

Situation of 15 March 2021 edition of the hours 14-next update 17-03-2021 hours 8, forecaster: AM

reliability: 80%

**Avalanche danger 3 (considerable) in the Canin area, 2 (moderate) in remaining areas.**

Thermal Zero: 1200 m  
T.average 1000: 2 °C  
T.average 2000: -5 °C

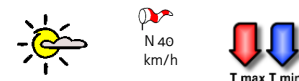

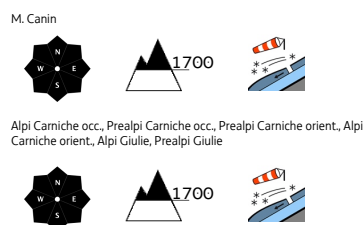

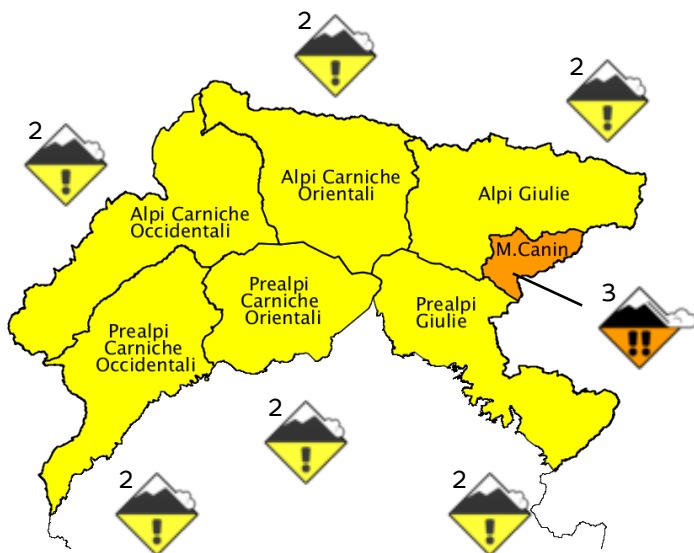

**Weather by OSMER - ARPA FVG:**  
Generally variable skies. Chance of snow flurries in the Alps during the afternoon.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
PIANCAVALLO	1280	60,0	10,0	-5,5	1,6
TARVISIO	800	11,0	7,0	-6,0	2,1
SELLA NEVEA - LIVINAL LUNC	1837	433,0	26,0	-7,2	-1,1
RIFUGIO TAMAI - ZONCOLAN	1750	277,0	15,0	-7,2	-3,8
VARMOST M.TE SIMONE	1870	169,0	18,0	-7,3	-5,4

**Snow cover conditions and avalanche danger:** Yesterday, 5 to 15 cm of new snow fell in the west, greater quantities in the east, especially in the Canin area. The wind formed new snowdrifts in hollows, gullies, and under ridges. In the Canin area, avalanche danger is 3 (considerable): beyond the treeline, in areas with snowdrifts, and at all exposures, triggered slab avalanches, even of medium size, can occur even with the passage of single skiers-hikers. From mountain sides and on very steep slopes, small- and medium-sized superficial natural avalanches are possible, both with loose cohesion and slabs. Throughout the rest of the territory, avalanche danger is 2 (moderate): on steep slopes located beyond the treeline, in areas with snowdrifts, chance of small triggered slabs, even with a low overload, mostly creating small avalanches. Small natural avalanches from mountain sides and along the steepest slopes are also possible.

Forecast for Tuesday 16 March 2021, reliability: 70%

**Avalanche danger 3 (considerable) in the Canin area, 2 (moderate) in remaining areas.**

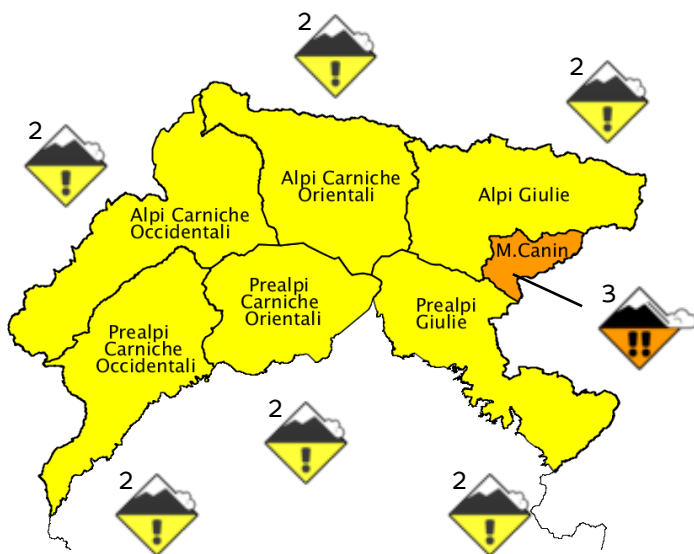

Thermal Zero: 1200 m  
T.average 1000: 1 °C  
T.average 2000: -7 °C

**Weather by OSMER - ARPA FVG:**  
Clear or partly cloudy skies.

**Snow cover conditions and avalanche danger:** Good weather, cold and sustained wind from the north. New snowdrifts will form at all exposures, with little involvement of the old compact and frozen snowpack. In the Canin area, avalanche danger will be 3 (considerable): beyond the treeline, in areas with snowdrifts, and at all exposures, triggered slab avalanches, even of medium size, can occur even with the passage of single skiers-hikers. From mountain sides and on very steep slopes, small- and medium-sized superficial natural avalanches are possible, both with loose cohesion and slabs. Throughout the rest of the territory, avalanche danger is 2 (moderate): on steep slopes located beyond the treeline, in areas with snowdrifts, chance of small triggered slabs, even with a low overload, mostly creating small avalanches. Small natural avalanches from mountain sides and along the steepest slopes are also possible. Beware of icy patches.

Forecast for Wednesday 17 March 2021, reliability: 70%

**Avalanche danger 3 (considerable) in the Canin area, 2 (moderate) in remaining areas.**

Thermal Zero: 1000 m  
T.average 1000: 0 °C  
T.average 2000: -8 °C

**Weather by OSMER - ARPA FVG:**  
Generally clear or partly cloudy skies.

**Snow cover conditions and avalanche danger:** Good weather expected with continued low temperatures. Snowdrifts present at high altitudes, which are usually easily recognizable by experts, must be avoided, since they can easily detach. In the Canin area, avalanche danger will be 3 (considerable): beyond the treeline, in areas with snowdrifts, and at all exposures, triggered slab avalanches, even of medium size, can occur even with the passage of single skiers-hikers. Natural avalanche activity is decreasing, mainly characterized by sluffs on very steep slopes. Throughout the rest of the territory, avalanche danger will be 2 (moderate): on steep slopes beyond the treeline, in areas with snowdrifts, chance of small triggered slabs, even with a low overload, creating mostly small avalanches. Small natural avalanches are possible. Beware of icy patches.

Forecast for Thursday 18 March 2021, reliability: 70%

**At high altitudes, chance of detachable snowdrifts, even with low overload.**

Thermal Zero: 800 m  
T.average 1000: -1 °C  
T.average 2000: -9 °C

**Weather by OSMER - ARPA FVG:**  
Generally clear or partly cloudy skies.

**Snow cover conditions and avalanche danger:** Continued good weather with low temperatures. Snowdrifts present at high altitudes, which are usually easily recognizable by experts, must be avoided, since they can easily detach. In the Canin area, avalanche danger will be 3 (considerable): beyond the treeline, in areas with snowdrifts, and at all exposures, triggered slab avalanches, even of medium size, can occur even with the passage of single skiers-hikers. Possible releases on very steep slopes in sunny areas. Throughout the rest of the territory, avalanche danger will be 2 (moderate): on steep slopes beyond the treeline, in areas with snowdrifts, chance of small triggered slabs, even with a low overload, creating mostly small avalanches. Possible releases on very steep slopes in sunny areas. Beware of icy patches.
