-blown accumulations formed on very hard smooth surfaces.

Forecast for Monday 08 March 2021, reliability: 80%

Chance of isolated slip avalanches in the south and local small wind-blown slabs in the north.

Weather by OSMER - ARPA FVG:

Slightly cloudy skies. Slight rise in maximum temperatures.

Snow cover conditions and avalanche danger: Cloudy skies expected, with a slight rise in maximum temperatures. The snowpack will be generally stable and well-consolidated. Avalanche danger will be 1 (low) throughout the territory: during the warmest hours of the day, isolated avalanches of wet snow from rock formations and rocky cliffs will be possible on southern slopes, also in areas with glide cracks in the snowpack. At a very isolated level, small- or medium-sized slip avalanches will still be possible on the steep grassy slopes of southern slopes. At the highest altitudes, at northern exposures and on extreme slopes, in areas with wind-blown accumulations, small triggered slab avalanches will still be possible, on an isolated level, especially with high overload.
